INDUSTRY DIVISION

Milton Eisen, Chief

ACKNOWLEDGMENTS—Many persons participated in the various activities of the 1972 Census of Manufactures. Primary direction of the program was performed by **Shirley Kallek**, Associate Director for Economic Fields, and **Melvin A. Hendry**, Assistant Director for Economic and Agriculture Censuses.

This report was prepared under the direction of **Elmer S. Biles**, Chief, Industry Division (until February 1975), and **Milton Eisen**, his successor. **Arthur W. Horowitz**, assisted by **John S. Berube**, was responsible for the overall management of the census and was the Industry Division's liaison officer with other divisions.

Program responsibility was shared by the following individuals, who participated importantly in the entire program: **Kenneth I. Hansen** and **Dale W. Gordon**, Census Durables; **Michael Zampogna**, Census Non-durables; **Ruth Runyan**, Census Subject and Special Reports; **Malcolm E. Bernhardt**, Current Durables; **Robert J. Nealon**, Current Non-durables; and **John P. McNamee**, Minerals. The names of the supporting statisticians in the commodity areas who made significant contributions are shown in the acknowledgment statements in the 81 individually published industry reports.

Edward A. Robinson made significant contributions to the basic economic concepts and content of the census. The mathematical techniques used in editing the data and sampling the respondents were developed by **Donald F. Clark**. **Robert E. Crowther** was responsible for the annual survey component of the census of manufactures. Computer programs were prepared under the direction of **Howard Hamilton**, assisted by **Mary H. Johnson**.

The mailing, collecting of data, and processing of administrative record information were conducted by the Economic Surveys Division under the direction of **Roger Bugenhagen**, Chief. Assistance was provided by **Samuel Schweid**, **Andrew Grieco**, **Charles Venters**, **Shirley Roberts**, **Robert Viehman**, **Jerry McDonald**, **Joel Richardson**, and **Sandra Katis**.

Forms design was performed in the Administrative Services Division, **Henry J. Husmann**, Chief. **Gladys Potts**, **Joyce Teague**, **Helen Hindt**, and **Margaret Swinton** made significant contributions.

Within the Publications Services Division, many individuals made significant contributions in the areas of publication planning and design, editorial review, composition, and printing procurement.

Clerical and data keying operations were performed in the Data Preparation Division at Jeffersonville, Indiana, under the direction of **O. Bryant Benton**, Chief, who was assisted by **Don L. Adams** and **Robert L. Allen**.

The geographic coding procedures were developed in the Geography Division under the direction of **Jacob Silver**, Chief, assisted by **Zigmund Decker**, **Terence McDowell**, **Silla Tomasi**, **Robert Hamill**, **David Christy**, **Kurt LeGait**, and **John Hawkins**. Computer processing was directed by **James R. Pepal**, Chief, Computer Services Division. **C. Thomas DiNenna**, **Jesse Verdeja**, and **Willie E. Clark** provided staff assistance.

Donald Young of the Economic Census Staff participated in the overall planning and review of the census operations.

Special acknowledgment is also due the many businesses whose cooperation has contributed to the publication of these data.

The statistics presented in this volume incorporate the subject and special report series MC72(1) and MC72(SR).

SUMMARY STATISTICS

GENERAL SUMMARY

Tables

1	General Statistics for All Operating Manufacturing Establishments: 1972 and Earlier Years	3
2	Manufacturing Employment: 1972 and Prior Census Years	4
3	General Statistics for Establishments by Industry Group and Industry: 1972 and 1967	6
4	Selected Statistics on Central Administrative Offices and Auxiliaries, by Major Industry Group of Establishments Serviced: 1972	22
5	Detailed Statistics by Major Industry Group: 1972.	23
6	Manufacturing Employment and Payroll for Geographic Areas: 1972 and Prior Census Years.	26
7	General and Comparative Statistics by Geographic Area: 1972 and Prior Census Years	47
8	General Statistics, by Employment Size of Establishment: 1972.	68

SUBJECT STATISTICS

MANUFACTURERS' INVENTORIES

Tables

1	Value of Inventories of Manufacturing and Distribution Sectors: 1972 and Earlier Years.	3-3
2	Value of Manufacturers' Inventories for Industry Groups and Industries: End of 1972 and 1971	3-4
3	Value of Manufacturers' Inventories for Divisions and States: End 1972 and 1971	3-12

EXPENDITURES FOR PLANT AND EQUIPMENT

Tables

1	Manufacturers' Expenditures for Plant and Equipment: 1972 and Earlier Years.	4-3
2	Manufacturers' Expenditures for Plant and Equipment by Industry Group and Industry: 1972 and 1967	4-4
3	Manufacturers' Expenditures for Plant and Equipment by Division and State: 1972 and 1967	4-11
4	Manufacturers' Expenditures for New Plant and Equipment by Division and State and Major Industry Group: 1972.	4-12

The review and issuance of the final industry and State publications were done on a flow basis. Errors were uncovered for a limited number of data cells after the final publications were issued. Because of the expense involved, corrections were made to the previously published data only if they resulted in a revision of 3 percent or more for an individual industry or 1 percent or more for a State. These corrections are included in the final volumes.

All errors identified in any phase of the review were carried to the computer file used to produce the final subject and special reports. Therefore, those reports represent the most accurate data available.

I. GENERAL BACKGROUND

1. THE ECONOMIC CENSUSES

General.—The economic censuses provide a comprehensive statistical profile of a large segment of the national economy. This program includes censuses of manufactures, retail trade, wholesale trade, selected services industries, mineral industries, construction industries, and transportation. In 1972, these censuses accounted for nearly 77 percent of the \$785 billion of national income originating in the private sector. The principal industry groups not covered were finance, insurance, and real estate; agriculture and forestry; communications; electric, gas, and sanitary services; and health and medical services, except for laboratories operating on a profit basis.

Uses and Users of Census Data.—The economic censuses are the primary source of facts about the structure and functioning of the economy and therefore provide information essential both for government and business. They furnish an important part of the framework for such composite measures as the national accounts. The census measures also provide weights and serve as benchmarks for current surveys of industrial activity and for indexes of industrial production, productivity, and price, all of which are essential in developing the general background for understanding particular economic situations.

There is widespread use of the economic censuses by manufacturers and distributors who need to establish measures of

their potential markets in terms of areas, kinds of business, and kinds of products; and by managers in various industries and trades who need facts for purposes of economic or sales forecasting, for analysis of sales performance, for the layout of sales territories, for the allocation of advertising budgets, and for the location of plants, warehouses, and stores. For these business purposes, census facts are invaluable. Likewise, trade and professional associations need census information to learn how their industry is changing; chambers of commerce and State and local governments need to understand the business structure and changes occurring in their areas. Business magazines and academic researchers rely on census facts as background for many of their articles.

Following every census, reports are purchased by thousands of business and other users; likewise, census facts are widely disseminated by trade associations, business journals, and the daily press; and census volumes are available in all the major public and college libraries.

History.—The first statistical survey which can be called an economic census covered the year 1809, when inquiries on manufacturing were included with the 1810 census of population. Although the results of this pioneer effort were unsatisfactory by modern standards,¹ continued interest in measure-

¹ For an appraisal of early censuses of manufacturing, see Meyer H. Fishbein, "The Censuses of Manufactures 1810-1890." National Archives Publication No. 63-22, June 1963. Government Printing Office.

INTRODUCTION—Continued

ment of the Nation's economic progress led to successive improvements during the 19th century. By 1890, the statistical standards and procedures followed in conducting the censuses were of a fully professional quality.

All of the decennial censuses from 1810 through 1940, with the exception of 1830, included questions on manufacturing. Inquiries on mining first appeared in 1840, and censuses of mineral industries were conducted decennially through 1940. Although some business-related data were

collected in 1840, the first census of business was taken for the year 1929. This included retail trade, wholesale trade, and construction; selected service trades were covered beginning with 1933. Dates of these and other economic censuses from 1809 are shown in table A.

Enterprise Statistics.—The coordinated collection and tabulation of comparable data for several sectors beginning with 1954 has permitted the Census Bureau to develop its enter-

INTRODUCTION—Continued

prise statistics program, which relates census company-level data to the establishment data. Thus, a measurement of the integration and diversification of the American enterprise system becomes available. Also, through the enterprise statistics program, it has become possible to link census establishment-based data on a modified basis to other statistical systems such as the Internal Revenue Service's "Statistics of Income" for corporations.

Legal Provisions.—Title 13 of the United States Code specifies the frequency of the censuses, the kinds of activities to be covered, the obligation to report, the penalties for failure to report, and the confidentiality of returns. It also authorizes

the use of sampling techniques in conducting censuses. As amended in 1964, Title 13 requires the economic censuses to be taken at 5-year intervals, covering the years ending in "2" and "7." The next censuses will cover the year 1977. The pertinent portions of Title 13 are quoted in appendix D.

2. CHARACTERISTICS OF THE INDUSTRIAL SECTOR

General.—In terms of the major industry divisions established in the national accounts, manufacturing is the largest sector of the economy. In 1972, manufacturing plants employed 19 million persons, 22 percent of the civilian labor force of 86.5 million. Over the past 20 years, as shown in table B, national

TABLE B. National Income by Industry Division for Selected Years

INTRODUCTION—Continued

income originating in manufacturing averages almost 30 percent of the total. In 1972, government and government enterprises surpassed wholesale and retail trade which historically was the next largest sector.

Cyclical Changes.—The need for frequent and comprehensive statistics on manufacturing derives as much from its sensitivity to cyclical influences as from its relative size. Cyclical changes in income originating in manufacturing tend to be relatively larger than in the economy as a whole, as can be seen in the movement from 1929 to 1933 to 1939 in table C.

Within manufacturing, durable goods industries accounted for about 60 percent of all manufactures during recent periods. This category tends to be more volatile than non-durable goods, generally accounting for a smaller percentage of all manufactures during periods of contraction and a larger percentage during periods of expansion. In the early thirties, for example, as shown in table C, durable goods manufacturing amounted to only about one-third of the total.

Geographic Distribution.—In the early and middle 19th century, manufacturing activity was concentrated in the

Northeast. Over the past hundred and twenty years, as shown in table D, there has been a steady decline in the proportion accounted for by the Northeastern States. Industry expanded into the North Central Region in the latter part of the 19th century and, in more recent years, displayed a marked growth in the South and West.

Size Distribution.—Manufacturing activity tends to be characterized by relative large-scale operations. While there are many small manufacturing plants, they account for a relatively small part of the total output of goods. As shown in table E, over half of the plants covered in the 1972 census had less than 10 employees and they accounted for less than 3 percent of the total value added by manufacture.

3. ROLE OF THE CENSUS OF MANUFACTURES

In the farm-oriented economy of the early 19th century, industrial statistics played a relatively small role in government policy formation. A few series on physical output of commodities originated either from private sources (flour, iron, and steel, etc.) or as a byproduct of tax collection or other government functions (liquors, beer, tobacco products, etc.). Other than these, the only sources of information on the manufacturing sector were the censuses of manufactures, then taken at 10-year intervals. Today, the need for industrial statistics has greatly increased, and the user finds a vast array of detailed information covering virtually every measurable aspect of industrial activity including employment, payrolls, hours worked, production, prices, inventories, orders, investment in structures, machinery, and equipment, and consumption of raw materials, fuels, and water. Many of these statistics are available at frequent intervals and on a timely basis. Sophisticated indicators of economic progress have also been developed such as price and production indexes, gross national product, and national income, published at monthly or quarterly intervals.

In this setting, the census of manufactures still plays an essential role since no other source provides such comprehensive and detailed information on the structure of the industrial sector.

The census obtains, for every manufacturing plant with one employee or more, data on its input of labor, materials, and capital, its output of products and services, its location, and the legal form of organization of the owning firm.² These facts are obtained in sufficient detail to permit classification by industry, by size of plant, by homogeneity of output and, where desirable, by type of operation, extent of vertical integration, kind of equipment, relationship to other plants of the same firm, and other characteristics.

² For 1967 and 1972, some of this information for 120,000 small companies was not obtained directly but estimated from administrative records. See the discussion of coverage of establishments in sections 4 and 6 below.

TABLE D. Employment in Manufacturing Establishments, by Region: 1849 to 1972

Year	United States	Northeast	North Central	South	West
Number of employees (thousands)					
1972	19,029	5,306	6,135	5,221	2,367
1967	18,492	5,573	6,059	4,553	2,305
1963	16,235	5,190	5,239	3,780	2,025
1958	15,423	5,242	5,017	3,382	1,779
1947	14,294	5,429	5,109	2,710	1,054
1939	9,527	3,879	3,184	1,852	612
1929	10,198	4,246	3,516	1,758	675
1899	5,077	2,629	1,474	793	181
1849	957	696	110	146	4
Percent of U.S. total					
1972	100	28	32	27	13
1967	100	30	33	25	12

— Represents zero.

TABLE E. Number of Manufacturing Establishments and Value Added by Manufacture, by Size Class of Establishment: 1972

(Cumulative percentage)		
Size class	Number of establishments	Value added by manufacture
All establishments, total	100.0	100.0
1 to 4 employees	35.9	1.1
1 to 9 employees	50.8	2.5
1 to 19 employees	64.8	5.4
1 to 49 employees	77.6	12.6
1 to 99 employees	89.0	20.9
1 to 249 employees	95.6	36.9
1 to 499 employees	98.2	51.4
1 to 999 employees	99.3	65.1
1 to 2,499 employees	99.8	79.3

General statistics (that is, total employment, payroll, production-worker employment, man-hours, wages, cost of materials, value of shipments, inventories, capital expenditures, and value added by manufacture) from the census of manufactures are published by industry, by area, by employment size of establishment, by degree of product specialization within plant, and by type of ownership. Information is supplied on the detailed industrial characteristics of each State and large standard metropolitan statistical area (SMSA); and overall measures of manufacturing activity are shown at the county and individual-city level provided there are at least 450 employees in manufacturing and the information can be published without compromising the confidentiality of individual company data. Since a significant amount of industry detail cannot be published for the 3,140 counties and county equivalents in the United States, a special computer tape on "Location of Manufacturing Plants" is available for data users. This tape includes the number of establishments in each of the 450 industries by county or county equivalent area, by employment size. Information such as this constitutes a periodic inventory of the geographic dispersion of the Nation's manufacturing economy that provides a benchmark for measuring the change in its structure.

The census of manufactures also provides benchmarks from which more frequent surveys can be developed on a sample basis. In fact, the present legislation specifying that censuses be conducted every 5 years authorizes an Annual Survey of Manufactures (ASM) on a sample basis during the intervening years. After each 5-year census, a new sample is drawn utilizing the characteristics recorded for each company in the census. The sample, constituting about one-fifth of the establishments but with complete coverage of all large ones, provides an annual updating of the census of manufactures in terms of broad measures of economic activity. It provides the same basic measures of economic activity of the plant such as employment, payrolls, value of shipments, value added by manufacture, as does the census of manufactures, but contains less detailed information on products, materials consumption, and equipment.³

The census of manufactures not only is a benchmark for many of the surveys conducted by the Census Bureau itself on a more frequent basis but also is the means of updating other indicators of economic activity. It provides very important information on the manufacturing segment used in the national income accounts. Census data on materials consumed and product output are basic to the manufactures sector of the

input-output studies of the Bureau of Economic Analysis. The information derived from the census of manufactures is also used to develop indexes of industrial production for census years. These indexes are used as benchmarks for the monthly Federal Reserve Board Index of Industrial Production—a key indicator of current economic activity. The census and ASM also provide benchmarks for hundreds of monthly and quarterly surveys of commodity output conducted by the Census Bureau, other government agencies, and by manufacturers' associations.

4. INDUSTRY AND PRODUCT CLASSIFICATION

Structure of the Standard Industrial Classification.—The basic classification system employed in the economic censuses is the Standard Industrial Classification (SIC). The SIC was developed for use in the classification of establishments (see "Establishment Basis of Reporting," page 9) by type of activity in which engaged. It covers the entire field of economic activities, subdivided as follows:

Industrial division	Title	Major groups
A	Agriculture, forestry, and fisheries	01-09
B	Mining	10-14
C	Contract construction	15-17
D	Manufacturing	20-39
E	Transportation, communication, electric, gas, and sanitary services	40-49
F	Wholesale and retail trade	50-59
G	Finance, insurance, and real estate	60-67
H	Services	70-89
I	Public administration	91-97
J	Nonclassifiable establishments	99

Below the major group level, the SIC provides for 3-digit groups and finally for 4-digit industries. To illustrate—

Division D.—Manufacturing

Major Group 20 Food and kindred products
 Industry group 202 Dairy products
 Industry 2023 Condensed and evaporated milk

The SIC is the responsibility of an intragovernmental technical committee headed by the Office of Management and Budget. The system is used by all Federal Government agencies engaged in the classification of establishments. To

³ Since the ASM is based on a sample, the cross-classifications by industry and by area are fewer than in the census of manufactures. At the U.S. level, statistics are published in the annual survey for practically all of the 450 industries. However, at the State and SMSA levels, statistics are published only for 3-digit and 2-digit industry groupings, respectively. At the county level, information is published for about 10 percent of the 3,140 counties and equivalent areas. These 300-odd counties are the larger ones in terms of manufacturing activity and account for about 80 percent of total manufacturing employment. Data for cities are shown for those cities having over 20,000 manufacturing employees.

facilitate comparison with Federal statistics and the filing of reports, many State and local governments and business concerns organize their own records along SIC lines.

The first SIC manual was issued in 1939. For the manufacturing sector, the nucleus of the manual was the census of manufactures industry classifications developed over a period of many years. A revised manual was issued for the manufacturing industries in 1945 which, with minor modifications, was used in the 1947 census of manufactures. For the 1954 census, the classification structure used in 1947 was again employed, with minor modifications. In 1957, the SIC system was extensively revised for manufacturing industries and the historical comparability of some data was seriously affected. This revision and its effects on census series are described in the introduction and appendixes to the 1958 census volumes. Minor revisions of the SIC between 1958 and 1967 introduced some 4-digit industry changes but none of them crossed 3-digit group lines. Another extensive revision of the SIC was completed in 1972 which also affected the comparability of industry data. The discussion of the revisions and the impact on comparability appears in appendix B, as well as in parts of each individual industry chapter.

Structure of the SIC Manufacturing Division.—For the manufacturing division, the 20 2-digit SIC Major Groups (20 to 39) are subdivided into 143 3-digit SIC Groups (201 to 399) and into 451 4-digit industries (2011 to 3999). While the SIC contains 451 industries, the Bureau of the Census has combined one small industry with another for a total of 450 industries.

Most of the 451 manufacturing industries are defined in terms of specific groups of related products. Usually the products are made of similar materials and by similar processes and are competitive. In determining the boundaries of product-defined industries,⁴ it is essential that each industry comprise a group of establishments whose output of products defining the industry (primary products) accounts for a relatively high proportion of the total shipments of the industry as well as of the total shipments of these primary products by establishments in all manufacturing industries. Some industries are defined in terms of the processes or equipment used regardless of the final product of the establishment. (Example: Industry 3361, Aluminum Foundries (castings). A small number of industries are basically defined by material used as well as final product of the plant. (Example: Industry 2521, Wood Office Furniture).

⁴ Frequently, business analysts and other data users look at a group of products from more than one point of view. For example, modern high-speed computers are classified as office machines. This describes the purpose of the product. In a physical sense, however, such computers would be described as electronic devices. Similarly, paper bags, wooden boxes, glass bottles, tin cans, and steel barrels may all be classified as containers or they may be individually grouped with other products of similar materials such as converted paper products, wood products, glass products, etc.

There are wide differences among industries in the extent to which the establishments classified in the industry (a) account for the total production of commodities "primary" to the industry, (b) produce products or services "belonging" to other industries (that is, secondary products), and (c) use similar materials or processes. While these variations are frequently construed to be shortcomings, the fact is that the limitations observed in the classification structure arise from the inherent complexity of our economic system and from the disparity in the methods of production among the individual producing units of which it is comprised. The data collected in the census of manufactures provide a statistical basis for a critical evaluation of the classification system; that is, for assessing the boundaries between industries, the growth and decline of industries, and the impact of technological change on the classification of industries.⁵

No general-purpose system of industrial classification can hope to satisfy all users of census data. Some business users will be interested primarily in data relating only to themselves and to their competitors in the production of a narrow range of products; others will wish data relating to all products, including complementary and substitutable products, competing in a particular market; others may wish data relating to the consumers of one or more types of materials. Some may be interested only in the data for plants producing a specific product; others only for those plants producing a "full line" of products. The large number of SIC industries provides the analyst with the "building blocks" for obtaining useful approximations, if not "clean" data, relevant to many of these problems. But, at best, a single general-purpose system of classification can only partially satisfy these diverse needs; a point is soon reached beyond which the adaptation of a system to serve one use somewhat better will reduce its ability, often disproportionately, to serve an alternative use.

Accordingly, users of data frequently regroup detailed SIC industries into broad groupings along lines different from those in the SIC 2- and 3-digit categories. The Federal Reserve Board for many years has made combinations to stress such criteria as durable, nondurable, consumers, producers, finished, intermediate goods, etc. Other public and private agencies also recombine the detailed classes. By and large, the 4-digit industries are susceptible to allocation to such categories, while the 2-digit SIC groups are not.

Subindustries.—To increase the usefulness or improve the editing of the data, the Census Bureau frequently has further classified the basic 4-digit SIC industries into "subindustries." This device is employed where there are wide disparities in the

⁵ See "Industry Classification and Sector Measures of Industrial Production" by James W. McKie, Bureau of the Census Working Paper No. 20, 1965, and "Historical Comparability of Census of Manufactures Industries, 1929-1958" by Harold T. Goldstein, Bureau of the Census Working Paper No. 9, 1959.

operating ratios of the plants in the industry because of differences among plants in the degree of vertical integration, technology, methods of distribution, geographic location, types of materials used, etc. This technique was used for about 61 manufacturing industries for editing purposes and many were regarded as significant enough to be used for publication: For example, the bakery industry (SIC 2051) is subdivided into wholesale bakeries, chain-store bakeries, home-service bakeries, and retail multioutlet bakeries, and many apparel industries (Group 23) are subclassified into manufactures, contractors, and jobbers.

To provide a further measurement of variations within 4-digit industries, the Bureau also subclassifies establishments by the degree to which they produce the primary products or specific classes of primary products of the 4-digit industry. This is in effect a subindustry classification based on degree of product specialization which is published in table 5A of the industry chapters.

Definition of Manufacturing.—As defined in the SIC, manufacturing is the mechanical or chemical transformation of inorganic or organic substances into new products. The assembly of component parts of products is also considered to be manufacturing if the resulting product is neither a structure nor other fixed improvement. These activities are usually carried on in plants, factories, or mills, which characteristically use power-driven machines and materials-handling equipment.

Manufacturing production is usually carried on for the wholesale market, for transfer to other plants of the same company, or to the order of industrial users rather than for direct sale to the household consumer. However, some manufacturers (for example, baking, milk bottling, etc.) sell chiefly at retail to household consumers through the mail, through house-to-house routes, or through salesmen. Some activities of a service nature (enameling, binding, platemaking, etc.) are included in manufacturing when they are performed primarily for trade; but they are considered nonmanufacturing when they are performed primarily to the order of the household consumer. On the other hand, some manufacturing industries include business firms which perform only the entrepreneurial functions of buying the materials and designing and marketing the product, but have the actual production done on contract (for example, apparel jobbers).

Auxiliary Units.—In addition to the production of goods and manufacturing services, manufacturing plants engaged in related and diverse supporting activities. These activities encompass the acquisition of materials to be processed, their movement into the manufacturing facility, their storage at the manufacturing site, the operation and maintenance of plant and equipment, the design of flow of work through the production process, and necessary arrangements for shipment of output to customers. Also included are a host of subsidiary

activities associated with the operation of the establishment as a manufacturing entity (for example, management and policy formation, product and market orientation, engineering and quality control, recordkeeping and accounting, physical security of plant and equipment, and the like). Such subsidiary activities may be performed by personnel located at the manufacturing facility or at an auxiliary unit serving one or more manufacturing locations of the same company. Where these activities are carried on at a different physical location or are performed for more than one plant, they are excluded from the figures for operating manufacturing establishments and are included in the data shown for central administrative offices and auxiliaries. (See the description of the questionnaire used for these establishments, Form NC-X6, in section 7, below.)

Marginal Activities.—The following types of activities, while having some of the characteristics usually found in manufacturing, are considered as nonmanufacturing and, therefore, are excluded from the census:

(a) Processing on farms when the raw materials are grown on the farm and the manufacturing activities (poultry dressing, milk and butter production, logging) are on a small scale without extensive use of paid labor. Also custom milling, egg hatching, cotton ginning, and similar activities closely associated with agriculture are excluded.

(b) Mineral preparation such as the crushing, screening, and concentrating of ores. However, mining performed as a secondary activity in conjunction with manufacturing is included in the census unless a separate report for the mining activity was filed; for example, stone and clay mining at cement, lime, and clay products plants.

(c) Custom work to the individual order of household consumers. Examples are custom tailoring, woodworking, lettering on monuments, setting of diamonds, and the making of orthopedic appliances.

(d) Repair and other service activities, except specified services performed "for the trade." Repair shops of railroads are also excluded.

(e) Production of coke for own use by establishments owned by public utility companies.

In the 1972 census, no attempt was made to measure the extent of manufacturing at locations which are not primarily manufacturing plants, such as retail establishments which sell most of their products on the premises directly to household consumers (retail bakeries,⁶ ice cream stores, etc.), or manufacturing by construction contractors at the site (for example, production of paving mixtures).

⁶ Separate data for retail bakeries with baking on the premises were included in the retail census publications, however.

Conversely, it is not unusual for manufacturing establishments to engage also in nonmanufacturing activities such as repair work, merchandising of products without further processing, and installation work. Ordinarily, these nonmanufacturing receipts are small in relation to the manufacturing activities and, therefore, it is not difficult to determine that the establishments should be included in the manufactures area. However, if the nonmanufacturing activities account for a significant proportion of total receipts of an establishment, the classification of that establishment into the appropriate major economic sector is more difficult.

In the 1972 economic censuses, an establishment engaged in a combination of manufacturing and merchandising was assigned either to the manufacturing or the trade industries depending on which of these activities was estimated to account for the larger share of its "value added" or "income produced." This criterion, even though based on approximation, was considered preferable to reported dollar volume of receipts from each type of activity in determining the primary industry, since manufacturing requires considerably more man-hours, salaries and wages, and capital inputs per dollar of receipts than either wholesaling or retailing. However, in classifying establishments engaged in manufacturing and also in mining, repair work, installation, construction, or other nonmanufacturing services, dollar receipts were used as the basis of classification because these activities require substantially comparable input per dollar of receipts.

Establishment Basis of Reporting.—The SIC is an establishment classification system, and the census of manufactures is conducted on an establishment basis. That is, a company operating establishments at more than one location is required to submit a report for each location; also, a company engaged in distinctly different lines of activity at one location is required to submit separate reports if the plant records permit such a separation and if the activities are substantial in size.

The requirement that distinct lines of activity at the same location be separately reported was selectively applied where the establishment produced and shipped significant amounts of products classified in different SIC industries. In widely varying degrees, this product overlap exists in many manufacturing establishments. Generally, the amounts involved are not significant enough to warrant the filing of separate reports, even if feasible. However, there are a number of locations at which large numbers of employees are engaged in each of two or more distinct lines of manufacturing as defined in the SIC. Frequently, companies organize their operations and their records separately where diverse activities are large (for example, with more than 100 employees in each line of activity) and choose to report them as separate plants. When they do not do so on their own initiative, the Census Bureau requests separate reports. For the most part, companies have

responded favorably, particularly for very large operations where failure to "split out" the different activities would significantly distort the relationship of the industry and product statistics. Not infrequently, though, the two groups of products were made on the same production lines by many of the same employees and could not be distinguished sufficiently in company records to provide establishment-type reporting.

SIC industry definition takes account of special situations where otherwise separately classifiable activities are frequently combined at one location. For example, in the lumber area the definition of industry 2421, Sawmills and Planing Mills, General, recognizes the situation that sawmills may include logging operations. Similarly, in the pulp and paper area, pulp-mills operated in combination with papermills are included in one report.

Coverage of Establishments.—The censuses of manufactures for 1947 to date have included establishments with one employee or more. Beginning with the 1967 census, reports were not obtained directly from all such establishments. Approximately 120,000 small single-unit manufacturing firms⁷ identified as having less than 10 employees were excused from filing reports. Under special arrangements which safeguarded the confidentiality of both tax and census records, limited data on payrolls, sales, and industry classification from the administrative records of the Social Security Administration (SSA) and the Internal Revenue Service (IRS) were made available to the Census Bureau for use in the 1967 and 1972 economic censuses. Estimates for data other than payrolls and sales for these small establishments were constructed from historical industry ratios. The effect on industry aggregates is slight in most industries; for manufacturing as a whole, they account for only 1.2 percent of the value added. Detailed product and materials data for these small establishments were not estimated; the entire value of product shipments and cost of materials was imputed to a "not specified by kind" category.

In the censuses of 1921 through 1939, establishments with less than \$5,000 value of products were excluded. For 1899 to 1919, the limit was \$500. The change in the minimum size limit to an employment basis in 1947 did not appreciably affect the overall comparability of earlier census figures, except for the number of establishments.⁸

A sample survey of manufacturing plants with no paid employees was conducted in conjunction with the 1958 census. While there were nearly 52,000 establishments in this category in that year, they accounted for only about one-quarter of 1 percent of the total value of shipments of all manufacturing industries. The proportion was higher for certain industry groups such as lumber and wood products and printing and

⁷ The characteristics of these firms are discussed below in section 15.

⁸ This point is discussed at greater length in the Introduction to the 1947 volumes.

publishing. Tabulation of IRS data for 1972 indicates that there were 104,000 tax returns completed as manufacturing that had no payrolls under SSA standards. These accounted for a little over one-quarter of 1 percent of the total value of shipments for all manufacturing industries.

As indicated above, report forms were not mailed to 120,000 very small establishments. These establishments were assigned the industry classifications to which they had been coded in the 1967⁹ Census of Manufactures if they had been in business for that year, or if they had begun in business after 1967 they were coded on the basis of brief descriptions of the general activity of the establishment as reported to the Social Security Administration. Where the description is incomplete or there are relatively fine lines of demarcation between industries or between manufacturing and nonmanufacturing activity, the code assigned to an establishment could differ from that which would have been assigned on the basis of more complete product information. Therefore, the total establishment count should be viewed as an approximation rather than a precise measurement. The counts for establishments with 20 or more employees are far more reliable than the total number of establishments.

Primary and Secondary Products.—As applied in the economic censuses, the SIC coding system operates in such a way that the definitions become progressively narrower with successive additions of numerical digits. There are 20 very broad 2-digit groups, 143 3-digit groups, and 451 4-digit industries. In addition, the Census Bureau has developed a product coding system based on the SIC, which contains 1,293 5-digit product classes and approximately 10,500 individual 7-digit products. (See "The Classification of Products and Materials" below.) The 7-digit products and 5-digit product classes are considered the primary products of the industry with the first four digits the same as the product code. Accordingly, an establishment is classified in a particular industry if its production of the primary products of that industry exceeds in value its production of products of any other single industry. The industry code assigned to the establishment is derived from a summation of values for 7-digit product codes to their 4-digit industry and the selection of the largest such value as the establishment's industry classification. However as mentioned earlier, the industry classification of an establishment may be determined not only by the products it makes but also by the processes employed or materials used in making those products.

While some establishments produce only the primary products of the industry in which they are classified, it rarely happens that all the establishments in an industry specialize to this extent. Therefore, the general statistics (employment, pay-

rolls, inventories, value added by manufacture, total value of shipments, capital expenditures, etc.) shown for an industry (tables 1 to 4 of the industry chapters in Volume II) reflect not only the primary activities of the establishments in that industry but also their activities of a secondary nature. The product statistics in tables 5A and 6B of the industry chapters represent the total output of specific products whether they are produced by establishments classified in the same industry as the product or not. For this reason, in relating the industry statistics in the industry chapters, especially the industry total value of shipments (tables 1 to 4), to the product statistics (table 6), the composition of the industry's output as shown in tables 5B and 5C should be considered.

The extent to which industry and product statistics may be matched with each other is measured by the two ratios which are computed from tables 5B and 5C. The first of the ratios, called the primary product specialization ratio, describes the proportion of product shipments (both primary and secondary) of the industry represented by primary products. The second, defined as the coverage ratio, is the proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

Degrees of Integration.—In many industries, establishments making products falling into the same industry category use a wide variety of processes and materials to produce them. Also, within the same industry classification based on end products, those establishments may be included which are vertically integrated and those which put only the finishing touches on an already highly fabricated purchased item. For example, in the refrigeration industry, there are instances of almost complete process integration in which the production of the compressor and condensing unit, electric motor, and even the castings for those intermediate products, as well as the stamping of the case and the final assembly, are all carried on at one plant. In other plants, the condensing unit, the motor, and the case may be purchased and merely assembled into the finished product.

In some instances, nonintegrated plants have been placed in separate industry categories from the integrated plants. In many industries, the census provides separate statistics on departmental operations or on the production of intermediate commodities made and used in the producing plant. When an industry includes plants which ship a significant proportion of their output to other plants of the same company, separate figures are usually shown on the interplant transfers.

These differences in the integration of production processes, types of operations, and types of materials used should be taken into account when relating the general items (employment, payrolls, value added, etc.) to the product and materials data. For those industries where the integrated type of operations is of consequence, that fact is pointed out in the explanatory text for the industry.

⁹ Establishments which were in the 1967 Administrative Record File would have been assigned industry codes from the 1963 Census of Manufactures.

Industry Code Resistance.—The production of many establishments is so evenly divided among two or more industry-determining product groups that the predominant groups (which can represent less than half of the total value if there are three or more groups) change from year to year. In the ASM, these plants are prevented from shifting back and forth among industries due to minor shifts in product mix, by the application of a "resistance formula" in assigning industry classifications.

A resistance formula of the ASM type was first used in the 1963 Census of Manufactures and again applied in the 1967 census. In the 1972 census, the formula was applied only to establishments included in the 1971 ASM sample panel with certainty (that is, included with a probability of "1"). In general, certainty cases included all establishments of companies with at least one manufacturing plant with 250 employees or more.

The formula gives approximately equal weight to the need for maintaining continuity in the establishment composition of an industry, thus improving the measurement of change and the need for reflecting the industry's exact status at a point in time.

In the 1972 census, the industry classification of certainty establishments was allowed to change from that assigned in 1971 under one of the following conditions:

- (a) The value of the 1972 primary products constituted 60 percent or more of its total value of product shipments, or
- (b) The value of the 1972 primary products, while less than 60 percent, was at least twice the value of products which had been primary in 1971.
- (c) The value of 1972 primary products, while not meeting either of the two prior conditions, exceeded the value of the 1970 primary industry's products in both 1972 and 1971 by at least 20 percent.

The Classification of Products and Materials.—In census industrial statistics, a commodity classification system based on the SIC is employed. The code numbers used in this system relate the commodity to the industry in which it is produced. For example, the 7-digit product code number 2023212 refers to canned evaporated milk. The first five digits of this code number, 20232, refer to the "product class" canned milk, and the first four digits, 2023, refer to the industry in which these products are made (the condensed and evaporated milk industry). The system is also applied to the coding of materials insofar as the first four digits are concerned; for example, the code number 024111 refers to whole milk used as a material, and the first four digits of this code number 0241, refer to the agricultural industry, dairy farms, where this product originates.

This SIC-based system is simpler than other systems for the coding of industrial products and materials used, since there is a direct numerical relationship between commodities and industries. Complications occur in the few SIC industries defined in terms of processes or equipment used as well as products made. As an example, women's sweaters are produced in knitting mills (industry 2253) and also in cut-and-sew shops (industry 2339). To retain the industry-of-origin concept, therefore, it is necessary to assign different product code numbers to women's sweaters, depending on where they are made.

The SIC-based commodity classification is used in the Census Bureau's entire industrial statistics program, including monthly, quarterly, and annual surveys, and also in the census of wholesale trade. The Bureau also publishes data on imports and exports in terms of SIC-based categories as well as the traditional Schedule B and TSUSA systems.¹⁰

5. GEOGRAPHIC CLASSIFICATION

Census Divisions and Regions.—In order to present census data at a level intermediate between the U.S. total and those for the individual 50 States and the District of Columbia, the Census Bureau has used regional groupings for over a century. Since the 1909 Census of Manufactures, the present nine geographic divisions have been used. Beginning with the 1939 census, the nine divisions were also classified into four geographic regions: Northeast, South, North Central, and West.

Not only are these groupings convenient for the summary presentation of census data below the U.S. level, but they are also essential to presenting a maximum of geographic information where the individual State data cannot be shown without disclosing figures for individual companies. (See section 22, "Confidentiality".) The relative importance of manufacturing among the regions, divisions, and States is shown in table F.

Standard Metropolitan Statistical Areas.—In addition to the data for the legally constituted geographic units (States, counties, and cities), all manufacturing totals are shown for approximately 263 standard metropolitan statistical areas (SMSA).¹¹ In the 1972 tables, detail for 2-, 3-, and 4-digit industries is shown for any SMSA when it would not disclose data for individual companies and the industry had at least 250 manufacturing employees. This is the same procedure as that used in the 1967 census. Prior to 1967, detail had not been shown for SMSA's with under 40,000 total manufacturing employment, and only industry group figures were

¹⁰Schedule B is the U.S. export classification while TSUSA is applied to imports.

¹¹See appendix F for a description of each SMSA.

shown for SMSA's with 40,000 to 190,000 employees. Between 1967 and 1972, a significant number of SMSA's were redefined in content or became new SMSA's. These changes are discussed in appendix E.

Standard metropolitan statistical areas are integrated economic and social units with a large volume of daily travel and communication between the central city (having 50,000 or more population) and outlying parts of the area. Each area (except in New England) consists of one whole county or more. An area may contain not only highly industrialized

counties but also adjoining counties which, though primarily residential in character, contribute significantly to the industrial counties' labor force and are socially and economically integrated with the central city. These areas were defined by the Federal Committee on Standard Metropolitan Statistical Areas for general-purpose use in presenting economic and social data. In the New England States, similar integration criteria have been applied in defining standard metropolitan statistical areas, but on a city and town basis because towns are regarded as the significant unit in this region of the country.

Note: The Flint, Mich., SMSA falls within the top 50 SMSA's but is excluded from this table to avoid disclosing figures for individual companies.

— Represents zero. *The definition of this SMSA changed for 1972. See appendix F for a description of each SMSA and changes in content.

The requirement that each SMSA consist of county units (except in New England) sometimes results in the inclusion in an area of a considerable amount of territory which would not ordinarily be considered "metropolitan," much less "industrial." It is recognized that metropolitan areas could be more accurately defined in terms of smaller area segments such as minor civil divisions, but the usefulness of areas so defined

would be limited by the fact that many types of economic and social data are available only on a county basis.

Each SMSA is designated by the name of the principal city of the area. In addition to the name of the principal city, the area title may include one or two additional city names.

Value added by manufacture in all SMSA's accounted for 78 percent of the U.S. total in 1972. The relative importance

of the 50 largest SMSA's in 1972 and their rankings in the 1967 and 1963 censuses are shown in table G.

Industrial Counties.—In addition to industry statistics for standard metropolitan statistical areas, table 7 of each State report, presents data by county for each industry group (2- and 3-digit) that had at least 450 manufacturing employees

and where it would not result in disclosure of figures reported by individual companies.

Cities with 450 Manufacturing Employees or More.—Summary totals and industry detail at the 2-digit level are shown for individual cities with 450 manufacturing employees or more, provided the data do not disclose information for individual companies.

II. METHODS

6. PLANNING AND PREPARATION

General.—The Census Bureau has an obligation to meet public needs for timely and reliable information while holding costs and the burden on respondents to a minimum. During the planning stages of each economic census, the advice of trade and professional associations, Federal and State government agencies, individual companies, labor unions, and research and educational organizations is solicited in an effort to reach both the users of data and the respondents who supply the basic figures. Simultaneously, studies of the problems encountered in the previous censuses are undertaken, and proposals to improve the methods of collection, processing, and tabulation are explored.

Mailing Lists.—Beginning with the 1954 economic censuses, the basic mailing lists have been obtained from Internal Revenue Service (IRS) and Social Security Administration (SSA) records.¹² These records were also sampled to develop statistics for retail and service establishments with no employees. After the 1963 censuses, it was decided to investigate the feasibility of making greater use of the data in the IRS-SSA records. This effort led, in the 1967 censuses, to the exemption of over 2,000,000 firms from the filing requirement, including 120,000 small manufacturers. Instead, census-type statistics for this group were developed from IRS-SSA records. Well in advance of the data collection phase of the censuses, plans for using these records for small employers were developed in close cooperation with those agencies. Specific procedures for this use and for assuring confidential treatment of individual tax returns were set forth in Executive Order No. 10911, dated January 17, 1961, and Treasury Decision No. 6547 of the same date. The basic records used were business income tax returns (IRS forms 1040C, 1065, 1120, and 1120S) and payroll tax returns (IRS form 941). The information obtained from these reports was the name and address, payrolls, and gross business receipts. In addition, an SIC indus-

trial activity code was assigned by use of the permanent SSA records which indicate the industry or kind of business of each employer. Other census statistics for these small firms were imputed, using industry average ratios to payrolls and sales.¹³

Since the 1967 procedure was successful, it was repeated in the 1972 economic censuses. In 1972, there was a concerted effort by the Census Bureau to improve the industry coding of the administrative record by mailing a nature-of-business inquiry to establishments whose industry codes could have been affected by the 1972 revision to the SIC. (A sample classification card is reproduced in appendix C.)

Planning the Content of Questionnaires.—As in previous censuses, the content of the 1972 questionnaires was developed in consultation with a large number of organizations and individuals, representing both the manufacturers who supply the basic data and those who use the resulting statistics. Those consulted included government agencies, individual firms, labor unions, the American Statistical Association, the American Economic Association, the American Marketing Association, the National Association of Manufacturers, and all national manufacturers' associations covering specific industries.

A special effort was made to obtain the advice of individual manufacturers and their trade associations as to the content of the sections of the report forms dealing with the output of specific products. Drafts of the proposed 1972 product sections were circulated among 800 trade associations and about 4,000 manufacturing companies, both large and small. These inquiries followed the pattern of the 1967 census inquiries, with the introduction of new product detail reflecting suggestions received by the Census Bureau after the 1967 canvass. Small items (those valued at \$5 million or less) were not retained in the list unless they were needed to simplify the classification of other products or were of strategic importance. The manufacturers and others consulted in this clearance procedure were requested to comment particularly as to whether

¹² The 1947 Census of Manufactures list was also obtained from the SSA.

¹³ As discussed elsewhere in this introduction, the amount of imputation introduced by this procedure was only about 1 percent of the overall totals.

the proposed detail was readily reportable from business records, and whether it represented the most appropriate set of items for the industry. A restriction was placed on proposals for additional detail; it was stipulated that the 1972 value of any new product category should exceed \$20 million.

The thousands of comments and suggestions received in this clearance procedure were analyzed by the census staff. Finally, a detailed account of the review procedure and the decisions reached was forwarded to the Office of Statistical Standards, Office of Management and Budget, along with the Census Bureau's recommendations for the content of the product sections.

The final review of the content was performed by the Office of Statistical Standards with the assistance of the Advisory Council on Federal Reports. The latter organization is a group of business executives representing a cross section of industries and various professions within companies such as controllers, economists, and market research directors.

7. REPORTING FORMS

A representative selection of the reporting forms used in the census is reproduced in appendix C. The uses of each of them are discussed below.

General Forms.—This group of forms was used in the economic censuses generally, either as companywide reports or as reports for establishments whose classification was not known precisely in advance of mailing.

NC-X1A, Report of Company Organization.—This companywide report and its companion forms NC-X1B and NC-X1C were used in the prec canvass of multiunit companies conducted in 1972. A more detailed account of their use is given in section 8, "The Mailing Lists."

NC-X2, Listing of Additional Establishments.—This form was mailed to all multiestablishment companies together with the 1972 Census of Manufactures forms to obtain a list of establishments that were acquired after the NC-X1A was filed. These plants were then classified, added to form NC-X1A, and mailed report forms. Plants under construction were requested to report expenditures put in place during 1972 and the total gross book value of assets at the end of the year.

NC-X3, General Schedule.—This questionnaire was designed to obtain information from small companies for which the industry code available in the SSA records was not precise enough to indicate which one of the standard census questionnaires should be mailed. The information provided on form NC-X3 was used to classify these companies by industry and tabulate their data in the appropriate census.¹⁴

NC-X6, Central Administrative Offices or Auxiliary Establishments.—Many multiunit companies maintain separate establishments to provide centralized administrative, management, or other supporting services for other establishments of the same company, but not for the general public or other companies. These establishments were asked to complete form NC-X6. The form contained questions on approximate employment for such functions as centralized administration, research and development, warehousing, and other auxiliary activities, and on the cost of research and development work performed by these nonmanufacturing establishments.

NC-K1, Company Summary Report.—Each multiunit company with 250 employees or more received a form NC-K1, Company Summary Report, along with the appropriate questionnaires for its establishments. The NC-K1 requested consolidated company totals for key data items, such as receipts, new capital expenditures, inventories, and fixed assets. In addition, each company was asked to distribute the 1972 employment reported on its establishment questionnaires by its IRS-SSA employer identification numbers (EI numbers) and to compare these totals to the figures reported on its Treasury Form 941 tax returns. This comparison provided assurance that all domestic establishments of each large multiunit firm and its subsidiaries would be included in the censuses. Form NC-K1 served this operational purpose and also provided essential data for the enterprise statistics program described above in section 1.

Census of Manufactures Forms.—The questionnaire reproduced in the appendix, form MC-36B, is typical of the 180 forms used for operating manufacturing establishments. Each of these forms was designed to be used for a specific group of industries. For establishments included in the Annual Survey of Manufactures sample, form MA-100 was substituted for the front sheet of form MC-36B and its companion forms, since the content was virtually the same and it was desired to maintain continuity of reporting in the ASM. Whether or not form MA-100 was used, the inquiries on the 180 forms were identical except for the detailed questions on products shipped, materials used, and miscellaneous topics such as operations performed, equipment used, and delivery of products.

Annual Survey of Manufactures Forms.—Form MA-100 is the establishment report used in the ASM since 1949 (with modifications). As mentioned above, this form was used in 1972 as the first sheet of the census of manufactures report for the establishments included in the ASM sample. The establishment's 1971 data were imprinted on the report form before mailing, thus aiding the respondent in following the instructions for the census. Item 9, "Quantity and value of products shipped and other receipts," on form MA-100 corresponds to item 18 on the census form MC-36B and its companion forms,

¹⁴The use of Form NC-X3 is also discussed in section 8, "The Mailing Lists."

the difference being that item 18 called for more detailed information on product shipments.

Other Related Forms.—Form CB-51J, "Manufacturers' Sales Branches and Sales Offices," which is reproduced in appendix C, is typical of the several forms used for these establishments in the census of business. The forms differed only in the kinds of products sold as listed in item 12. In item 5, line b provided verification of the classification of the establishment as a sales branch or sales office. If the line-b percentage indicated that more than half of the goods sold were not manufactured by the parent company, the establishment was reclassified into one of the merchant wholesaler categories.

MC-171, Department of Defense Establishments, and MC-D4, Penal Institutions.—These forms were used to collect information on government-owned and government-operated manufacturing establishments. They were used for two types of establishments: (1) Manufacturing facilities owned and operated by the Department of Defense, and (2) prison industries (Federal, District of Columbia, and State). The data were prepared with the cooperation of the Department of Defense, the Department of Justice, and the District of Columbia and State prison systems. For Department of Defense installations, information was provided on employment, man-hours, payrolls, cost, and value of work done, by industry group and by State. For prison industries, however, only product data were requested. The data are presented in a special report included in Volume I and are not included in the totals for operating manufacturing establishments.

8. THE MAILING LISTS

General.—As discussed in section 6 above, the basic lists for 1972 were obtained from IRS-SSA records, supplemented importantly by the inclusion of the ASM list of 68,000 establishments. Since the IRS-SSA lists consist essentially of the names and addresses of companies rather than establishments,¹⁵ it was necessary to follow separate procedures for multiunit companies (those operating at more than one location).

The Precanvass.—Multiunit companies were required to file at least one establishment report¹⁶ covering each location. In order to select the appropriate questionnaires, it was necessary

to determine in advance the nature of operations at each location. Beginning early in 1972, therefore, a "Report of Company Organization" (forms NC-X1A, NC-X1B, and NC-X1C)¹⁷ was obtained from firms known to be multiunits from previous census records. Form NC-X1A was mailed to all of the larger multiunit companies. Form NC-X1B was mailed to multiunit companies operating under 4 or less employer-identification numbers and having 13 or less operating establishments. Form NC-X1C was mailed to multiunit companies which were operating under one employer-identification number, having 4 or less operating establishments and a total employment of 100 or less.

All of these forms consisted essentially of a report on company affiliation and a list of the domestic establishments operated by the company. Before the forms were mailed, the company's establishments as identified in census records were prelisted. In the instructions for form NC-X1A, the respondents were asked to make any necessary corrections to this list. In addition, they were asked to supply descriptions of any new establishments not already listed, including their approximate size.

Large multiunit companies were segregated for special handling in the prec canvass because problems involving overlap and duplication were anticipated. Many of these companies were active in retail and wholesale trade as well as in manufacturing. The instructions for the prec canvass were reviewed with these firms in personal discussions with officials of their accounting departments, in order to make certain that the procedure was understood and the establishments properly described on form NC-X1A.

Initial Control File.—This file, consisting of about 10 million names and addresses of companies, was assembled from IRS-SSA records and other sources including the 1972 economic census records. For manufacturing, the ASM records were incorporated in the file.

Single-Unit Companies.—The mailing lists for single-unit companies (those operating at only one location) were developed from the initial control file by removing out-of-scope companies (those whose activities were not to be surveyed in the economic censuses) and those identified as multiunits in the prec canvass. A special survey of out-of-scope companies with more than 50 employees in selected industries was conducted to doublecheck their eligibility, and some names were added to the mailing list as a result. Single units with over 150 employees were mailed form NC-X1B to determine if they were multiunits.

The final step was to set aside the records of the small companies for which census-type statistics were to be developed from administrative records. The remaining records constituted the mailing lists for single-unit companies.

¹⁵The SSA records for multiunit companies identify "reporting units," which in many instances correspond to census establishments. The differences are such, however, that it was found necessary to obtain up-to-date lists of establishments as described in this section. Also, the Census Bureau concept of a company differs from the IRS-SSA definition, since the Census company includes all establishments under common ownership or control; in the IRS-SSA records, subsidiary corporations are often treated as independent companies.

¹⁶If two or more distinct lines of activity were carried on at one location, separate reports were obtained under some circumstances. (For a complete discussion, see "Establishment Basis of Reporting" in section 4, above.)

¹⁷These forms are reproduced in appendix C.

Classification cards (a sample form is reproduced in appendix C) were mailed to the administrative record cases if their historical code was involved in the 1972 SIC revision. Each establishment was requested to describe on the questionnaire the products manufactured or activity performed at their plant, the establishment was then classified according the response received. If a response was not received, the establishment was reclassified to the most probable industry.

General Schedule.—While the lists assembled in these ways were generally adequate in providing sufficient industry information to determine the proper form for mailing, a number of the records did not have precise industry information associated with them. Form NC-X3, "General Schedule," which is reproduced in appendix C, was mailed to all such companies. Since it was assumed that these companies were quite small, only a few key figures were requested. On the basis of the information reported, these reports were coded and included in the basic tabulations. If form NC-X3 indicated that the company was actually large, it was later requested to file one or more of the appropriate standard questionnaires.

9. GEOGRAPHIC AREA CODING

Accurate and complete information on the physical location of each establishment is required in order to tabulate the census data by standard metropolitan statistical areas, counties, and cities. As in previous censuses, the post office address and ZIP code of the establishment were not always accepted as defining the physical location, but respondents were required to describe the actual location in terms of street address, city, town or village, county, and State. For establishments located in rural territory, the name or number of the nearest highway was requested and the distance from the nearest town or other urban place.

In censuses prior to 1963, clerks assigned geographic code numbers to each establishment based on the description furnished by the respondent. This process was slow and required careful verification. Beginning with 1963, a computerized system was developed which assigned an area code number and a prefix symbol to the mailing address before the questionnaires were mailed. The prefix symbol indicated whether or not the mailing address was clearly acceptable as describing the physical location. If there was any question about its acceptability, the respondent's description was later carefully reviewed after the questionnaire was received. The assignment of tentative code numbers by the computer was based on extensive reference files containing nearly a million business names and addresses.

The geographic coding system used in the 1972 economic censuses was based on the 1967 system with some improvements and revisions. The major changes included updating and

expanding the address reference file and the use of new techniques in coding and unscrambling addresses against the reference file.

10. DATA COLLECTION

General.—Although the greater use of administrative records in 1972 substantially reduced the number of companies canvassed directly, there remained nearly 2 million which were required to file, including about 192,000 manufacturers. The assembly of several hundred different questionnaires into mailing packages, correctly labeled and coded, combined with the correct instruction booklets, was an extensive operation.

Instructions.—Several general instruction booklets were prepared to assist respondents in completing questionnaires for the 1972 economic censuses. In addition, separate detailed instruction manuals were printed for establishments in a few kinds of business and in certain mineral industries with peculiar reporting problems, as well as for manufacturing establishments reporting on the detailed standard forms.

Timing.—The bulk of the 1972 questionnaires was mailed by mid-January 1973 with a due date of February 15, about 2 months earlier than the corresponding due date for the 1967 censuses. The collection phase was completed in late July 1973, which was about 3 months earlier than the 1967 census.

Followup.—Companies which did not return their questionnaires by the due date had to be reminded that their returns were overdue. A reminder card was used for the first followup, and form letters were used in the four subsequent mailings. Two basic letter formats were used: one for multiunit companies that had returned questionnaires for some but not all establishments and the other for companies that had not responded at all.

In addition to the letters for the 3d, 4th and 5th followups, analysts made telephone calls to the large companies to help with reporting problems and to request that the forms be completed and returned.

The last followup letter was mailed in June 1973. Estimates based on data from administrative records were included in the census tabulations for the relatively small number which had not responded by the closeout date in July 1973. Thus, all companies and establishments included in the original mailing list (except those determined to be inactive during 1972) were represented in the final statistical results, either by actual returns or by proxy returns generated from administrative records. A special effort was made to obtain actual returns from all large firms, so that the volume of business represented by proxy returns was relatively very small.

11. DATA PROCESSING

General.—The editing,¹⁸ coding, and tabulation of data for the five million establishments represented in the 1972 economic censuses was a complicated task requiring extensive advance planning and careful coordination among the Census Bureau's organization subdivisions. Automatic data processing and other advanced techniques were used in all phases to a considerable extent.

Facilities.—In the mail collection phase, the questionnaires were returned by respondents to the Census office at Jeffersonville, Ind., where most noncomputer (that is, clerical) processing operations were performed. The Jeffersonville functions consisted mainly of preliminary screening of questionnaires, carrying on routine correspondence with respondents, keying data on a key-to-disk system, and transmitting the tape encoded data to Washington on a high-speed transmission system. The Washington staff handled computer operations and all operations in connection with the use of IRS and SSA records.

Preliminary Screening.—After they were checked in against control lists and assigned geographic codes, the questionnaires were reviewed clerically to see that they conformed to certain minimum requirements before further processing. In the case of multiunit companies, the sum of employment and payrolls reported on its establishment questionnaires was compared with the control totals reported on form NC-K1, "Company Summary Report." Questionnaires received from ostensibly single-unit firms were reviewed to ascertain whether they had become multiunits through merger or acquisition. All questionnaires were reviewed to see that the entries were legible and keyable and that entries appeared for a number of key items. For manufacturing establishments returns, the key items were payrolls and value of shipments. Questions arising in the screening operation were resolved by writing or telephoning the respondents. Complex problems involving multiunit companies were either handled by a special task force of experienced analysts in Jeffersonville or were referred to the Washington office.

Computer Editing.—All of the establishment records from the 1972 censuses of manufactures and mineral industries underwent computerized processes of screening and detailed testing of data. While many of these programs were newly devised in 1972 they were largely based on similar programs in use during previous censuses. Average values and tolerance limits for key

operating ratios (for example, cost of materials per dollar of shipments, payroll per employee, production-worker wages per man-hour, etc.) played a fundamental role in the editing process. However, more extensive testing and more sophisticated routines for adjusting data which failed the tests were incorporated into the 1972 programs. The need for computer editing may be judged by the fact that more than half of all 4-digit SIC industries had one or more data cells changed by more than 5 percent as a result of application of these programs.

In the 1972 census of manufactures, nearly 386,000 establishments were initially defined as being potentially in scope of manufacturing establishments. Approximately 55,000 were identified as having no activity in 1972 or actually out of scope of manufacturing. There were approximately 18,000 duplicate establishment records, which were removed. The ending file consisted of nearly 313,000 establishments engaged in manufacturing activities.

In sequence, the computer programs used included a Housekeeping and Screening Edit, a Coverage Control and Matching Edit, a Magnitude Edit, a General Statistics Edit, an Inter-card Inter-column Edit, a Product and Materials Edit, Duplicate Removal Programs, and various programs of referral and of aggregate testing. These programs are described in outline form below. Also included within this sequence were programs of geographic coding and of industry coding, subindustry coding, and SIC recoding which are described elsewhere in this Introduction.

The *Housekeeping and Screening Edit* was designed to inspect each record for the presence of basic information such as identification numbers, geographic codes, and source codes (that is, ASM, census of manufactures, or census of minerals). This program also included some simple data adjustments, such as the replacement of a missing total by a corresponding sum of detail.

The *Coverage Control and Matching Edit* was a system of programs which checked the consistency of clerically assigned codes with information reported on the ownership status of the establishment. For ASM establishments, the program included matching with the 1971 ASM record file to identify corresponding prior-year records.

The *Magnitude Edit* was designed to test the size of two key items—payrolls and value of shipments. For ASM establishments, these items were compared with the corresponding entries for 1971 and were accepted if satisfactory. If not accepted, the ASM records were channeled through the standard edit which compared payrolls to a historical employment-size code. Payroll figures passing the test were then used, in conjunction with cost of materials, in testing the value of shipments.

When failures in the magnitude tests were encountered, a fixed sequence of attempts to adjust the data were performed,

¹⁸In data processing, the term "editing" means the review of information collected on questionnaires or from other sources, with the objective of locating and correcting erroneous entries.

which included dividing a reported figure by 1,000 (a common error was the reporting of values in dollars rather than in thousands of dollars as requested), or replacing a total by a sum of detail where these differed.

More than 34,000 establishments were rejected from the combined output of the Housekeeping and Screening Edit, from the Coverage Control and Matching Edit, and from the Magnitude Edit. These rejects were clerically reviewed, corrected where necessary, and recycled back into the computer.

The *General Statistics Edit* tested key operating ratios and adjusted the record or flagged it for later attention if it failed the test. Fifty-two such ratios were assigned for use in testing census of manufactures records, and 41 ratios of change between 1971 and 1972 were used in testing the ASM reports. The tolerance limits and average values for these 93 ratios were based on the limits used for the corresponding tests in the 1967 census, with some correction and updating based on the 1971 ASM information.

In the presence of ratio failures, the computer program was designed to determine the component of the ratio which was most likely to have caused the failure. This was done by a process of inspecting other ratios containing each of the suspect components, and by computing an overall weighted-reliability index for each. The component with the lowest reliability index was judged to be incorrect. The computer then attempted to adjust the questionable figure by a process of "rounding" (multiplying or dividing by successive powers of 10), substitution of a total by a sum of detail, or by imputation based on one of the several ratios in which the suspect component was contained. After each such attempted adjustment, the new figure was accepted if it resulted in an improved reliability index.

In addition to the testing and correction of reported information, the General Statistics Edit was the vehicle for the imputation of data for the 120,000 establishments designated as administrative-record cases, as well as data for companies whose reports were not received at the time the data were tabulated. Imputation for all reasons, failure to report as well as administrative records, accounted overall for about 5 percent of the total value of shipments. Records were not rejected and removed from the computer tapes in the General Statistics Edit, but were flagged and printed out for review by an analyst whenever the computer made a large adjustment, found a large year-to-year change, or could not make an acceptable adjustment after test failure. Excluding administrative records, about 22,000 such cases were printed out for review and possible correction.

The *Inter-card-Inter-column Edit* was designed to test specific relationships among products, materials, and special inquiries. The record was flagged for inspection if the test failed; some 11,000 records were printed out for review from this edit.

The *SIC recoding program* recoded industry codes, product codes, and material codes, which were reported on the 1967 SIC system by means of reference tapes to the 1972 SIC system. Each establishment was assigned an old (1967) SIC industry code and a new (1972) SIC industry code based on the product mix reported in item 18 of the report forms. These industry codes were retained in the establishment record in order to tabulate and bridge the information. (See appendix B for a comparison of the old and new SIC's).

The *Product and Materials Edit* was performed after the data on products and materials had been extracted from the basic establishment records, assembled in product (or material) sequence, and recoded to the 1972 SIC code system. The edit was designed to inspect the reported quantities of production and of consumption after the corresponding values were tested and found acceptable. Unit values, in terms of dollar value per unit of quantity, were computed and ranked from highest to lowest. The most extreme values were removed, and the truncated data were used in the formulation of parameters (average deviation, central value, and upper and lower tolerance limits) which were printed out for review by analysts. This routine differs from those in other edits in that the parameters for editing were developed from the data at hand rather than from historic data or predetermined reasonableness limits.

The *Duplicate Removal Programs* were designed to identify and eliminate duplicate establishment records from the census. The sources of duplication were many; imputed records which were followed by late receipts of a report from the respondent were typical; multiunit companies having plants duplicated on their list of establishments; receiving or imputing full-year plant reports from the selling (predecessor) and acquiring (successor) companies; companies being imputed as single units which had reported as multiunits. A potential duplicate program was used to identify, for analysts' inspection, establishments which were in the same industry, same area, and approximately the same size. These programs resulted in the elimination of nearly 18,000 duplicate establishment records from the census file.

As in previous censuses, this preliminary round of computer editing and professional correction was followed by a more detailed review of establishment records. Among the devices used at this stage was an "outlier" program which printed out ASM establishment reports of dubious quality in terms of their internal consistency. The outlier program used some of the same ratios as the General Statistics Edit, but with parameters updated to reflect the characteristics of 1972, rather than earlier data. Records with one or more suspicious ratios were printed out for review. In addition, aggregates of records at the industry and the geographic cell level were inspected with ratio tolerance limits adjusted to reflect the number of establishments contributing to the cell.

12. COVERAGE AND ACCURACY

Since the list of companies obtained from IRS and SSA records was considered to be complete, no field coverage check was conducted. The prec canvass and other special procedures for multiunit companies described in section 8, "The Mailing Lists," and section 10, "Data Collection," were designed to secure complete lists of establishments, thereby amplifying the IRS-SSA company list. Control totals, in terms of employment and payrolls of multiunit companies, were also used to verify the completeness of establishment coverage. This procedure is discussed in section 11, "Data Processing."

Comparison of statistics tabulated from the census of manufactures with the Census Bureau's Current Industrial Reports series, or with data originating with other agencies was possible

in many instances, thus providing a further confirmation of completeness and accuracy. These figures range from employment and wage totals compiled by the Bureau of Labor Statistics to detailed commodity output figures published by the Internal Revenue Service, the Fish and Wildlife Service, and the Department of Agriculture. In the industry reports in Volume II, differences between the census of manufactures and other statistics are explained wherever possible. Census of manufactures comparability with broad measures such as national income, new capital expenditures, and production indexes are discussed elsewhere in this introduction. The Census Bureau's other procedures designed to improve the accuracy of the census data are discussed above in the sections on data collection and processing. Comments on the valuation of intracompany shipments by multiunit companies are included in section 15.

III. COMMENTS ON STATISTICAL MEASURES AND TABLES

(Explanations and definitions of the various measures of activity for which statistics are compiled in the census of manufactures are presented in appendix A. In the following sections, the limitations and other characteristics of some of these measures are discussed, the content of the statistical tables is described, and comparisons with other statistical series are presented.)

13. EMPLOYMENT AND PAYROLLS IN ADMINISTRATIVE OFFICES AND AUXILIARY ESTABLISHMENTS

In the industry chapters of Volume II, the data on employment and payrolls refer to operating manufacturing establishments and are so described. In the summary tables and the area reports, the employment and payrolls of central administrative offices and auxiliary establishments are included as well. However, whereas the operating establishments were coded to a 4-digit manufacturing industry, the administrative offices and auxiliaries were coded only to the 2-digit industry group of the establishments they served. In most of the tables with industry detail, the administrative offices and auxiliaries are shown as a separate industry group, but statistics for them by 2-digit industry appear in each volume in the General Summary tables. The relative importance of administrative offices and auxiliaries has increased substantially in recent years, because of a tendency to centralize functions formerly performed in manufacturing plants. Such functions include accounting (particularly where computerized), warehousing,

repair services, and miscellaneous others. As indicated in table H, this tendency was quite marked between 1954 and 1963 and between 1967 and 1972.

TABLE H. Employment in Central Administrative Offices and Auxiliaries and in Operating Manufacturing Plants: 1972 and Earlier Census Years

Census year	Employees in operating manufacturing establishments		Employees in central administrative offices and auxiliaries		
	Thousands of employees	Percent change from previous census year	Thousands of employees	Percent change from previous census year	Percent of total employment ¹
1972	19,029	+2.9	994	+19.8	5.2
1967	18,492	+14.0	830	+14.3	4.3
1963	16,235	+5.3	726	+20.6	4.3
1958	15,423	-1.4	602	² +32.9	3.8
1954	15,645	(NA)	453	(NA)	2.8

(NA) Not available.

¹ The total includes manufacturing establishments, central administrative offices, and auxiliaries.

² The apparent increase from 1954 to 1958 is believed to be somewhat overstated, because coverage of administrative offices and auxiliaries was more complete in the 1958 census.

Source: Census of manufactures.

14. MATERIALS

In addition to the total cost of materials which every establishment was requested to report, quantity and cost information was collected for approximately a thousand specific materials. About 350 of these were "complete coverage" materials; i.e., every industry that consumed appreciable quantities of the material was canvassed so that the data would represent at least 90 percent of manufacturing consumption. For the remaining materials, information on consumption was obtained on a more limited basis, generally only in those industries in which the materials were important inputs. Detailed consumption information was collected in the standard materials inquiry, in the product inquiries (for items which were produced and consumed in the same plant), or in a few instances in special inquiries. The resulting statistics are presented mainly in tables 6A and 7A of the industry chapters, Volume II.

Because American industry uses an enormous variety of materials, the choice of materials for which "complete coverage" consumption data (90 percent or higher) were obtained had to be strictly limited. The selection of a particular material for such coverage was based on the following criteria:

- (a) The importance of the material as measured by the total value of U.S. consumption of the material;
- (b) The percentage of total consumption accounted for by manufacturing establishments;
- (c) The availability of consumption information from manufacturers' records, and
- (d) In certain instances, other factors such as the strategic importance of the material or the availability of historical data on the use of the material.

The materials included on a limited-coverage basis were chosen not only because they constituted important inputs for particular industries but frequently because they provided information necessary to classify plants by SIC industry. In using the detailed data on materials consumed which appear in table 7A in the industry chapters of Volume II, the following limitations should be noted:

- (a) Materials were reported for the establishment as a whole and no attempt was made to ascertain how much of the material was used in each of various products. Thus, the industry totals appearing in table 7A represent consumption in secondary products as well as primary products of the industry represented. The extent of secondary production is measured by the specialization and coverage ratios shown in table 5B of the industry chapters.
- (b) Attention should be paid to the codes ending in "000" and captioned "materials, parts, containers, and

supplies, not specified by kind." The amounts appearing on these lines represent imputed totals for establishments whose statistics were developed by use of administrative records, and totals for other establishments which failed to report their consumption in specific terms. Thus, for most industries, the specific categories are understated. A judgment on the statistical significance of the understatement for each industry may be made on the basis of the relationship of the value shown for the "not specified by kind" (code 000) line compared with the total of materials, components, parts, containers, and supplies for the industry.

(c) Establishments consuming less than a specified amount of material were not requested to report consumption of the material separately. For the majority of individual materials, the minimum amount was \$5,000. The use of this cutoff is not believed to have had a significant effect on the totals.

(d) A total of "not elsewhere classified" (n.e.c.) material code 970099 was collected on most forms and is published for each industry. This represents the total cost of materials for an industry for which no material items were prelisted on the form. Survey MA-131, 1972 Supplemental Survey of Materials Consumed, a sample survey of 141 industries, was conducted in 1972 to provide material consumption estimates for the cost of materials reported in material code 970099. Results of this survey are shown in chapter 5, Materials Consumed.

15. VALUE OF SHIPMENTS BY MULTIUNIT COMPANIES

General.—Except for a few industries as indicated in appendix A, the respondents were instructed to report net selling values, f.o.b. plant, after discounts and allowances and excluding freight charges and excise taxes. Multiunit companies were instructed to report for each establishment as if it were a separate economic unit and, in particular, to report interplant transfers at their full economic value, including not only the cost of production but also a reasonable proportion of company overhead and profits. Since there is no advertising or other selling cost involved, it would be expected that the value per unit of such transfers would be less than that for commercial sales. The plant receiving the transferred goods was instructed to include them in its cost of materials, valued as at the shipping point plus the cost of freight and other handling charges.

In the case of goods transferred to sales branches, or sold through separate sales offices, the implication of the "f.o.b. plant" instruction is that the value is at a somewhat lower level than the final invoice value, because the cost of selling (mainly the cost of operating the sales branch or office) is excluded.

In practice, there is reason to believe that these instructions were not followed by all companies. In a recordkeeping practices study of 54 multiunit companies conducted a few years ago, it was found that about half of them had reported interplant transfers of semifinished products at commercial or market prices, which tend to be somewhat higher than the "cost plus overhead and profit" requested in the census instructions. In the case of finished products transferred to separate selling organizations, half of the companies interviewed valued the products at their final or invoice price, which again would be somewhat higher than the "f.o.b. plant" transfer value requested. It appears from this study and other observations that the value of shipments of products reported by multiunit companies tends to be overstated. For products characterized by a substantial amount of interplant shipments, separate quantity and value figures were requested on the census forms. Data on these shipments, the unit value of which is less accurate than the unit value for shipments outside the company, are presented separately in table 6A in the industry chapters of Volume II.

Individual Products.—In the 1972 census program, information was collected on the output of approximately 10,500 individual product items.²⁰ The term "product" as used in the census of manufactures represents the finest level of detail for which output information was requested. Consequently, it is not necessarily synonymous with the term product as used in the marketing sense. In some cases, it may be much more detailed, and in other cases, it is more aggregative. For example, pharmaceutical preparations were reported in terms of 160 products, while canned meats was a single product. Frequently, large aggregative values at the product level indicated that detailed production figures were available from other government sources or reliable private surveys.

Some 5,500 of the product items were listed separately on the 1972 census report forms. Data for the remaining 5,000 products were obtained in the monthly, quarterly, or annual commodity surveys comprising the Current Industrial Reports series of the Census Bureau. Totals for the year 1972 for these items as derived from the commodity surveys are shown in the "product shipped" table (table 6A) in the industry chapters of Volume II together with the tieline total value collected in the census for reconciliation.

Typically, both quantity and value of shipments information was collected. However, if there was no meaningful physical quantity measure that could be reported by manufacturers, only value of shipments was collected. For products which are used to a large degree within the same establishment as materials or components in the fabrication of other products, total quantities produced and often the quantities con-

sumed within the plant were collected. Typically, the information on production was also collected for products for which there are significant differences between total production and shipments in a given year because of wide fluctuations in finished goods inventories. Alternate measures of output of products, such as value of work done for products with long production cycles, were used as appropriate and feasible.

Classes of Products.—For the purpose of summarizing the product information, the separate products were aggregated into classes of products which were, in turn, grouped into all primary products of each industry. The code structure used is a 7-digit number for the individual product, a 5-digit code for the class of product, and a 4-digit code for the total primary products in an industry (see section 4 for application of coding structure to the assignment of SIC codes for establishments).

The 10,500 product items in the 1972 census (including products from the Current Industrial Reports program) were grouped into approximately 1,293 separate classes. Products were grouped into product classes to bring out significant differences in the broad types of products within a 4-digit industry. General similarity of the kind or purpose of the products or of the manufacturing processes, type of markets, or of materials used, were the basis for product combinations. The economic significance of the class was also taken into account; residual products of an industry were grouped when the products were not sufficiently significant in dollar value to warrant separate classes.

As a result of the increased number of respondents included in the product-class shipments totals, these categories lend themselves to many more cross tabulations than do the 7-digit products, without disclosing information about the operations of individual companies. In the industry chapters of Volume II, table 6B provides information on the value of shipments of product classes by State; and table 5C, by industry of the establishment producing them. The latter table is the best vehicle for showing the primary and secondary product mix of an industry, as well as the interrelationship between the 4-digit industry value of shipments and the 4-digit product group value of shipments. In table 5A the product class is used to provide finer industry-type general statistics by classifying establishments within an industry according to the degree to which they specialize in producing a specific class of products.

The class-of-product concept was incorporated by the Census Bureau into its own program with the 1947 Census of Manufactures after it developed the technique in the compilation of World War II production statistics. Product classes formed the basis of collecting product information in the annual survey of manufactures when that survey was initiated in 1949. The classes have been revised over the succeeding years to improve the balance and significance of product combinations within each industry and to keep abreast of the growth and decline of products.

INTRODUCTION—Continued

Effect of Use of Administrative Records on Product Data.—As noted elsewhere in this Introduction, 1972 census statistics for about 120,000 small manufacturers were developed by use of IRS and SSA records. Since the SSA records were coded only to the 4-digit SIC level, it was not considered feasible to estimate the product output of these small companies in terms of specific 5-digit product classes or 7-digit products. The total value of output was therefore coded to the 4-digit level and published separately in table 6A of the industry chapters of Volume II. In table I, page 18, these data have been summarized together with other undistributed 4-digit totals reported

by the larger companies. It will be seen from table I that the contribution of the small companies (administrative records) to product totals was of little importance except in lumber, furniture, and printing and publishing (groups 24, 25 and 27). The large companies (mailed establishments) which for various reasons reported only in terms of group totals were of somewhat more importance, accounting overall for about 3 percent of the total value of product shipments.

Nominally, the shipments of "small companies" as shown in table I represent the output of all establishments with less than 10 employees. Actually, only 35 percent of the value of

Note: These values represent product shipments, irrespective of the industry in which the products were made, and therefore differ from the industry group totals shown in the General Summary tables.

¹ The product shipment data for 1972 are tabulated on the 1972 (new) SIC basis; therefore data for 1972 and 1967 are not completely comparable for most of the major 2-digit groups due to the reclassification of products in the 1972 SIC revision across 2-digit groups. See appendix B for the products of 4-digit industries that were reclassified across 2-digit major groups.

² Estimates derived from administrative records. See text for further discussion.

³ In the 1972 SIC revision, the products for Major Group 19 were reclassified to Major Groups 34, 36, 37, and 38.

shipments of establishments with less than 10 employees was obtained from administrative records. This was due to several factors, the most important of which were—

(a) Many of the establishments with less than 10 employees were owned by multiunit companies and were covered in the mail canvass.

(b) Questionnaires were mailed to about 4,000 of the companies identified as having less than 10 employees. These were the small companies included in the ASM sample; the rest were included in the mail canvass to improve the estimates of general statistics, products, and materials.

(c) Some companies identified originally as having 10 employees or more turned out to have less than 10 employees in 1972.

Another factor tended to reduce the value of products not specified by kind attributed to small companies, thus affecting table 1 particularly. This was the fact that some 4-digit industries were represented by only one product category (an example is industry 3273, Ready-Mixed Concrete). Administrative-record estimates for products such as this were treated as specific information and not tabulated under the "not specified by kind" heading.

These factors taken together explain why the value of products "not specified by kind" attributed to small companies in table 1 is only 1.5 percent of the total, while the 159,000 establishments with less than 10 employees account for 2.5 percent of the total value added by manufacture in table E.

The value of product shipments accounted for by the small companies increased from 1.0 percent in the 1967 census to 1.5 percent in 1972. This is because considerably more establishments, initially identified as having less than 10 employees, actually had more than 10 employees in 1972.

The data for many of the specific 7-digit products shown in table 6A are understated by a proportion of the "not specified by kind" codes in each industry.

16. DUPLICATION IN COST OF MATERIALS AND VALUE OF PRODUCTS

The aggregates of the cost of materials and value of shipments figures for industry groups and for all manufacturing industries include large amounts of duplication since the products of some industries are used as materials by others. With some important exceptions, such as SIC 3312, Blast Furnaces and Steel Mills, this duplication is not significant within individual 4-digit industries. However, it is significant at the 2-digit and 3-digit industry level because these group totals often include industries which represent successive stages in

the production of a finished manufactured product. Examples are the addition of flour mills to bakeries in the total value of shipments of SIC Major Group 20 and the addition of pulp-mills to papermills in Group 26. Economists have estimated that the value of manufactured products exclusive of such duplication—the value of finished manufactures—tends to approximate two-thirds of the total value of shipments reported in the census of manufactures.

Because the amounts of duplication contained in the cost of materials and value of products figures cannot be measured with any degree of precision, caution is urged with their use when they are provided at the 2- and 3-digit industry group level.

Even where no significant amount of duplication is involved, value of shipments figures are of limited use as measures of the relative economic importance of individual manufacturing industries or geographic areas because of the wide variation in ratio of materials, labor, and other processing costs to value of shipments, both among industries and within the same industry. To a large extent, value added by manufacture does not have these limitations and is therefore a better measure for comparison.

17. VALUE ADDED BY MANUFACTURE

General.—Value added by manufacture is derived by subtracting the total cost of materials (including materials, supplies, fuel, electric energy, cost of resales, and miscellaneous receipts) from the value of shipments (including resales) and other receipts and adjusting the resulting amount by the net change in finished products and work-in-process inventories between the beginning and end of the year.²¹

Value added avoids the duplication in the value of shipments figure which results from the inclusion of the shipments of establishments producing materials and components along with the shipments of establishments producing finished products. It does not exclude purchased business services, as does the national income concept described below.²² Nevertheless, it is considered to be the best value measure now available for comparing the relative economic importance of manufacturing among industries and geographic areas.

²¹ For a few industries (for example, ship building) where value of work done is substituted for value of shipments, no adjustment is made for change in inventories. In a few other industries where value of production is collected, the inventory adjustment is made only on the basis of change in work-in-process inventories.

²² Collection of data on the cost of purchased business services at the plant level presents many problems. Advertising by multiunit companies, for example, is frequently charged at the company level and the cost either not allocated to plants or if allocated are only included as part of a broader company overhead category. National income data, on the other hand, are compiled in part from company rather than plant data, such as the IRS Statistics of Income in which advertising is presented as a separate cost item based on company reports.

INTRODUCTION—Continued

National income originating in the manufacturing sector, as developed in the national accounts maintained by the Bureau of Economic Analysis (BEA), is somewhat similar to value added in concept, but there are important differences. National income is the aggregate earnings of labor and capital which arise in the current production of goods and services in the manufacturing sector. Thus it measures the total factor costs incurred and is a more "net" conception of value added than that which it has been found feasible to compile in the economic censuses on an establishment basis. National income

excludes, in addition to cost of materials, such other costs as depreciation charges, State and local taxes (other than corporate income taxes), allowance for bad debts, and purchases of services from nonmanufacturing enterprises, such as contract costs involved in maintenance and repair, services of development and research firms, services of engineering and management consultants, advertising, telephone and telegraph expense, insurance, royalties, patent fees, etc.

In part, the national income estimates are prepared from company rather than establishment data. This method results

²This Major Group was recoded to Major Groups 34, 36, 37 and 38 in the 1972 SIC revision.

in the inclusion of some part of the net value added by non-manufacturing establishments of companies classified as being primarily manufacturing and, conversely, in the exclusion of some part of the net value added by manufacturing establishments of companies classified as primarily nonmanufacturing. It is believed that for manufacturing as a whole the net effect increases national income. In the Petroleum and Coal Products major industry group, nonmanufacturing activities of manufacturing companies are so significant that this is the one group in which national income exceeds value added, as shown in table J.

Historical Comparison.—Whatever changes have taken place in the relative importance of the costs included in value added but excluded from national income have been gradual. As shown in table K, the ratio between the two figures has been fairly constant over the past decade.

TABLE K. National Income Originating in Manufacturing and Value Added by Manufacture: 1972 and Earlier Years

Year	National income originating in manufacturing (bil. dol.) (1)	Value added by manufacture (bil. dol.) (2)	Column 1 divided by column 2

Sources: National income, survey of current business; value added, census of manufactures and annual survey of manufactures.

Reconciliation with National Income Components.—Figures are not available to permit a reconciliation of the estimates for value added in manufacturing and the national income originating in manufacturing for the current period. However, in 1957, the Census Bureau conducted a special survey, MC-D11, "Selected Costs and Assets of Manufacturing Establishments," which collected information on some of the costs included in value added for services purchased from other sectors or excluded from the national income estimates. These specific costs which accounted for about \$15 billion of the \$148 billion of value added in 1957 were maintenance and repairs, \$4.5 billion; insurance, \$.7 billion; property taxes, \$1.5 billion; rental payments, \$1.4 billion; and depreciation, \$7.3 billion. The residual value added, \$132 billion, was approximately \$16 billion in excess of national income of \$116 billion.

Table L presents an approximate reconciliation of national income and value added figures for manufacturing in 1957. The national income estimates for payrolls and other factor income in that year are based on the unrevised national income figures which are somewhat lower than the revised estimate appearing in table K. It should be noted that the labor costs included in national income and value added are reasonably close despite the fact that they are computed on a slightly different basis. If the proprietary and profit incomes of the company-based national income estimates are allocated to the establishments included in the census of manufactures, value added exceeds national income by \$35 billion of which \$15 billion is attributable to costs reported on survey MC-D11. Somewhat more than half of the \$35 billion excess represents the inclusion in value added by manufacture of purchased business services arising in other economic sectors; the remainder reflects conceptual differences arising from the inclusion, in value added, of indirect business taxes and depreciation which are excluded by definition from national income.

18. CAPITAL EXPENDITURES

Under this heading, manufacturers were instructed to report expenditures of the type chargeable to fixed assets accounts, for which depreciation reserves are normally maintained. Actual capital outlays during the year were requested, not the final value of equipment put in place or structures completed during the year.

The Census Bureau estimates of capital expenditures tend to be lower than those published in the joint Bureau of Economic Analysis-Securities and Exchange Commission survey. In addition to normal sampling variation, a major source of difference is to be found in the scope of the two series. Census data relate only to manufacturing establishments,

³ Supplements to wages.

⁴ Estimate based on figures reported in the 1958 economic censuses.

whereas the BEA-SEC series covers all establishments of manufacturing companies—nonmanufacturing as well as manufacturing. This factor is particularly important in the petroleum industry where company expenditures for developing new wells and new distribution facilities are ordinarily much larger than their capital expenditures at refineries. On the other hand, manufacturing establishments of companies engaged primarily in nonmanufacturing activities are excluded from

the BEA-SEC series but included in census figures. The BEA-SEC and census data for recent years are shown in tables M and N.

19. PLANT SPECIALIZATION

As discussed in section 4 above, the primary products of a plant are those which determine its industry classification; all other products are referred to as secondary products. The value of a plant's primary products in comparison to its total production is referred to as its degree of specialization. For each plant, two measures of specialization were computed: (1) A 4-digit primary product-specialization ratio, which is the sum of the values of all the plant's primary products divided by the sum of all its primary and secondary products; and (2) a 5-digit primary product-class specialization ratio, which is the sum of the largest 5-digit product-class value divided by the sum of its primary and secondary products (the miscellaneous receipts of the establishment were not included in these

² Excludes data for establishments under construction but not yet in operation.

TABLE N. Expenditures for New Plant and Equipment—
BEA—SEC Series and Census of Manufactures, by Industry
Group: 1972

Industry groups	BEA-SEC series ¹ (bil. dol.) (1)	Census of manu- factures, (bil. dol.) (2)	Column 2 divided by column 1
All manufacturing, total	31.4	24.1	0.77
Durable goods, total	15.7	12.7	.81
Primary metals	2.8	2.1	.75
Electric machinery	2.4	1.4	.58
Machinery, except electric	2.9	1.9	.66
Transportation equipment	2.5	2.7	1.08
Stone, clay, and glass	1.2	1.2	1.00
Other durables	3.9	3.4	.87
Nondurable goods, total	15.7	11.4	.73
Food and beverages	2.6	2.4	.92
Textiles7	1.1	1.57
Paper	1.4	1.3	.93
Chemicals	3.5	2.7	.77
Petroleum	5.3	1.2	.23
Rubber	1.1	1.1	1.00
Other nondurables	1.1	1.6	1.45

¹Source: 1974 Business Statistics, U.S. Department of Commerce, Bureau of Economic Analysis.

calculations). For example, assume that an establishment reported the following:

Total value of shipments and other receipts	\$1,000
Miscellaneous receipts (resales, etc.)	15
Total value of products shipped	985
32721 Concrete pipe products	100
32722 Precast concrete products	785
32730 Ready-mixed concrete	100

This plant would be coded into SIC industry 3272, Concrete Products, with a primary product specialization ratio of 90 percent ($\$885 \div 985$); it would be subclassified into the 5-digit class 32722, Precast Concrete, with a primary product class specialization ratio of 80 percent ($\$785 \div 985$).

In the 1972 census, selected general statistics (number of establishments, employment, payrolls, value added, cost of materials, value of shipments, and capital expenditures) were tabulated to primary product-class levels by assigning the plant totals to the principal 5-digit codes. These data are presented in table 5A of the industry chapters, Volume II. For most product classes, table 5A also provides general statistics for establishments specializing in the class to the extent of 75 percent or more.

Table 5A permits analysis of an industry in terms of the differences introduced by variation among establishments in the degree of specialization in the products of the industry or a subgroup (5-digit). For example, where the ratios among various statistics tend to be different for establishments specializing to different degrees in the products of the industry or in different product classes, the ratios for the industry as a whole would be significantly affected by changes in its product mix.

20. OPERATING RATIOS

Since all of the data collected in the census on establishment reports are interrelated, comparisons of the various measures of activity are of considerable interest. Beginning with the 1963 census, several ratios have been routinely computed and presented in the industry chapters of Volume II. For 1972 and earlier years, the following nine ratios were published for each 4-digit industry:

Payroll per employee
Production workers as percent of total employment
Annual man-hours of production workers
Average hourly earnings of production workers
Cost of materials per dollar of shipments
Cost of materials and payrolls per dollar of shipments
Value added per employee
Payrolls as percent of value added
Value added per man-hour of production worker

21. SUBJECT AND SPECIAL REPORTS SHOWN IN VOLUME I, SUMMARY AND SUBJECT STATISTICS

Volume I includes the seven subject reports and the six special reports presenting statistics which are not published

elsewhere. The following chapters were originally published in the subject series:

Chapter 1. General Summary.—This chapter, which appears in other volumes as well as Volume I, provides summary tabulations of data presented in greater detail in other census tables.

Chapter 2. Employment and Labor Costs in Operating Manufacturing Establishments.—This chapter presents the compilation of employment and labor costs for the United States as a whole and for each industry group and 4-digit industry. A more detailed description of the report and explanation of the terms employed is given in the introduction to the chapter.

Chapter 3. Manufacturers' Inventories.—These tables summarize the inventory data published in table 3 of the industry chapters of Volume II. A description of the statistics is given in appendix A.

Chapter 4. Expenditures for Plant and Equipment.—These tables summarize the expenditures data published in table 3 of the industry chapters of Volume II. A description of the data is given in appendix A and in section 18, "Capital Expenditures."

Chapter 5. Materials Consumed.—This chapter consists of a compilation of detailed statistics on consumption of materials, fuels, and electricity. These figures also appear in Volume II, Industry Statistics, as tables 7A and 7B for each industry.

Chapter 6. Gross Book Value of Depreciable Assets and Rental Payments.—This chapter presents the compilation of the gross book value of total assets and separate data for structure and machinery by industry group and industry. Rental payments for structures and machinery are also presented by industry group and industry. A more detailed description of the report and explanation of the terms employed is given in the introduction to the chapter.

Chapter 7. Selected Metalworking Operations.—This chapter presents the results of an inquiry concerning employment in metalworking plants such as foundry, forge shop, die casting department, and heat treating. The number of establishments in which these facilities are operated is presented, as well as the number of production workers engaged.

The following chapters were originally published in the special report series:

Chapter 8. Manufacturing Activity in Government Establishments.—This chapter presents data on manufacturing activities in selected types of government establishments in the United States. The statistics are not included in other census of manufactures tables, which cover only privately operated establishments. A more detailed description of the report is given in the introduction to the chapter.

Chapter 9. Concentration Ratios.—This chapter presents concentration ratios and other information on the share of industrial activity accounted for by the largest companies, both for the United States as a whole and for each of the 450 manufacturing industries. A more detailed description of the report and explanations of the terms employed is given in the introduction to the chapter.

Chapter 10. Type of Organization.—This chapter presents data for manufacturing establishments classified as to the legal form of ownership (corporate, individual proprietor, or partnership) and the establishment owner as a multiunit or single-unit company.

Chapter 11. Water Use in Manufacturing.—This chapter presents the results of a survey of the 1973 consumption of water in establishments consuming 20 million gallons or more annually. A more detailed description of the report and definitions of the terms employed, is given in the introduction to the chapter.

Chapter 12. Textile Machinery in Place.—This chapter presents the results of a 1973 survey on the number, by kind, of the various textile machines. Geographic breakdowns of the major textile operations are presented. The data are also broken out by industry for the various textile machines. A description of the statistics is given in the chapter.

Chapter 13. Fuels and Electric Energy Consumed.—This chapter consists of a compilation of detailed statistics on the consumption of fuels and electric energy from the 1971 Annual Survey of Manufactures. Data are presented on the quantity and costs of fuels and electric energy consumed for major groups and industries. A more detailed explanation of the estimates derived and terms employed are given in the introduction and the explanatory text for the chapter.

22. CONFIDENTIALITY

The Bureau of the Census is prohibited by law from publishing any statistics that disclose information reported by individual companies. In suppressing figures to avoid disclosing information of individual companies, geographic region and division totals are given precedence over individual States; States are given precedence over standard metropolitan statistical areas; standard metropolitan statistical areas over counties; and counties over cities. In tables showing industry detail, major industry group (2-digit) totals take precedence over industry group (3-digit) totals which, in turn, take precedence over individual (4-digit) industries. Similarly, in product tables, 4-digit product groupings take precedence over 5-digit product classes and the latter over individual 7-digit products.

Such order of precedence was used because (1) it was considered preferable to show regional data for an industry, even at the cost of withholding data for another (usually the least significant) State in a region, rather than to show all publishable data for the individual States and group the disclosure States throughout the United States in an "all other" category as was done in the 1939 and earlier censuses; and (2) by giving preference to industry-group statistics over individual industries within each State, the extent to which individual States can be compared within the SIC industry classification framework is greatly increased.

23. ABBREVIATIONS

The following abbreviations and symbols occur frequently in text, tables, and footnotes:

—	Zero
X	Not applicable
NA	Not available
D	Withheld to avoid disclosing figures for individual companies
n.e.c.	Not elsewhere classified
n.s.k.	Not specified by kind
lin.	Linear
equiv.	Equivalent
hp	Horsepower
kWh	Kilowatt-hours
SIC	Standard Industrial Classification
IRS	Internal Revenue Service
SSA	Social Security Administration
ASM	Annual Survey of Manufactures
CIR	Current Industrial Reports
BEA	Bureau of Economic Analysis
SEC	Securities and Exchange Commission

Other abbreviations, such as lb., gal., yd., doz., and bbl., are used in the customary sense. Where the term "tons" only is used, it refers to short tons of 2,000 pounds; where the figures are expressed in tons of 2,240 pounds, the unit of measure is specified as "long tons" or "gross tons."

Data in this publication may differ slightly from the industry and area reports previously published. These differences are due to corrections which were made for minor errors identified after the industry and area reports were issued. This report reflects these corrections.

Summary Statistics

General Summary Tables

TABLES	Page
1 General Statistics for All Operating Manufacturing Establishments: 1972 and Earlier Years	3
2 Manufacturing Employment: 1972 and Prior Census Years	4

(NA) Not available.

¹The figures for 1939 to 1972 include data for employees at manufacturing establishments who were engaged in distribution and in construction work. The extent to which data for such employees were included in the figures for earlier years is not known. In addition to the employment and payroll for operating manufacturing establishments, manufacturing concerns ordinarily reported separately for central administrative offices or auxiliary units (e.g., research laboratories, storage warehouses, power plants, garages, repair shops, etc.) which service the manufacturing establishment(s) of a company.

²The method of compiling these figures varied, as follows: **All employees:** For 1955 to 1972, figures represent the average of the number of production workers for the payroll period ended nearest the 12th of March, May, August, and November, plus all other employees for the payroll period ended nearest the 12th of March; for 1949 to 1954, they represent an average of all employees for the payroll period ended nearest the 12th of March, May, August, and November; for 1947, an average of 12 monthly figures for all employees; and for 1939 and prior years, the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). **Production workers:** For 1949 to 1972, figures are based on employment for the payroll period ended nearest the 12th of March, May, August, and November; and for 1947 and prior years, they represent the average of 12 monthly figures.

³For the period 1954 to 1972 value added by manufacture represents adjusted value added and for earlier years, unadjusted value added. Unadjusted value added is obtained by subtracting the cost of materials, supplies and containers, fuel, purchased electric energy, and contract work from the value of shipments for products manufactured plus receipts for services rendered. Adjusted value added also takes into account (a) value added by merchandising operations (that is, the difference between the sales value and cost of merchandise sold without further manufacture, processing, or assembly), plus (b) the net change in finished goods and work-in-process inventories between the beginning and end of the year. For 1849 to 1933, cost of contract work was not subtracted from value of shipments in calculating value added by manufacture.

⁴The figures for 1951 to 1972 include expenditures for plants under construction and not yet in operation. This information was not collected prior to 1951.

⁵These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

Footnotes continued on next page.

TABLE 1. General Statistics for All Operating Manufacturing Establishments: 1972 and Earlier Years—Continued

(Footnotes for table 1)--Continued

⁶The 1958 and subsequent years figures include establishments classified in industry 3273, Ready-Mixed Concrete, and establishments classified in industry 3599, Machinery, Except Electrical, N.E.C., that were engaged exclusively or almost exclusively in machine shop repair work. The data for such establishments are excluded from the figures for the period 1939 to 1957, but are included for 1929 and earlier years. The 1954 to 1966 figures include data for establishments engaged in the processing and distribution of fluid milk industry group 202, Dairy Products. These establishments were not included in the figures for earlier census years. In addition, beginning with 1954, the figures include data for industry 2411, Logging Camps and Logging Contractors, which were not included within the scope of the 1947 census. There were also a number of changes in the definition of manufacturing industries during earlier census years that affect the comparability of the historical series. Among the more important of these were the following: Figures for 1935 and later years exclude data for railroad repair shops and manufactured gas, which were included in 1899 to 1933 figures; the minimum size of establishment included for 1947 to 1966 was one employee; for 1921 to 1939, manufacturing establishments reporting value of shipments of \$5,000 or more were within scope, whereas for 1919 and earlier years the cutoff was \$500. (These changes in procedure have not appreciably affected the comparability of the historical data except for the figures on number of establishments.)

⁷The figures for 1939, but not for earlier years, have been revised on the basis of retabulation of the returns to exclude data for establishments classified as manufacturing in 1939 and prior years but classified as nonmanufacturing beginning with 1947. Value added by manufacture for 1939, prior to revision and on a basis comparable with 1937 and previous years, was \$24.7 billion.

⁸The 1939 figures for "all employees" were revised on the basis of estimates rather than by retabulation of the 1939 reports. The estimates were made in the following manner: For the number of employees, by multiplying the retabulated figure for number of production workers by the ratio of all employees to production workers computed from the unrevised 1939 statistics; for salaries and wages, by multiplying the retabulated wage figure by the ratio for salaries and wages also derived from the unrevised 1939 statistics.

⁹Not including data for salaried officers of corporations and their salaries and, therefore, not strictly comparable with figures for other years.

¹⁰These figures for 1899 and earlier years represent hand and neighborhood manufacturing operations.

TABLE 2. Manufacturing Employment: 1972 and Prior Census Years

(See appendix, Explanation of Terms)

¹The 1972, 1967, 1963, and most of the 1958 figures represent data for establishments located in the conterminous United States, Alaska, and Hawaii. However, when the 1958 figures were previously published they did not include data for Alaska and Hawaii since these areas did not achieve statehood until 1959. The addition of the 1958 Alaska and Hawaii figures to the previously published figures for major industry groups 26 and 29 would have resulted in a disclosure. Therefore, the 1958 Alaska and Hawaii data are excluded from these major groups but are included at the "all industries" level.

²Excludes ordnance and accessories. In the 1972 SIC revision, Major Group 19 was eliminated as a separate major industry group and its industries were reclassified to Major Groups 34, 36, 37, and 38.

TABLE 3. General Statistics for Establishments by Industry Group and Industry: 1972 and 1967

Note: In 1972, the payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent

E3--30 to 39 percent

E5--50 to 59 percent

E7--70 to 79 percent

E9--90 to 99 percent

E2--20 to 29 percent

E4--40 to 49 percent

E6--60 to 69 percent

E8--80 to 89 percent

E0--100 percent

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹The total value of shipments for industry groups (2- and 3-digit) and a few individual industries (4-digit) includes extensive duplication arising from shipments between establishments in the same industry classification.

²Establishments in this industry reported value of production instead of value of shipments. Consequently, the formula for computing value added by manufacture was modified to exclude any change in finished product inventories between the beginning and end of the year.

³Value added data include government-owned, contractor-operated plants which were estimated based upon averages reported for commercial establishments in prior years. Cost of materials data exclude government-owned materials furnished to government-owned, contractor-operated plants and include fuel and electricity purchased by or for

the establishments. Value of shipments data include a calculated value of shipments for government-owned, contractor-operated plants comprised of adjusted value added plus the cost of fuels and electric energy. Capital expenditures, new, include expenditures for plants under construction but not in operation. Capital expenditures of government-owned, contractor-operated plants are excluded from the totals for the industry.

⁴Includes expenditures for plants in operation and for plants under construction but not yet in operation.

⁵Government-owned, privately operated establishments did not enter into the calculation of "Primary product specialization ratio" or "Coverage ratio" as all other dollar receipts for these establishments were included in "Miscellaneous receipts."

⁶The value of shipments and cost of materials for this industry include substantial duplication; therefore, the specialization ratios and coverage ratios were not calculated.

⁷Relationships are not meaningful because of the predominance of receipts for contract and commission work on materials owned by others. Such receipts are treated as primary products for this industry.

⁸Establishments in this industry were requested to report value of work done instead of value of shipments. Consequently, the formula for computing value added by manufacture was not adjusted for any inventory change between the beginning and end of the year.

⁹In 1972 and 1967, in addition to the employment and payroll reported for operating manufacturing establishments, manufacturing concerns reported separately for central administrative offices or auxiliary units which serve the manufacturing establishments of a company (e.g., storage warehouses, power plants, research laboratories, garages, repair shops, etc.) rather than the general public. Separate reports were obtained if these units were at different general locations from the establishments served or if they serviced more than one manufacturing establishment. The figures shown for these units do not represent a separate industry but rather a balancing total for all manufacturing industries.

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The definitions of the standard consolidated areas and the standard metropolitan statistical areas are shown in appendix F.

²For the SCA listed in the table below (whose definition was revised for 1972), historical data do not include establishments located in the specified SMSA.

Standard consolidated area	Standard metropolitan statistical area
New York, NY-Northeastern New Jersey.....	Nassau-Suffolk in New York

Footnotes continued on next page.

TABLE 6. Manufacturing Employment and Payroll for Geographic Areas: 1972 and Prior Census Years—Continued

Footnotes for table 6 --Continued

³For the SMSA's listed in the table below (whose definitions were revised for 1972), historical data do not include establishments located in the specified areas. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition.

Standard metropolitan statistical area	County, parish, city, and town	Standard metropolitan statistical area	County, parish, city, and town
Abilene, TX.....	Callahan County	Louisville, KY-IN.....	Bullitt and Oldham Counties
Asheville, NC.....	Madison County	Lowell, MA-NH.....	Pelham town in Hillsborough County, NH
Augusta, GA-SC.....	Columbia County	Lynchburg, VA.....	Appomattox County
Austin, TX.....	Hays County	Wacon, GA.....	Jones and Twiggs Counties
Beaumont-Port Arthur- Orange, TX.....	Hardin County	Manchester, NH.....	Allenstown and Pembroke towns in Merrimack County, Derry and Londonderry towns in Rockingham County
Birmingham, AL.....	St. Clair County	Memphis, TN-AR-MS.....	Tipton County, TN; De Soto County, MS
Boston, MA.....	Boxford town in Essex County; Acton, Boxborough, Carlisle, and Holliston towns in Middlesex County; Bellingham, Foxborough, Franklin, Medway, and Stoughton towns in Norfolk County; Abington and Kingston towns in Plymouth County	Minneapolis-St. Paul, MN-WI.....	Carver, Chisago, Scott, and Wright Counties, MN; St. Croix County, WI
Bridgeport, CT.....	Derby city in New Haven County	Muskegon-Muskegon Heights, MI.....	Oceana County
Brockton, MA.....	Halifax town in Plymouth County. The following are included in historical data only: Stoughton town in Norfolk County, Abington and Hanson towns in Plymouth County	New Bedford, MA.....	Freetown town in Bristol County, Lakeville town in Plymouth County
Canton, OH.....	Carroll County	New York, NY-NJ.....	Bergen County, NJ; and Putnam County, NY. The following are included in historical data only: Nassau and Suffolk Counties, NY
Charleston, WV.....	Putnam County	Newark, NJ.....	Somerset County
Chattanooga, TN-GA.....	Marion and Sequatchie Counties, TN; Catoosa and Dade Counties, GA	Norwalk, CT.....	Weston town in Fairfield County
Colorado Springs, CO.....	Teller County	Oklahoma City, OK.....	McClain and Pottawatomie Counties
Columbus, GA-AL.....	Columbus city, GA. The following are included in historical data only: Muscogee County, GA	Orlando, FL.....	Osceola County
Columbus, OH.....	Fairfield and Madison Counties	Pittsfield, MA.....	Adams and Cheshire towns in Berkshire County
Denver-Boulder, CO.....	Gilpin County	Portland, ME.....	Freeport and Windham towns in Cumberland County; Old Orchard Beach town and Saco city in York County
Des Moines, IA.....	Warren County	Providence-Warwick-Pawtucket, MA-RI.....	Norton town in Bristol County, MA; Warwick city in Kent County, Scituate town in Providence County, and South Kingston town in Washington County, RI. The following are included in historical data only: Bellingham, Franklin, and Wrentham towns in Norfolk County, MA
Detroit, MI.....	Lapeer, Livingston, and St. Clair Counties	Richmond, VA.....	Charles City, Goochland and Powhatan Counties
Fall River, MA-RI.....	Dighton town in Bristol County, MA; Little Compton and Portsmouth towns in Newport County, RI	Roanoke, VA.....	Botetourt and Craig Counties
Flint, MI.....	Shiawassee County. The following are included in historical data only: Lapeer County	St. Joseph, MO.....	Andrew County
Hartford, CT.....	Marlborough town in Hartford County; New Hartford town in Litchfield County; East Hampton and Portland towns in Middlesex County; Colchester town in New London County; Columbia, Hebron, Stafford, Tolland, and Willington towns in Tolland County	St. Louis, MO-IL.....	Clinton and Monroe Counties, IL
Houston, TX.....	Waller County	Salt Lake City-Ogden, UT.....	Tooele and Weber Counties
Huntington-Ashland, WV-KY-OH.....	Greenup County, KY	San Antonio, TX.....	Comal County
Kansas City, MO-KS.....	Ray County, MO	Savannah, GA.....	Bryan and Effingham Counties
Knoxville, TN.....	Union County	Springfield, IL.....	Menard County
Lawrence-Haverhill, MA-NH.....	Atkinson, Hampstead, Kingston, and Windham towns in Rockingham County, NH; Amesbury and Salisbury towns in Essex County, MA	Springfield-Chicopee-Holyoke, MA-CT.....	Belchertown, Hatfield, and Southhampton towns in Hampshire County, MA
		Tallahassee, FL.....	Wakulla County
		Topeka, KS.....	Jefferson and Osage Counties
		Washington, DC-MD-VA.....	Charles County, MD
		Waterbury, CT.....	Southbury town in New Haven County
		Wichita Falls, TX.....	Clay County. The following are included in historical data only: Archer County
		Worcester, MA.....	Charlton, Uxbridge, and Webster towns in Worcester County

⁴For the SMSA's listed in the table below (whose definitions were revised for 1972), historical data do not include establishments located in the specified areas. Data tabulated under the new 1972 definitions differ by more than 5 percent from 1972 data tabulated under the old definition.

Standard metropolitan statistical area	County, parish, city, and town	Standard metropolitan statistical area	County, parish, city, and town
Albany, GA.....	Lee County	Montgomery, AL.....	Autauga County
Albany-Schenectady-Troy, NY.....	Montgomery County	Nashville-Davidson, TN.....	Cheatham, Dickson, Robertson, Rutherford, and Williamson Counties
Albuquerque, NM.....	Sandoval County	New Haven-West Haven, CT.....	Clinton and Killingworth towns in Middlesex County; Madison, Orange, and Wallingford towns in New Haven County
Allentown-Bethlehem-Easton, PA-NJ.....	Carbon County, PA	New London-Norwich, CT-RI.....	Hopkinton and Westerly towns in Washington County, RI; Old Saybrook town in Middlesex County, CT; Bozrah town in New London County, CT
Atlanta, GA.....	Butts, Cherokee, Douglas, Fayette, Forsyth, Henry, Newton, Paulding, Rockdale, and Walton Counties	Newport News-Hampton, VA.....	Williamsburg city, Gloucester, and James City, Counties
Baton Rouge, LA.....	Ascension, Livingston, and West Baton Rouge Parishes	Norfolk-Virginia Beach-Portsmouth, VA-NC.....	Nansemond and Suffolk cities, VA; and Currituck County, NC
Biloxi-Gulfport, MS.....	Hancock and Stone Counties	Patterson-Clifton-Passaic, NJ.....	The following is included in historical data only: Bergen County
Charleston, SC.....	Dorchester County	Rochester, NY.....	Ontario County
Charlotte-Gastonia, NC.....	Gaston County	Shreveport, LA.....	Webster Parish
Evansville, IN-KY.....	Gibson and Posey Counties, IN	Springfield, MO.....	Christian County
Fort Wayne, IN.....	Adams, De Kalb, and Wells Counties	Springfield, OH.....	Champaign County
Greensboro--Winston-Salem--High Point, NC.....	Davidson and Stokes Counties	Tampa-St. Petersburg, FL.....	Pasco County
Greenville-Spartanburg, SC.....	Spartanburg County	Texarkana, TX-Texarkana, AR.....	Little River County, AR
Huntsville, AL.....	Marshall County	Toledo, OH-MI.....	Fulton and Ottawa Counties, OH
Jacksonville, FL.....	Baker, Clay, Nassau, and St. Johns Counties	Tulsa, OK.....	Mayes, Rogers, and Wagoner Counties
Kalamazoo-Portage, MI.....	Van Buren County		
Lansing-East Lansing, MI.....	Ionia County		
Lexington, KY.....	Bourbon, Clark, Jessamine, Scott, and Woodford Counties		
Lima, OH.....	Auglaize County		

Footnotes continued on next page.

TABLE 6. Manufacturing Employment and Payroll for Geographic Areas: 1972 and Prior Census Years—Continued

(Footnotes for table 6)--Continued

⁵For the SMSA's listed in the table below (which were defined after the 1967 census), historical data are not available. The counties, parishes, cities, and towns which comprise the SMSA are listed on the right.

Standard metropolitan statistical area	County, parish, city, and town	Standard metropolitan statistical area	County, parish, city, and town
Alexandria, LA.....	Grant and Rapides Parishes	Long Branch-Asbury Park, NJ.	Monmouth County
Anchorage, AK.....	Anchorage Division	Melbourne-Titusville-Cocoa, FL.....	Brevard County
Appleton-Oshkosh, WI.....	Calumet, Outagamie, and Winnebago Counties	Modesto, CA.....	Stanislaus County
Battle Creek, MI.....	Barry and Calhoun Counties	Nashua, NH.....	Nashua city, and Amherst, Hudson, Merrimack, and Milford towns in Hillsborough County
Bristol, CT.....	Bristol city and Burlington town in Hartford County, Plymouth town in Litchfield County	Nassau-Suffolk, NY.....	Nassau and Suffolk Counties
Bryan-College Station, TX...	Brazos County	New Brunswick-Perth Amboy-Sayreville, NJ.....	Middlesex County
Burlington, NC.....	Alamance County	Owensboro, KY.....	Daviess County
Columbia, MO.....	Boone County	Parkersburg-Marietta, WV-OH.	Washington County, OH, Wirt and Wood Counties, WV
Danbury, CT.....	Danbury city and Bethel, Brookfield, New Fairfield, Newton, and Redding towns in Fairfield County; New Milford town in Litchfield County	Petersburg-Colonial Heights-Hopewell, VA.....	Dinwiddie and Prince George Counties and Colonial Heights, Hopewell, and Petersburg cities
Daytona Beach, FL.....	Volusia County	Poughkeepsie, NY.....	Dutchess County
Elmira, NY.....	Chemung County	Richland-Kennewick, WA.....	Benton and Franklin Counties
Fayetteville-Springdale, AR.	Benton and Washington Counties	Rochester, MN.....	Olmsted County
Florence, AL.....	Colbert and Lauderdale Counties	St. Cloud, MN.....	Benton, Sherburne, and Stearns Counties
Fort Myers, FL.....	Lee County	Santa Cruz, CA.....	Santa Cruz County
Gainesville, FL.....	Alachua County	Santa Rosa, CA.....	Sonoma County
Killeen-Temple, TX.....	Bell and Coryell Counties	Sarasota, FL.....	Sarasota County
Kingsport-Bristol, TN-VA....	Bristol city, and Scott and Washington Counties, VA; Hawkins and Sullivan Counties, TN	Williamsport, PA.....	Lycoming County
La Crosse, WI.....	La Crosse County	Yakima, WA.....	Yakima County
Lakeland-Winter Haven, FL...	Polk County		

⁶For the SMSA's listed in the table below (which were retitled for 1972), historical data is revised to the current definition in this table.

New title	Old titles
Dallas-Fort Worth SMSA.....	Dallas SMSA and Forth Worth SMSA
Northeast Pennsylvania SMSA.....	Scranton SMSA and Wilkes-Barre-Hazleton SMSA
Raleigh-Durham SMSA.....	Raleigh SMSA and Durham SMSA

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹The 1958 and subsequent years' figures include establishments classified in industry 3273, Ready-Mixed Concrete, and establishments classified in industry 3599, Machinery, Except Electrical, N.E.C., that were engaged exclusively, or almost exclusively, in machine shop repair work. The data for such establishments are excluded from the figures for the period 1939 to 1957, but are included for 1929 and earlier years. The 1954 to 1972 figures include data for establishments engaged in the processing and distribution of fluid milk, industry group 202, Dairy Products. These establishments were not included in the figures for earlier census years. In addition, beginning with 1954, the figures include data for Logging Camps and Logging Contractors, industry 2411, which were not included within the scope of the 1947 census. There were also a number of changes in the definition of manufacturing industries during earlier census years that affect the comparability of the historical series. Among the more important of these were the following: Figures for 1935 and later years exclude data for railroad repair shops and manufactured gas which were included in 1899 to 1933 figures; the minimum size of establishment included for 1947 to 1963 was 1 employee; for 1921 to 1939, manufacturing establishments reporting value of shipments of \$5,000 or more were within scope whereas for 1919 and earlier years, the cutoff was \$500. (These changes in procedure have not appreciably affected the comparability of the historical data except for the figures on number of establishments.)

²Employment and payroll totals for central administrative offices and auxiliaries are included in the statistics shown for the years 1954 to 1972. Prior to 1954, this information was not available. The "number of establishments with 20 employees or more" total for 1958 and all previous years and "total number of establishments" total for 1954 and previous years does not include data for central administrative offices and auxiliaries.

³For the years 1958 to 1972, includes expenditures for plants under construction but not in operation in addition to expenditures at operating manufacturing establishments. Prior to 1958, the data represents expenditures at operating manufacturing establishments only.

⁴Does not include data for Alaska and Hawaii.

⁵Data for 1954 employment and payroll exclude central administrative offices and auxiliary units. This information was not collected for Alaska and Hawaii in 1954.

⁶This SCA changed definition in 1972. Historical data prior to 1972 are based on the old definition. (See appendix F for the old and new definitions.)

⁷This table includes data only for standard metropolitan statistical areas with 40,000 or more manufacturing employees in 1972 or 1967. The definitions of the standard metropolitan statistical areas are shown in appendix F.

⁸This SMSA changed definition in 1972. Historical data prior to 1972 are based on the old definition. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. (See appendix F for the old and new definitions.)

⁹This SMSA changed definition in 1972. Historical data prior to 1972 are based on the old definition. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. (See appendix F for the old and new definitions.)

¹⁰Comparable data for years prior to 1958 are not available due to a revision in the definition of the standard metropolitan statistical area. See the 1958 or 1954 Census of Manufactures, Area Statistics, Volume III, for statistics for the area as defined at that time.

¹¹This SMSA changed definition in 1972. Historical data have been revised accordingly. (See appendix F for the old and new definitions.)

¹²This SMSA was defined after the 1967 census. Historical data are not available.

TABLE 8. General Statistics, by Employment Size of Establishment: 1972

(See appendix, Explanation of Terms)

ESTABS. COVERED BY ADMIN. RECORDS ¹ E0	7 170	23.0	143.9	19.7	34.2	93.6	344.1	271.4	615.4	13.3	110.0

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Report forms were not mailed to companies that operated only one establishment—generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLES

1	Value of Inventories of Manufacturing and Distribution Sectors: 1972 and Earlier Years	3
2	Value of Manufacturers' Inventories for Industry Groups and Industries: End of 1972 and 1971	4
3	Value of Manufacturers' Inventories for Divisions and States: End 1972 and 1971	12

EXPLANATORY TEXT

The value of beginning-of-year and end-of-year inventories, respectively, held by each manufacturing establishment was obtained in the 1972 census. Separate inventory figures were requested for (1) finished products, (2) work in process, and (3) materials, supplies, fuel and other inventories.

Respondents were asked to report their inventories at approximate current costs if feasible; otherwise, at book values. Since different methods of inventory valuation are used (LIFO, FIFO, etc.), the definition of the value of inventories aggregate for all establishments in an industry is not precise. The figures on change in inventory between the beginning and the end of the year are of considerably greater significance.

In using inventory data by stage of fabrication for all industries and at the 2-digit industry level, the following should be noted: An item treated as a finished product by an establishment in one industry may be reported as a raw material by another establishment in a different industry; for example, the finished product inventories of a steel mill would be reported as raw materials by a stamping plant. Such differences are present in the inventory figures by stage of fabrication shown for individual industries, industry groups, and all manufacturing which are merely aggregates of figures reported by establishments in specified industries. Further, the total finished-goods

inventory for "all manufacturing" includes items that are not finished manufactured products.

For a few industries in the food group, there are special problems in the handling of inventories by stage of fabrication. These are industries in which the products are usually stored under controlled conditions, and the products are aged. Included among such types of products are stemmed and dried tobacco, cheese, and whiskey. It is not clear whether such products should be treated as finished goods, work in process, or material and supplies inventories while in storage. In the cheese and whiskey industries substantial finished-goods inventories have been reported while in the tobacco industries, the bulk of the inventories have been classified as materials and supplies. These data have been summarized in the inventory tables in a consistent manner for the years included in this report.

Data in this publication may differ slightly from the industry and area reports previously published. These differences are due to corrections which were made for minor errors identified after the industry and area reports were issued. This report reflects these corrections.

TABLE 1. Value of Inventories of Manufacturing and Distribution Sectors: 1972 and Earlier Years

(Millions of dollars)

Sector	1972	1967	1963	1958	1954
Specified sectors, total.....	213,905	150,581	(NA)	(NA)	(NA)
Operating manufacturing establishments.....	108,936	84,406	59,913	49,354	40,341
Manufacturers central administrative offices.....	3,483	2,234	(NA)	(NA)	(NA)

1 Manufacturers' Expenditures for Plant and Equipment: 1972 and Earlier Years	3
2 Manufacturers' Expenditures for Plant and Equipment by Industry Group and Industry: 1972 and 1967	4
3 Manufacturers' Expenditures for Plant and Equipment by Division and State: 1972 and 1967	11
4 Manufacturers' Expenditures for New Plant and Equipment by Division and State and by Major Industry Group: 1972	12

EXPLANATORY TEXT

In the 1972 census, manufacturers were asked to report expenditures made during the year for permanent additions and major alterations to their plants, as well as for new machinery and equipment purchases, that were chargeable to fixed asset accounts of manufacturing establishments and were of a type for which depreciation accounts are ordinarily maintained. Expenditures for machinery and equipment were to include those made for replacement purposes, as well as for additions to plant capacity. Excluded from such expenditure totals are costs of maintenance and repairs charged as current operating expense; new facilities and equipment leased from nonmanufacturing concerns; new facilities owned by the Federal Government but operated under contract by private companies; and plant and equipment furnished to the manufacturer by communities and organizations.

In addition to total capital expenditures, respondents were requested to indicate the following subtotals: (a) New structures and additions to plant (including major alterations and capitalized repairs and improvements); (b) new machinery and new equipment (including capitalized repairs and improvements); and (c) expenditures for used plant and used equipment acquired from others (including the U.S. Government). The figures include (a) the expenditures made at manufacturing plants that were in operation during any part of the year, plus (b) expenditures made at plants that were under construction but not as yet in production.

The Census Bureau estimates of capital expenditures differ from those published in the joint Bureau of Economic Analysis-Securities and Exchange Commission survey. In addition to normal sampling variation, a major source of differences is to be found in the scope of the two series. Census data relate only to manufacturing establishments, whereas the BEA-SEC series covers all establishments of manufacturing companies—nonmanufacturing as well as manufacturing. On the other hand, manufacturing establishments of companies engaged primarily in nonmanufacturing activities are excluded from the BEA-SEC series but included in Census figures. Both series, it should be noted, exclude expenditures for plant and equipment at establishments owned by the Federal Government but operated under lease or contract by private companies.

Data in this publication may differ slightly from the industry and area reports previously published. These differences are due to corrections which were made for minor errors identified after the industry and area reports were issued. This report reflects these corrections.

TABLE 1. Manufacturers' Expenditures for Plant and Equipment: 1972 and Earlier Years

(Millions of dollars, except employees)

Year ¹	Expenditures for new plant and equipment ²			Expenditures for used plant and equipment	All employees ³ (1,000)	Value added by manufacture ⁴ (f)	Indexes of change (1958 = 100) for data in—

(NA) Not available.

¹The 1958 through 1972 figures include establishments classified in industry 3273, Ready-Mixed Concrete, and industry 3599, Miscellaneous Machinery, Except Electrical, that were engaged exclusively or almost exclusively in machine shop repair work. The data for such establishments are excluded from the figures for the period 1947 to 1957. The 1954 to 1972 figures include data for establishments engaged in the processing and distribution of fluid milk, industry group 202, Dairies. These establishments were not included in the figures for earlier years. The 1954 through 1972 figures include data for Logging Camps and Contractors, industry 2411, which were not included within the scope of the 1947 census and 1949 to 1953 annual survey years. In addition, the figures for 1957 and earlier years do not include data for Alaska and Hawaii.

²The figures for 1951 to 1972 include expenditures for plants under construction and not yet in operation. This information was not collected prior to 1951.

³Represents employment at operating manufacturing establishments. Figures for central administrative offices and auxiliary units are not included.

⁴For the period 1954 to 1972, value added by manufacture represents adjusted value added and for earlier years, unadjusted value added. Unadjusted value added is obtained by subtracting the cost of materials, supplies and containers, fuel, purchased electric energy, and contract work from the value of shipments for products manufactured plus receipts for services rendered. Adjusted value added also takes into account (a) value added by merchandising operations (that is, the difference between the sales value and cost of merchandise sold without further manufacture, processing, or assembly), plus (b) the net change in finished goods and work-in-process inventories between the beginning and end of the year.

⁵The expenditures figures for 1949 to 1953, 1955 to 1957, 1959 to 1962, 1964 to 1966, and 1968 to 1971 are estimates derived from a sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates do not exceed 1 percent.

⁶In 1947, very small establishments that accounted for approximately 1.6 percent of the total value added by manufacture did not report expenditure data and are not represented in the 1947 figures. See 1947 Census of Manufactures, Volume I, Chapter VI, for a measure of undercoverage by industry.

SECTION I. Selected Materials Consumed

GENERAL

In this section, summary data by industries are shown for those materials for which relatively complete manufacturing consumption was reported in the 1972 Census of Manufactures. About 125 selected materials consumed by manufacturing establishments in 1972 are covered. The section is divided into separate chapters for each of the selected materials: Foods; textiles; newsprint and paperboard containers; chemicals and rubber; metals; and engines, motors, bearings, electron tubes, and semiconductors.

Preceding Chapter 1 are two summary tables showing detailed data for all materials consumed. The first table shows the percentage that the cost of materials specifically reported is of the cost of all materials consumed by an industry. Separate data for these specified purchased materials appear in the final Industry series MC72(2). This table provides information showing the degree to which materials data, by industry, were collected and compiled in the 1972 Census of Manufactures. The second table is an index of all materials consumed covered in the census, including some materials consumed for which data were compiled but not shown in this chapter because of limited coverage. This section, therefore, is a ready reference to all data on materials consumed contained in the 1972 Census of Manufactures.

Some additional data on materials consumed are collected and published in the Census Bureau's Current Industrial Reports. Selected consumption information, such as quantities produced and consumed, or paper purchased for specific products were also collected in the product and special inquiry sections of the census of manufactures report form. These data generally are not to be found in this chapter but appear in the appropriate industry reports.

In addition to the data referred to above, other related statistics were collected in the 1972 Census of Manufactures and 1972 Census of Mineral Industries. Table 3 of the final Industry series contains information showing the cost of resales, fuels, electricity, and contract work. The statistics on detailed fuels and electric energy appear in MC72(SR)-6 for manufactures and MIC72(1)-5 for mineral industries. The statistics on detailed water consumed appear in MC72(SR)-5 for manufactures and MIC72(1)-2 for mineral industries. Data relating to materials mined by establishments classified in manufacturing, primarily those for Major Group 32, Stone, Clay, Glass, and Concrete Products, are included in the census of mineral industries publications.

SCOPE OF DATA IN TABLES

The data are arranged in this section according to broad groups of industries which represent 2-digit Standard Industrial Classification groups or combinations of such groups. The text preceding each industry grouping defines the group, notes any special problems, and points out where consumption outside manufacturing is significant. In addition, definitions of the materials for which data are shown or other explanatory statements are included in these texts.

The statistics shown in this section include primarily "complete" coverage materials for which figures were collected in the materials inquiry section of the census of manufactures forms. "Complete" coverage materials are those for which the data obtained in the 1972 census represent about 90 percent or more of total consumption by manufacturing industries. Generally, materials data are not shown in this chapter where only two or three industries accounted for the major portion of the manufacturing consumption of the material. However, such materials are listed in summary table BB and the data are shown in the materials consumed tables of the Industry series reports. Also, statistics are not generally shown in this chapter on materials for which census information was obtained in conjunction with the data on shipments of the material. Data on the latter material appear in the product tables (table 6) of the industry reports.

ESTABLISHMENT BASIS OF DATA

With a few exceptions that are noted in the individual texts, the data shown are the total consumption by establishments classified in the specified industry rather than the total consumption in the manufacture of the products defined by the industry title. That is, all of the metal consumed by an establishment classified in the Metal Forgings, and Stampings Industry (3462) is included in the total for that industry. Consequently, the quantity of material consumed by this industry includes not only that used in stampings but also the quantities used in producing secondary products such as special dies, jigs, fixtures, and electrical appliances. The 1972 Census of Manufactures summary report (MC72(1)-1) includes an appendix (B) entitled, Industry Descriptions, which shows (a) the percentage of primary products shipped within an industry to the total of all products shipped for the industry (specialization ratio) and (b) the percentage of primary prod-

SECTION I—Continued

ucts shipped within an industry to the total of primary products shipped by all industries (coverage ratio).

It should be kept in mind that materials totals for an industry only include the material consumed in products primary or secondary to the specified industry. Material consumed in products primary to the specified industry, but reported as secondary products in another industry, are not included in the specified industry.

COVERAGE

As noted in the introduction to the census volumes, some undercoverage exists in the statistics for most materials. This undercoverage results from the fact that very small establishments and establishments consuming negligible amounts of specific materials were not required to report these materials. While no precise measure of the effect of the undercoverage is available, it is believed that for most materials for which data are shown in this section the understatement is insignificant. However, for some materials characterized by large numbers of small consumers, the undercoverage resulting from this factor may be of some consequence, especially in the smaller cells. For example, adjustments for this undercoverage are shown for broadwoven fabrics (textiles).

The totals for consumption of a material by all industries shown in the tables in this section generally do not represent complete manufacturing consumption. Industries selected for coverage generally totaled 90 percent or more of manufacturing consumption. Consequently, as much as 10 percent of the manufacturing consumption of a material may not be accounted for in the table. This factor would not affect the totals for the individual industries included in the tables. Moreover, data for material consumption in a State represent the consumption in that State only by the industries specified in the material by industry table.

DEFINITION OF MATERIALS CONSUMED

Census respondents were requested to report the amounts actually paid or payable after discounts and to include freight

and direct charges incurred in acquiring the materials consumed during 1972. For materials transferred from other establishments of the same company, respondents were requested to report the nearest approximation to the commercial value of the material. Where a question arose concerning such transfer values, respondents were requested to determine the value of the material reported in the census as a product by the producing plant and then to add only freight and other direct handling charges. Thus the cost of materials consumed represents a "purchasers price" as contrasted to the value of the output of the material which may be termed a "producers price."

Consumption of any given item was defined as the quantity actually consumed or put into production by the establishment during the report year. Respondents were generally permitted to use purchase data where purchases closely approximated consumption. However, where inventory change was significant, respondents were requested to take this into account in determining consumption for major items.

RELATIONSHIP OF MATERIALS DATA TO OTHER STATISTICS

The materials consumed by manufacturers may have been obtained from any or all of a number of possible sources—imports as well as materials produced domestically. They may have been produced in the establishment or obtained directly from the manufacturer of the materials, from some trade channel such as wholesalers, or from the stocks of the consuming manufacturer. In some instances, previously held stocks of producers of the material and of trade channels were a significant source of individual materials consumed during the year.

The products produced from the materials consumed may have been shipped or added either to work in process or finished goods inventory as of the end of the year. Therefore, in relating material consumed data to shipment or value added data, it is necessary to take into account inventory changes in work in process and finished goods for the industry.

Data in this publication may differ slightly from the industry reports previously published. These differences are due to corrections which were made for minor errors identified after the industry reports were issued. This report reflects these corrections.

TABLE AA. Cost of Materials, Parts, Supplies, and Containers Consumed, by Each Industry: 1972

In millions of dollars. The table below shows totals for the materials consumed in each industry as reported on item 17, "Selected Materials Consumed During 1972," on the 1972 Census of Manufactures reporting form. Industries for which no specific materials were reported are not shown. See table 7A of the 1972 Census of Manufactures final industry reports, for the specific materials consumed in each industry.

"Total cost of materials" is the cost of all materials consumed by the industry, including miscellaneous materials and materials not reported separately. It represents the amounts paid or payable for materials, parts, containers, and supplies consumed or put into production during the year after discounts and including freight charges and other direct charges incurred by the establishment in acquiring these materials. It

excludes the cost of items bought and resold in the same condition, cost of contract work, fuels, and electric energy.

"Cost of specified materials" is the total of only those specific materials reported by each industry on item 17. In part, this figure and particularly the percentage represents some degree of understatement regarding the amount of detail available for materials consumed. For example, the figures do not reflect the information on materials collected on other sections of the report form, such as in the product or special inquiry sections.

The last column in the table shows the percentage that the cost of specified materials is of the total cost of materials consumed.

(NA) Not available.

¹Separate data cannot be published for industry 3572, Typewriters, without revealing the operations of individual companies. Accordingly, industry 3572 has been combined with industry 3579, Office machines, N.E.C., for 1972.

TABLE BB. Materials Consumed by Industries

Data for the selected materials shown in tables 1A-6D of this chapter are confined to materials for which complete coverage was obtained. In addition to data shown in this chapter, information for a large number of other materials are shown in Volume II which presents separate chapters for individual industries. Data on the use of these other materials were obtained where they were an important part of total material cost of the given industry. The table below contains a list of all materials for which data were collected on either a "complete coverage" or "partial coverage" basis on the material inquiry section (item 17) of the 1972 Census of Manufactures report forms.

All materials in the census of manufactures are assigned a 6-digit code, based on the following example. The first four digits of the food and agricultural materials indicate the agricultural industry of which the material is a basic product as specified in the 1972 edition of the Office of Management and Budget's *Standard Industrial Classification Manual*. Materials primarily produced in the manufacturing and mineral industries

have a meaningful fifth digit which indicates the primary product class in which the material is manufactured or mined. In cases where the material represents a broad class of materials, the fifth digit will be "0." All 3- and 4-digit industry codes in the last column are the same as those specified in the *Standard Industrial Classification Manual*.

Consumption data collected in the product and special inquiry sections of the census report forms are not shown in the selected materials tables of this chapter nor are they reflected in the list below. These are generally products produced and consumed at the same establishment or receipts and/or purchases of similar or allied items produced in the reporting establishment. Such statistics are included in table 6 (product table) of the 1972 Census of Manufactures final industry reports.

The codes shown under "Consuming industries" indicate the industries for which data on the given material was published. Wherever a 3-digit industry group appears, all 4-digit industries with the group are included.

				Knitted materials:	
207711	Grease and inedible tallow.....	2841, 2842	225011	Hosiery in the greige.....	2251, 2252
207721	Meat meal and tankage.....	2047, 2048	225078	Knitted fabrics, cotton, wool, manmade fibers, etc.	2253, 2254, 2257, 2258, 2259, 2311, 2321, 2322, 2323, 2327, 2328, 2329, 2331, 2335, 2337, 2339, 2341, 2342, 2361, 2363, 2369, 2381, 2384, 2385, 2386, 2389, 3151
207736	Fish meal and solubles.....	2047, 2048			
209993	Spices and curing materials.....	2011, 2013			
	Tobacco materials:				
214111	Unstemmed leaf tobacco, redried and packed.	2111, 2121, 2131, 2141			
214123	Stemmed leaf tobacco, excluding processed sheet and homogenized tobacco.	2111, 2121, 2131, 2141	228011	Yarns, except cotton, nylon spun yarns, acrylic, and nylon filament yarns.	2251, 2252
214124	Processed sheet tobacco and homogenized tobacco.	2111, 2121, 2131, 2141			
214129	Other tobacco materials.....	2111, 2121, 2131, 2141	228013	Yarns, except cotton, rayon and acetate spun yarns, nylon and spun filament yarns, polyester spun yarns, acrylic yarns, wool yarns.	2253, 2254, 2257, 2258, 2259
	Textile materials:				
	Broadwoven fabrics:		228015	Yarns, all fibers.....	2269, 2297
220119	Broadwoven fabrics, uncoated, except cotton.	3711, 3713, 3714, 3715	228101	Spun yarns, all fibers.....	2211, 2221, 2231, 2281, 2282, 2283, 2284
220123	Cotton, wool, manmade fiber fabrics, etc.	2381, 3151, 3721, 3724, 3728, 3769, 3942, 3944, 3949	228102	Cotton yarns.....	2241, 2251, 2252, 2292, 2298, 3357
			228110	Carded cotton yarns.....	2253, 2254, 2257, 2258, 2259
220126	Piece goods, including linings....	2323, 2342, 2384, 2385, 2386, 2387, 2389	228120	Combed cotton yarns.....	2253, 2254, 2257, 2258, 2259
220127	Fabrics, excluding coated, impregnated or laminated fabrics other than cotton, rayon and acetate, and nylon.	2391, 2392, 2393, 2394, 2399	228130	Rayon and acetate spun yarns.....	2253, 2257, 2258, 2259
220128	Fabrics, uncoated, except cotton, rayon and acetate.	2396	228141	Nylon spun yarns.....	2251, 2252, 2253, 2257, 2258, 2259
220129	Broadwoven fabrics, piece goods....	2311, 2321, 2322, 2327, 2328, 2329, 2331, 2335, 2337, 2339, 2341, 2361, 2363, 2369, 3161, 3171, 3172	228143	Polyester spun yarns.....	2253, 2257, 2258, 2259
			228145	Acrylic yarns.....	2251, 2252, 2253, 2257, 2258, 2259
220149	Broadwoven fabrics, except cotton..	3842	228301	Wool yarns.....	2253, 2257, 2258, 2259
220211	Broadwoven fabrics, purchased or transferred from other plants of same company.	2211, 2221, 2231, 2261, 2262			
221101	Cotton piece goods, excluding coated, impregnated or laminated fabrics.	2391, 2392, 2393, 2394 2399, 3842	282011	Manmade fiber filament yarns:	
221103	Uncoated cotton broadwoven fabrics.	2396, 3711, 3713, 3714, 3715		Manmade fiber yarns, rayon, acetate, nylon, etc.	2292, 2298
221141	Ticking, mattress.....	2515	282301	Rayon and acetate, and glass....	2211, 2221, 2231, 2241, 2253, 2257, 2258, 2259, 2281, 2282, 2283, 2296
221161	Woven upholstery fabrics, cotton, excluding ticking and muslin.	2515			
222101	Rayon and acetate broadwoven fabrics, excluding coated, impregnated or laminated fabrics.	2391, 2392, 2394, 2399	282402	Filament yarn, except polyester, rayon and acetate, and glass.	2211, 2221, 2231, 2281, 2283, 2284, 2296
222102	Rayon and acetate broadwoven fabrics, uncoated.	2396	282411	Nylon filament yarns.....	2241, 2251, 2252, 2253, 2257, 2258, 2259
222103	Woven upholstery fabrics--rayon, nylon, polyester, etc., excluding ticking and muslin.	2515	282423	Polyester filament yarns.....	2211, 2221, 2231, 2253, 2257, 2258, 2259, 2281, 2282, 2296
222105	Nylon broadwoven fabrics, except coated, impregnated or laminated fabrics.	2391, 2392, 2393, 2394, 2399	322935	Glass filament yarn and roving...	2221, 2231, 2241, 2281, 2296
			229308	Paddings and fillings, except rubber and plastic foam.	2512, 2515
			229501	Coated, impregnated, and laminated fabrics.	3792
			229502	Coated fabrics, other than vinyl	2396
			229503	Coated, impregnated, or laminated plastics on cloth backing, including artificial leather.	2392, 2393, 2394, 2399, 3142, 3143, 3144, 3149, 3161, 3171, 3172
			229506	Plastic coated fabric and shade cloth.	2591
			229507	Coated or impregnated woven and non-woven fabrics, except rubberized.	2782, 2789
			229508	Coated or laminated fabric, for upholstery.	2512, 2514, 2515, 2521, 2522, 2531, 2541, 2542, 2599
			229521	Vinyl coated fabrics, with cotton backing.	2396

TABLE BB. Materials Consumed by Industries—Continued

1972 material code	Material	Consuming industries (SIC code)	1972 material code	Material	Consuming industries (SIC code)
	MANUFACTURED MATERIALS--Continued			MANUFACTURED MATERIALS--Continued	
	Textile materials--Continued			Wood materials--Continued	
	Tire cord and tire fabric:		243103	Doors and door units, wood.....	2452
229601	Cotton cord.....	3011, 3031, 3041, 3069	243056	Plywood.....	3731, 3732, 3792
229602	Rayon cord.....	3011, 3031, 3041, 3069	243601	Softwood plywood.....	2431, 2434, 2435, 2436, 2439, 2441, 2449, 2452, 2511, 2517, 2521, 2522, 2531, 2541, 2542, 2599
229603	Nylon cord.....	3011, 3031, 3041, 3069			
229605	Polyester cord.....	3011, 3031, 3041, 3069			
229606	Fiberglass fabrics.....	3011, 3031, 3041, 3069	243510	Hardwood plywood.....	2435, 2436, 2452, 2521, 2522, 2531, 2541, 2542, 2599
229609	Chafer and other tire fabrics.....	3011, 3031, 3041, 3069			
229931	Raw wool, mohair, and other animal fibers, scoured weight.	2221, 2231, 2281, 2283		Other than container type:	
229933	Wool tops.....	2221, 2231, 2281, 2283	243511	Veneer core.....	2431, 2434, 2511, 2517
229801	Cordage.....	2591	243513	Board core, including lumber, particleboard, and hardboard core.	2431, 2434, 2511, 2517
229710	Nonwoven fabric.....	2641, 2647, 2649, 3842			
229921	Burlap bags, new.....	2041, 2043, 2047, 2048	243515	Container type.....	2441, 2449
229300	Containers, textile.....	2874, 2875			
239301	Cotton bags.....	2041, 2043, 2047, 2048	243540	Veneer:	
	Wood materials:			Hardwood.....	2431, 2434, 2435, 2436, 2441, 2449, 2511, 2517, 2521, 2522, 2531, 2541, 2542, 2599
	Pulpwood:				
	Softwood, bolts and logs:			Softwood.....	2431, 2435, 2436, 2441, 2449
241101	Spruce and true fir.....	2611, 2621, 2631	243640	Particleboard.....	2431, 2434, 2435, 2436, 2439, 2452, 2511, 2517, 2521, 2522, 2531, 2541, 2542, 2599
241102	Hemlock.....	2611, 2621, 2631	249200	Hardboard, wood fiberboard.....	2431, 2434, 2452, 2498, 2449, 2511, 2517, 2521, 2522, 2531, 2541, 2542, 2599
241103	Jack pine.....	2611, 2621, 2631			
241104	Southern pine.....	2611, 2621, 2631, 2661		Furniture materials:	
241105	Other softwoods, including Douglas fir.	2611, 2621, 2631	251011	Cabinets, wood, metal, and plastic...	3651
242015	Softwood slabs, cores, sawdust, bark, and other mill residues.	2611, 2621, 2631, 2661	242661	Furniture frames, wood.....	2434, 2511, 2512, 2515, 2517
242157	Softwood wood chips.....	2611, 2621, 2631, 2661			
	Hardwood, bolts and logs:			Paper and paperboard materials:	
241106	Northern mixed hardwoods.....	2611, 2621, 2631, 2661		Woodpulp:	
241107	Poplar, aspen and popple.....	2611, 2621, 2631, 2661	261101	Used in pressed and molded pulp products.	2821, 2823, 2824
241108	Southern mixed hardwoods.....	2611, 2621, 2631, 2661	261102	Produces at affiliated or associated mills.	2611, 2621, 2631, 2661
241119	Other hardwoods.....	2611, 2621, 2631	261104	Purchased (market) woodpulp.....	2297, 2611, 2621, 2631, 2661
242013	Hardwood slabs, wood chips, cores, sawdust, bark, and other mill residues.	2611, 2621, 2631, 2661	261122	Linter pulp.....	2621
	Logs, bolts, and unsliced flitches:			Paper:	
241111	Hardwood.....	2421, 2426, 2429, 2431, 2435, 2436, 2441, 2448, 2449, 2499	262100	Newsprint, book, bond, cover, coated, tissue, groundwood, writing, file folder, tag stock.	2782, 2789
241112	Softwood.....	2421, 2426, 2429, 2431, 2435, 2436, 2441, 2448, 2449, 2499	262101	Paper, except newsprint and coated papers.	2711, 2732, 2751, 2752, 2753, 2754, 2761
241109	Poles, piling, and other round or hewn wood products.	2491	262102	Uncoated papers, groundwood, book, bond, writing, ledger, and manifold.	2721, 2731, 2741
242011	Chips, slabs, edgings, shavings, sawdust, and other wood wastes.	2448, 2492, 2499	262105	Paper produced at own location or at affiliated or associated mills.	2641, 2642, 2643, 2645, 2646, 2647, 2648, 2649, 2651, 2653, 2654, 2655
	Lumber:		262106	Purchased (market) paper.....	2641, 2642, 2643, 2645, 2646, 2647, 2648, 2649, 2651, 2652, 2653, 2654, 2655
242111	Rough and dressed:		262111	Newsprint.....	2711, 2721, 2731, 2741
	Hardwood.....	2421, 2426, 2434, 2435, 2436, 2511, 2512, 2517, 2521, 2522, 2531, 2541, 2542, 2599	262112	Newsprint.....	2732, 2751, 2752, 2754, 2761
242123	Softwood.....	2434, 2435, 2436, 2511, 2512, 2517, 2521, 2522, 2531, 2541, 2542, 2599	262131	Coated papers, all types.....	2711, 2721, 2731, 2741
242110	Rough lumber, including sawn ties:		262136	Coated one side.....	2732, 2751, 2752, 2754, 2761
	Hardwood.....	2421, 2426, 2431, 2439, 2441, 2448, 2449, 2452, 2491, 2499	262138	Coated two sides.....	2732, 2751, 2752, 2754, 2761
242121	Softwood.....	2421, 2426, 2431, 2439, 2441, 2448, 2449, 2452, 2491, 2499	262150	Bristols, cover, text and other specialty paper, uncoated.	2721, 2731, 2741
242103	Dressed lumber.....	3731, 3732, 3792	262163	Carbonless papers.....	2752, 2761
242117	Hardwood.....	2421, 2426, 2431, 2439, 2441, 2448, 2449, 2499	262164	Carbonizing tissue stock for conversion into one-time carbon paper	2761
242128	Softwood.....	2421, 2426, 2431, 2439, 2441, 2448, 2449, 2499			
242622	Rough, surfaced, or semifabricated hardwood furniture dimension and dimension stock.	2434, 2448, 2499, 2511, 2512, 2515, 2517			
243101	Windows and window units, wood.....	2452			

TABLE BB. Materials Consumed by Industries—Continued

1972 material code	Material	Consuming industries (SIC code)	1972 material code	Material	Consuming industries (SIC code)
	MANUFACTURED MATERIALS--Continued			MANUFACTURED MATERIALS--Continued	
	Paper and paperboard materials--Con.			Chemical materials--Continued	
	Paperboard:			Pigments--Continued	
263102	Produced at own location or at af- filiated or associated mills.	2641, 2643, 2645, 2646, 2648, 2649, 2651, 2652, 2653, 2654, 2655	281601	Other inorganic pigments; including chrome colors, whiting, calcium carbonate, precipitated, white and red lead, litharge, lithopone, etc.	2851
263103	Purchased (market) paperboard.....	2641, 2642, 2643, 2645, 2646, 2647, 2648, 2649, 2651, 2652, 2653, 2654, 2655	281611	Titanium dioxide, composite and pure	2621, 2631, 2661, 2851
263105	Paperboard, except that used for shipping, such as news, chip, pasted, tablet, check, binders board.	2732, 2751, 2752, 2753, 2754, 2761, 2782, 2789,	281622	Zinc oxide pigments, including leaded zinc oxide.	2851
263112	Paperboard liners.....	3275	281634	Litharge.....	3691
264140	Pressure sensitive base stock, self- adhesive, including all types, paper, film, foil, etc.	2732, 2751, 2752, 2761	281211	Alkalies and chlorine:	
260012	Containers, sacks, and boxes:			Chlorine.....	2611, 2621, 2812, 2819, 2842, 2865, 2869
	Paper and paperboard products, including shipping containers, setup and folding cartons, etc., excluding paperback foil and cigarette paper.	2111, 2121, 2131, 2141	281228	Sodium carbonate, soda ash.....	2621, 2812, 2819, 2841, 2842, 2865, 2869, 3211, 3221, 3229
260091	Paper and paperboard containers and shipping sacks.	2062, 2063, 2075, 2079 2091, 2823, 2824, 2844, 2851, 3011, 3021, 3031, 3041, 3069, 3411, 3412, 3585, 3631, 3632, 3633, 3634, 3635, 3636, 3639, 3641, 3651, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679	281238	Sodium hydroxide, caustic soda....	2611, 2621, 2812, 2819, 2823, 2824, 2841, 2842, 2865, 2869, 2911, 2992 3312
264302	Bags (except textile), including shipping sacks, multiwall bags, and polyethylene lines.	2874, 2875	281340	Oxygen, including high and low purity, liquid oxygen in terms of gaseous equivalent.	
264338	Paper shipping sacks and multiwall bags.	2041, 2043, 2045, 2047, 2048, 3241, 3274, 3275		Cyclic intermediates and coal tar crudes:	
265001	Paperboard containers and boxes....	3942, 3944	286511	Aniline.....	2812, 2819, 2865, 2869
265011	Paperboard boxes and containers, including folding, corrugated, and setup boxes.	2032, 2033, 2037, 2038, 2431, 2514, 2521, 2522, 2531, 2541, 2542, 2599, 2621, 2631, 2641, 2643, 2647, 2648, 2649, 2831, 2833, 2834, 2841, 2842, 3429, 3465, 3466, 3469, 3949	286512	Nitrobenzene.....	2812, 2819, 2865
265013	Paperboard folding and corrugated boxes.	2041, 2043, 2045, 2047, 2048	286513	Phenol.....	2812, 2819, 2821, 2865, 2869
265019	Paperboard containers and boxes, ex- cept corrugated shipping containers	3221	286514	Phthalic anhydride.....	2812, 2819, 2821, 2851, 2865, 2869
265301	Corrugated paperboard shipping con- tainers.	3221, 3229, 3231	286515	Melamine.....	2821
265522	Cans, bodies with combination of fiber and other materials, foil, plastic, etc., with metal ends.	2991, 2992	286516	Styrene.....	2821, 2822, 2851
264926	Paper, cellulosic wadding.....	2297	286551	Creosote oil.....	2491
266101	Roofing felts (unsaturated, other con- struction paper and insulating board.	2952	286552	Benzol, benzene.....	2812, 2819, 2865, 2869
278227	Looseleaf metal parts.....	2782, 2789	286553	Tar, crude.....	2812, 2819, 2865
280010	Chemical materials:		286555	Naphthalene, grades of 77.5°C. or higher.	2812, 2819, 2865, 2869
	Additives, e.g., fire retardants, water repellants, softeners, antistatics, etc.	2297		Industrial organic chemicals:	
280011	Antioxidants, antiknock compounds, and inhibitors, except animal and vegetable oils.	2911, 2992	286901	Optical bleach, optical brightener.	2841, 2842
280012	Other additives, including soaps and detergents, except animal and vegetable oils.	2911, 2992	286911	Driers, naphthenic acid salts, rosin acid salts, etc.	2851
280021	Tanning materials, dressings, dyes, and other finishing agents.	3111, 3131	286914	Hexamethylenediamine.....	2823
280023	Pigments:		286920	Alcohols, including amyl, butyl, methyl and propyl.	2812, 2819, 2821, 2865, 2869
286531	Organic and inorganic.....	3292	286921	Acrylonitrile.....	2821, 2822, 2823, 2824
	Dyes, lakes, and toners.....	2211, 2221, 2231, 2261, 2262, 2269, 2281, 2282, 2283, 2284, 2851	286922	Solvents, butyl alcohols, butyl acetone, etc.	2851
281600	Inorganic pigments.....	3011, 3021, 3031, 3041, 3069	286923	Formaldehyde.....	2812, 2819, 2821, 2869
			286924	Cellulose acetate.....	2821
			286925	Acrylates and methacrylates, monomers.	2821, 2823, 2824
			287321	Urea and calurea.....	2047, 2048, 2821, 2874, 2875
			286927	Vinyl acetate, monomer.....	2821, 2851
			286928	Vinyl chloride, monomer.....	2821
			286929	Acetic anhydride, net after recovery.	2823, 2824
			286933	Rubber processing chemicals, accel- erators, antioxidants, blowing agents, inhibitors, peptizers, etc.	2821, 2822, 3011, 3021, 3031, 3069
			286935	Plasticizers.....	2821, 3011, 3021, 3031, 3041, 3069, 3079
			286937	Diocetyl phthalate, dibutyl ph- thalate, diisodecyl phthalate, dioctyl sebacate, tricresyl phosphate, etc.	2851
			286952	Alcohol, ethyl, pure and denatured.	2812, 2819, 2865, 2869
			286963	Caprolactam.....	2823, 2824
			286965	Glycols, ethylene, propylene, etc..	2823, 2824
			286967	Glycerol, glycerine.....	2851
			286968	Pentaerythritol.....	2851

TABLE BB. Materials Consumed by Industries—Continued

1972 material code	Material	Consuming industries (SIC code)	1972 material code	Material	Consuming industries (SIC code)
	MANUFACTURED MATERIALS--Continued			MANUFACTURED MATERIALS--Continued	
	Chemical materials--Continued			Chemical materials--Continued	
	Industrial inorganic chemicals:			Plastics--Continued	
280093	Mixed acid, sulfuric and nitric....	2892	282141	Urea and melamine resins.....	2448, 2492, 2499
287311	Nitric acid.....	2812, 2819, 2865, 2869, 2873, 2892	282142	Phenolic and other tar acid resins.	2448, 2492, 2499
	Nitrogenous materials:		282105	Synthetic resins, alkyd, styrene, vinyl, urea, melamine, epoxy, phenolic acrylic, etc.	2851
287312	Ammonia, synthetic, anhydrous....	2812, 2819, 2865, 2869, 2873, 2874, 2875, 2892		Plastic shapes:	
287313	Ammoniating or nitrogen solutions including mixtures containing urea.	2874, 2875	307902	Plastic rods, tubes, and other shapes.	3451, 3452
287314	Ammonium nitrate.....	2874, 2875, 2892	307904	Plastic parts and accessories....	2591
287315	Ammonium sulfate.....	2874, 2875	307911	Unsupported plastic film and sheeting excluding packaging materials.	2391, 2392, 2396, 2399, 2514, 3711, 3714
281975	Sodium nitrate.....	2874, 2875		Plastic rods, tubes, and other shapes.	3079
287316	Other chemical nitrogenous materials, including potassium nitrate, calcium cyanamide and ammonium nitrate and limestone mixtures.	2874, 2875	307912	Casings, synthetic, including cellulosic and fibrous reinforced.	2011, 2013
281930	Sulfuric acid.....	3312, 3315	307914	Unsupported plastic film, sheets, and sheeting.	3142, 3143, 3144, 3149, 3161, 3171, 3172
281931	Sulfuric acid, except spent acid...	2812, 2819, 2821, 2822, 2823, 2824, 2865, 2869, 2873, 2874, 2875, 2911, 2992	307915	Unsupported plastic film, sheets and sheeting, except cellulosic.	2641, 2643, 2647, 2648, 2649
281932	Sulfuric acid sludge, decomposition acid.	2812, 2819	307918	Plastics film or sheeting.....	2782, 2789
281933	Spent sulfuric acid.....	2874	307921	Formed and slab stock for pillows, cushions, seating, etc.--urethane.	2512
281944	Hydrochloric acid.....	2812, 2819, 2865, 2869	307922	Urethane foam cores for mat- tresses, excluding topped pads.	2512, 2515
281946	Hydrofluoric acid.....	2812, 2819, 2869		Plastic laminated sheets.....	2431, 2434, 2511, 2512, 2514, 2517, 2521, 2522, 2531, 2541, 2542, 2599
287410	Phosphoric acid.....	2812, 2819, 2869, 2873, 2874, 2875	307940	Plastic containers.....	2831, 2833, 2834, 2841, 2842, 2844
281951	Alumina.....	3334	307951	Plastic furniture parts and components.	2434, 2511, 2512, 2514, 2517, 2521, 2522, 2531, 2541, 2542, 2599
281961	Aluminum sulfate.....	2611, 2621	307965	Fabricated pipe and fittings, plastic.	2452
281971	Potassium pyrophosphate (TKPP)....	2841, 2842	307905	Cut stock and findings, composi- tion and nuclear.	3142, 3143, 3144, 3149
281972	Sodium tripolyphosphate (STPP)....	2841, 2842		Synthetic rubber.....	3357
281973	Tetrasodium pyrophosphate (TSPP)...	2841, 2842	282202	S-type butadiene styrene copolymers; including solution polymerized types with styrene content of 50 percent or less, polybutadienes, emulsion polymerized types, and butadiene-vinylpyridine copolymers.	3011, 3021, 3031, 3041, 3069
281974	Trisodium phosphate (TSP).....	2841, 2842	282201	Butyl type.....	3011, 3021, 3031, 3041, 3069
281976	Sodium sulfate, including salt cake	2611, 2621, 3211, 3229	282205	Neoprene.....	3011, 3021, 3031, 3041, 3069
281980	Chemical catalytic preparations....	2911, 2992	282206	N-type, butadiene-acrylonitrile....	3011, 3021, 3031, 3041, 3069
281995	Silicon, hyperpure.....	3662, 3673, 3674, 3675, 3676, 3677, 3678, 3679	282207	Polyisoprene type.....	3011, 3021, 3031, 3041, 3069
281996	Phosphorus, elemental.....	2812, 2819, 2869	282208	Polyurethane.....	3011, 3021, 3031, 3041, 3069
281997	Silver nitrate.....	3861	282211	Stereo polybutadiene elastomers, so- lution-polymerized polybutadiene.	3011, 3021, 3031, 3041, 3069
282014	Manmade fibers, staple and tow.....	2257, 2258, 2392, 2399	282215	Ethylene-propylene type.....	3011, 3021, 3031, 3041, 3069
282305	Rayon and acetate, staple and tow..	2211, 2221, 2231, 2281, 2283	282209	Other elastomers.....	3011, 3021, 3031, 3041, 3069
282421	All other manmade fiber staple and tow, except glass.	2211, 2221, 2231, 2281, 2283	282303	Textile fibers, manmade--cellulosic, rayon and acetate.	2297
282425	Polyester staple and tow.....	2211, 2221, 2231, 2281, 2283	282403	Textile fibers, manmade--noncellu- losic polyester, nylon, etc.	2297
	Plastics:				
282101	Polyethylene plastics, all forms...	3357			
282102	Vinyl plastics, all forms.....	3357			
282103	Cellulosic plastics, sheet and rolls, and cellophane.	2641, 2643, 2647, 2649			
307981	Cellophane, tubes, sheets, rolls...	2111, 2121, 2131, 2141			
282130	Thermoplastic resins, cellulosics, polyethylene, styrenes, etc., in- cluding solid and liquid but ex- cluding sheets and other shapes.	2641, 2643, 2649, 2821, 3011, 3021, 3031, 3041, 3069, 3079, 3466, 3469, 3483, 3613, 3622, 3643, 3644, 3645, 3646, 3647, 3648, 3661, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3711, 3713, 3714, 3715, 3731, 3732, 3942, 3944, 3949			
282131	Polypropylene resins.....	2823, 2824			
282137	Vinyl and vinyl copolymer resins, all forms.	2295, 3292			
282140	Thermosetting resins, melamines, phenolics, polyesters, ureas, etc., including solid and liquid but excluding sheets and other shapes.	2435, 2436, 2439, 2452, 2821, 3011, 3021, 3031, 3041, 3069, 3079, 3465, 3466, 3469, 3483, 3613, 3622, 3643, 3644, 3645, 3646, 3647, 3648, 3661, 3662, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3711, 3713, 3714, 3715, 3731, 3732, 3942, 3944, 3949			

TABLE BB. Materials Consumed by Industries—Continued

1972 material code	Material	Consuming industries (SIC code)	1972 material code	Material	Consuming industries (SIC code)
	MANUFACTURED MATERIALS--Continued			MANUFACTURED MATERIALS--Continued	
	Chemical materials--Continued			Petroleum materials--Continued	
	Drugs:		291171	Extender oils, of petroleum origin...	2821, 2822
283301	Vitamins, natural and synthetic, bulk, excluding vitamins for animal feed.	2831, 2833, 2834	291181	Foreign unfinished oils, received from foreign countries for further processing.	2911
283303	Nutrients for enrichment and fortification.	2041, 2043, 2047, 2048, 2051, 2052		Asphalt:	
283317	Sulfa drugs, bulk.....	2831, 2833, 2834	291191	Less than 200 penetration.....	2951, 2952
283318	Antibiotics for human and veterinary use, excluding antibiotics for animal feed.	2831, 2833, 2834	291195	200 and over penetration.....	2951, 2952
			295231	Asphalt roofing.....	2452
283391	Microingredients, vitamins, antibiotics, drugs, trace minerals, etc., either purchased separately or as mixtures commonly called premixes.	2047, 2048		Rubber and plastics materials:	
	Soap, cleaners, and toilet goods:		300115	Plastic, and natural and synthetic rubber cut stock and findings.	3142, 3143, 3144, 3149
284101	Soap and detergents.....	2821, 2822	300167	Rubber and plastics products, including tires and tubes.	3711, 3713, 3714, 3715
284141	Glycerin.....	2821, 2841, 2842	301101	Pneumatic and solid tires and inner tubes.	3711, 3713, 3714, 3715
	Bulk surface active agents other than sulfonated oils and fats:		301131	Pneumatic tires.....	3523, 3524, 3531, 3532, 3536
284308	Emulsifiers, wetting agents, penetrants, etc., other than primarily for detergent purposes	2841, 2842	301141	Inner tubes.....	3523, 3524
	Primarily for detergent purposes.		303101	Reclaimed rubber, excluding "mud" and crumb or ground scrap.	3011, 3021, 3031, 3041, 3069
284309	Perfume oil mixtures and blends....	2841, 2842	306931	Formed and slab stock for pillows, cushions, seating, etc., rubber.	2512
284421		2841, 2842		Rubber foam cores for mattresses, excluding topper pads.	2512, 2515
285101	Paints, varnishes, lacquers, japans, and enamels.	2434, 2452, 2511, 2512, 2514, 2517, 2521, 2522, 2531, 2541, 2542, 2599, 3411, 3412	306933	Rubber and elastomer resin soling slabs and top lift sheets-cut stock and findings.	3142, 3143, 3144, 3149
		2851	306965	Rubber compounds and mixtures, dry rubber solids content.	3011, 3021, 3031, 3041, 3069
286102	Tall oil and rosin, gum and wood....	2851	306980		
	Phosphatic materials, fertilizers:			Leather materials:	
287421	Superphosphate, used in mixed goods, normal and enriched, less than 42% P ₂ O ₅ .	2874, 2875	311100	Finished leather.....	2381, 2386, 2387, 3151, 3161, 3171, 3172, 3199, 3949
287424	Superphosphate, used in mixed goods, triple, 42% P ₂ O ₅ and over.	2874, 2875		Upper leather.....	3111, 3131
287426	Other phosphatic materials, including wet base goods, ammonium phosphates, etc.	2874, 2875	311103	Lining leather.....	3142, 3143, 3144, 3149
	Adhesives:		311104	All other upper leather.....	3142, 3143, 3144, 3149
289101	Glues and adhesives, soybean, casein, blood, albumen, synthetic resin adhesives, etc.	2435, 2436, 2641, 2642, 2643, 2645, 2646, 2647, 2648, 2649, 2651, 2652, 2653, 2654, 2655		Soling leather:	
			311105	Innersole leather.....	3111, 3131, 3142, 3143, 3144, 3149
289147	Adhesives and binders, resins.....	2297	311106	All other soling leather.....	3142, 3143, 3144, 3149
289956	Rosin sizing.....	2611, 2621	311107	Finished leather except upper and soling leather.	3111, 3131
	Explosives:		311108	Finished leather, except upper, innersole and other soling leather.	3142, 3143, 3144, 3149
289217	Smokeless powder.....	3482, 3484	313108	Leather and other cut stock and findings.	
	Printing inks:			Glass materials:	
289301	Printing inks, complete formulations	2641, 2643, 2647, 2649, 2651, 2653, 2654, 2711, 2731, 2753, 2761, 2721, 2732, 2754	320311	Glass and glass products, other than tube blanks.	3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679
289311	Letterpress printing inks, including news.	2721, 2732, 2751, 2752, 2754	320313	Glass and glass products, including lamp bulb blanks.	3641, 3645, 3646, 3647, 3648
289323	Lithographic printing inks.....	2721, 2732, 2751, 2752, 2754	321101	Flat glass plate, float, and sheet...	2511, 2514, 3442, 3443, 3444, 3446, 3448, 3449
289305	Other printing inks, including gravure, flexographic, and screen process.	2821, 2822, 3011, 3021, 3031, 3041, 3069	321111	Sheet glass.....	3211, 3229, 3231
289501	Carbon black.....		321121	Plate and float glass.....	3211, 3229, 3231
	Petroleum materials:		322101	Glass containers.....	2032, 2033, 2035, 2079, 2084, 2085, 2099, 2841, 2842
291101	Fuel oil used as raw material.....	2895		Glass containers.....	2831, 2833, 2834, 2844
291105	Petroleum thinners, naptha.....	2851	322901	Glass products, other than plate, float and sheet glass and tableware.	3229, 3231
291106	Petroleum wax.....	2641, 2643, 2653, 2654	322911	Glass tumblers, stemware and other tableware.	3229, 3231
291107	Benzol, benzene.....	2911	322921	Tube blanks.....	3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679
	Liquefied petroleum and refinery gases for chemical feedstocks:			Glass fiber, roving, mats, etc.....	3079, 3731, 3732
291164	Propane.....	2869	323150	Mirrors, framed and unframed.....	2511
291165	Ethylene.....	2821, 2865, 2869			
291166	Propylene.....	2865, 2869			
291169	Other, including mixtures.....	2865, 2869			
	Liquefied petroleum and refinery gases:				
291167	Butadiene.....	2821, 2822			
291168	Other, including isoprene, propylene, isobutylene, etc.	2821			

TABLE BB. Materials Consumed by Industries—Continued

1972 material code	Material	Consuming industries (SIC code)	1972 material code	Material	Consuming industries (SIC code)
	MANUFACTURED MATERIALS--Continued			MANUFACTURED MATERIALS--Continued	
324101	Portland cement.....	3271, 3272, 3273, 3292		Primary metal materials--Continued	
320591	Refractories:			Mill shapes and forms, except	
325501	Clay or nonclay.....	3241, 3274, 3275		castings--Continued	
	Clay.....	3211, 3221, 3229, 3312, 3313, 3321, 3322, 3324, 3325, 3361		Carbon steel--Continued	
329701	Nonclay.....	3211, 3221, 3229, 3312, 3313, 3321, 3322, 3324, 3325, 3361		Sheet and strip--Continued	3673, 3674, 3675, 3676, 3677, 3678, 3679, 3694, 3711, 3713, 3714, 3715, 3721, 3724, 3731, 3732, 3743, 3751, 3761, 3792, 3795, 3811, 3822, 3823, 3824, 3825,
327401	Lime.....	2611, 2621			
327403	Fluxes:		331013	Plates.....	3421, 3423, 3425, 3429, 3431, 3432, 3433, 3441, 3442, 3443, 3444, 3446, 3448, 3449, 3451, 3452, 3465, 3466, 3469, 3482, 3483, 3484, 3489, 3494, 3498, 3499, 3511, 3519, 3523, 3524, 3531, 3532, 3533, 3534, 3535, 3536, 3537, 3541, 3542, 3544, 3545, 3547, 3549, 3551, 3553, 3554, 3555, 3559, 3561, 3562, 3563, 3565, 3566, 3567, 3568, 3569, 3581, 3582, 3585, 3586, 3589, 3592, 3599, 3612, 3613, 3621, 3622, 3631, 3632, 3634, 3635, 3636, 3639, 3645, 3646, 3647, 3648, 3694, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3731, 3732, 3743, 3751, 3761, 3764, 3769, 3795, 3799, 3811, 3822, 3824, 3825, 3828
329503	Lime, including quicklime and dead- burned dolomite.....	3312			
329505	Limestone.....	3312			
329506	Fluorspar.....	3312			
	Other fluxes.....	3312			
327511	Gypsum building board.....	2452			
329501	Roofing granules.....	2952			
329502	Dead-burned magnesia.....	3312			
329903	Industrial diamonds.....	3541, 3542, 3544, 3545, 3546, 3547			
329905	Mica.....	3662, 3671, 3673			
	Primary metal materials:				
	Mill shapes and forms, except				
	castings:				
331001	Carbon steel.....	3699, 3861, 3914, 3942, 3944, 3949, 3963, 3964, 3999			
331009	Concrete reinforcing bars.....	3271, 3272, 3441, 3442, 3443, 3444, 3446, 3448, 3449			
331010	Bars and bar shapes, except concrete reinforcing bars.	3441, 3442, 3443, 3444, 3446, 3448, 3449			
331011	Bars and bar shapes.....	3421, 3423, 3425, 3429, 3431, 3433, 3451, 3452, 3465, 3466, 3469, 3482, 3483, 3484, 3489, 3493, 3494, 3495, 3496, 3498, 3499, 3511, 3519, 3523, 3524, 3531, 3533, 3534, 3535, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3551, 3552, 3553, 3554, 3555, 3559, 3561, 3562, 3563, 3565, 3566, 3568, 3569, 3572, 3573, 3574, 3576, 3579, 3581, 3582, 3585, 3586, 3589, 3592, 3599, 3612, 3613, 3621, 3622, 3623, 3632, 3633, 3634, 3635, 3636, 3639, 3643, 3644, 3645, 3646, 3647, 3648, 3651, 3661, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3694, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3731, 3732, 3743, 3761, 3769, 3792, 3795, 3799, 3811, 3822, 3823, 3824, 3825	331015	Structural shapes.....	3433, 3441, 3442, 3443, 3444, 3446, 3448, 3449, 3465, 3466, 3469, 3483, 3489, 3495, 3496, 3498, 3499, 3511, 3519, 3523, 3524, 3531, 3532, 3533, 3534, 3536, 3537, 3541, 3544, 3545, 3546, 3547, 3549, 3551, 3552, 3559, 3561, 3563, 3565, 3567, 3569, 3572, 3573, 3574, 3576, 3579, 3581, 3582, 3585, 3586, 3589, 3592, 3599, 3612, 3613, 3622, 3623, 3631, 3632, 3634, 3635, 3636, 3639, 3645, 3646, 3647, 3648, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3731, 3732, 3743, 3751, 3761, 3764, 3769, 3811, 3822, 3823, 3824, 3825
331012	Sheet and strip.....	2514, 2515, 2521, 2522, 2531, 2541, 2542, 2591, 2599, 2651, 2652, 2653, 2654, 2655, 3411, 3412, 3421, 3423, 3425, 3429, 3431, 3432, 3433, 3441, 3442, 3443, 3444, 3446, 3448, 3449, 3451, 3452, 3482, 3483, 3484, 3489, 3493, 3494, 3498, 3499, 3511, 3519, 3523, 3524, 3531, 3532, 3534, 3536, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3551, 3552, 3553, 3555, 3561, 3562, 3563, 3565, 3566, 3567, 3568, 3569, 3572, 3576, 3579, 3581, 3582, 3585, 3586, 3589, 3592, 3599, 3613, 3621, 3622, 3623, 3631, 3632, 3633, 3634, 3635, 3636, 3639, 3643, 3644, 3645, 3646, 3647, 3648, 3651, 3661, 3662, 3671, 3672,	331017	Wire and wire products.....	3011, 3031, 3041, 3069, 3411, 3412, 3421, 3423, 3425, 3429, 3433, 3441, 3442, 3443, 3446, 3448, 3449, 3451, 3452, 3465, 3466, 3469, 3482, 3483, 3484, 3489, 3493, 3495, 3496, 3498, 3499, 3523, 3524, 3531, 3532, 3534, 3535, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3552, 3559, 3562, 3565, 3566, 3568, 3572, 3573, 3574, 3576, 3579, 3581, 3582, 3585, 3589, 3592, 3599, 3621, 3623, 3631, 3632, 3633, 3634, 3635, 3636, 3639, 3643, 3644, 3645, 3646, 3647, 3648, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3694, 3711, 3713, 3714, 3715, 3724, 3728, 3731, 3732, 3743, 3751, 3761, 3764, 3769, 3795, 3799, 3811, 3822, 3823, 3824, 3825

331018	Tin plate, terne plate and black plate.	3411, 3412, 3465, 3466, 3469	331029	All other alloy steel, except stainless, mill shapes and forms.	3421, 3423, 3425, 3431, 3432, 3441, 3442, 3443, 3444, 3448, 3449, 3451, 3452, 3465, 3466, 3469, 3493, 3495, 3496, 3498, 3499, 3511, 3519, 3523, 3524, 3531, 3532, 3533, 3536, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3555, 3559, 3565, 3569, 3586, 3592, 3599, 3631, 3633, 3634, 3635, 3636, 3639, 3661, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3764, 3769, 3792, 3811, 3822, 3823, 3824
331041	Ingot.....	3462, 3463			
331042	Blooms, billets and slabs.....	3462, 3463			
331043	Bars.....	3462, 3463			
331019	All other carbon steel mill shapes and forms, including tubing.	2514, 2515, 2521, 2522, 2531, 2541, 2542, 2591, 2599, 3411, 3412, 3421, 3423, 3425, 3429, 3431, 3432, 3433, 3441, 3442, 3443, 3444, 3446, 3448, 3449, 3451, 3452, 3465, 3466, 3469, 3482, 3483, 3484, 3489, 3493, 3495, 3496, 3498, 3499, 3511, 3519, 3523, 3524, 3531, 3532, 3533, 3534, 3535, 3536, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3551, 3552, 3553, 3554, 3555, 3559, 3561, 3562, 3563, 3565, 3566, 3567, 3568, 3569, 3572, 3573, 3574, 3576, 3579, 3581, 3582, 3585, 3586, 3589, 3592, 3599, 3612, 3613, 3621, 3622, 3623, 3631, 3632, 3633, 3634, 3635, 3636, 3639, 3643, 3644, 3645, 3646, 3647, 3648, 3651, 3661, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3694, 3711, 3713, 3715, 3721, 3724, 3728, 3731, 3732, 3743, 3751, 3761, 3764, 3769, 3792, 3795, 3799, 3811, 3822, 3823, 3824, 3825, 3832	331031	Stainless steel.....	2514, 2521, 2522, 2531, 2541, 2542, 2599, 3552, 3612, 3694, 3699, 3743, 3792, 3832, 3963
			331033	Sheet and strip.....	3321, 3411, 3412, 3421, 3423, 3425, 3429, 3431, 3432, 3433, 3441, 3442, 3443, 3444, 3446, 3448, 3449, 3451, 3452, 3465, 3466, 3469, 3482, 3483, 3484, 3489, 3493, 3498, 3499, 3511, 3519, 3523, 3524, 3531, 3532, 3533, 3536, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3551, 3553, 3554, 3555, 3559, 3561, 3562, 3563, 3565, 3566, 3567, 3568, 3572, 3573, 3574, 3576, 3579, 3586, 3592, 3599, 3613, 3621, 3622, 3623, 3631, 3632, 3633, 3634, 3635, 3636, 3639, 3643, 3644, 3645, 3646, 3647, 3648, 3651, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3761, 3764, 3795, 3822, 3823, 3824, 3825, 3861, 3914, 3942, 3944, 3949, 3999
331020	Alloy steel, except stainless.....	2514, 2521, 2522, 2531, 2541, 2542, 2599, 3411, 3412, 3429, 3433, 3534, 3535, 3537, 3551, 3552, 3553, 3554, 3567, 3572, 3573, 3574, 3576, 3579, 3581, 3582, 3585, 3589, 3612, 3613, 3621, 3622, 3623, 3632, 3643, 3644, 3645, 3646, 3647, 3648, 3651, 3694, 3699, 3731, 3732, 3743, 3832, 3861, 3914, 3942, 3944, 3949, 3963, 3964, 3999	331047	Ingot.....	3462, 3463
			331048	Blooms, billets and slabs.....	3462, 3463
			331049	Bars.....	3462, 3463
			331050	Mill shapes and forms, other than sheet and strip.	3321, 3411, 3412, 3421, 3423, 3425, 3429, 3431, 3432, 3433, 3441, 3442, 3443, 3444, 3446, 3448, 3449, 3451, 3452, 3465, 3466, 3469, 3482, 3483, 3484, 3489, 3493, 3498, 3499, 3511, 3519, 3521, 3523, 3524, 3531, 3532, 3533, 3534, 3536, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3551, 3553, 3554, 3555, 3559, 3561, 3562, 3563, 3565, 3566, 3567, 3568, 3572, 3573, 3574, 3576, 3579, 3586, 3592, 3599, 3613, 3621, 3622, 3623, 3631, 3633, 3634, 3635, 3636, 3639, 3643, 3644, 3645, 3646, 3647, 3648, 3651, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3761, 3764, 3792, 3811, 3822, 3823, 3824, 3825, 3861, 3914, 3942, 3944, 3949, 3999
331021	Bars and bar shapes.....	3421, 3423, 3425, 3431, 3432, 3441, 3442, 3443, 3444, 3446, 3448, 3449, 3451, 3465, 3466, 3469, 3482, 3483, 3484, 3489, 3493, 3498, 3499, 3511, 3519, 3523, 3524, 3531, 3533, 3536, 3541, 3544, 3545, 3546, 3547, 3549, 3555, 3561, 3562, 3563, 3565, 3566, 3568, 3569, 3586, 3592, 3599, 3631, 3633, 3634, 3635, 3636, 3639, 3661, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3761, 3764, 3792, 3811, 3822, 3823, 3824, 3825			
331044	Ingot.....	3462, 3463			
331045	Blooms, billets and slabs.....	3462, 3463			
331046	Bars.....	3462, 3463			

TABLE BB. Materials Consumed by Industries—Continued

1972 material code	Material	Consuming industries (SIC code)	1972 material code	Material	Consuming industries (SIC code)
	MANUFACTURED MATERIALS--Continued			MANUFACTURED MATERIALS--Continued	
	Primary metal materials--Continued			Primary metal materials--Continued	
	Mill shapes and forms, except castings--Continued			Iron and steel castings, rough and semifinished--Continued	
331005	Miscellaneous steel mill shapes: Ingots, semifinished shapes (blooms, billets, etc.) and other steel mill shapes received for further processing, exclud- ing rails for rerolling and rods and wire for drawing or redrawing.	3312, 3315		Iron, gray and malleable--Con.	3552, 3553, 3554, 3555, 3559, 3561, 3562, 3563, 3565, 3566, 3568, 3569, 3581, 3582, 3585, 3586, 3589, 3592, 3599, 3621, 3631, 3632, 3633, 3634, 3635, 3636, 3639, 3643, 3644, 3645, 3646, 3647, 3648, 3694, 3711, 3713, 3714, 3715, 3743, 3795, 3799
331025	Alloy steel, including stainless.	2591, 3751, 3799			
331051	Pig iron, excluding silvery iron....	3312, 3321, 3322, 3324, 3325, 3361, 3362, 3369, 3431, 3432, 3433, 3494, 3523, 3531, 3532, 3536, 3552, 3554, 3559, 3561, 3563, 3569, 3694, 3711, 3714, 3715	332161 332045	Gray iron ingot molds and stools... Steel castings.....	3312 3293, 3312, 3313, 3315, 3316, 3317, 3321, 3322, 3324, 3325, 3361, 3362, 3369, 3421, 3423, 3425, 3429, 3431, 3432, 3441, 3442, 3443, 3444, 3446, 3448, 3449, 3451, 3452, 3482, 3483, 3484, 3489, 3494, 3495, 3496, 3498, 3499, 3511, 3519, 3523, 3524, 3531, 3532, 3533, 3534, 3535, 3536, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3551, 3553, 3554, 3559, 3561, 3562, 3563, 3565, 3566, 3567, 3568, 3569, 3572, 3573, 3574, 3576, 3579, 3585, 3586, 3592, 3599, 3612, 3613, 3621, 3622, 3632, 3645, 3646, 3647, 3648, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3731, 3732, 3743, 3751, 3761, 3764, 3769, 3792, 3795, 3799, 3811, 3822, 3823, 3824, 3825, 3832, 3851
331061	Steel for drawing wire: Rods: Carbon steel.....	3315			
331063	Alloy steel, except stainless....	3315			
331065	Stainless steel.....	3315			
331079	Other steel mill shapes for drawing wire.	3315			
331073	Wire for redrawing: Carbon steel.....	3315			
331075	Alloy steel, except stainless....	3315			
331077	Stainless steel.....	3312, 3313, 3315			
331079	See above, under Steel for drawing wire				
331081	Steel rails for rerolling.....	3315			
331091	Steel wire strand and bars or rods, high strength, stress relieved.	3271, 3272			
331092	Welded wire concrete reinforcing mesh, steel.	3271, 3272			
331094	Steel strip and wire.....	2782, 2789			
331210	Coke, including breeze.....	2812, 2819			
331312	Ferroalloys: Ferromanganese.....	3312, 3313, 3321, 3322, 3325, 3361, 3362, 3369			
331320	Ferrochromium.....	3312, 3313, 3315, 3321, 3322, 3324, 3325, 3361, 3362, 3369	333010	Primary smelter and refinery materi- als, nonferrous: Nonferrous plating metals, chro- mium, nickel, zinc, etc.	3498, 3499
331330	Ferrosilicon, over 6 percent silicon.	3312, 3313			
331340	Spiegeleisen.....	3312	333111	Copper: Blister or anode copper.....	3331, 3332, 3333, 3334, 3339, 3341
331343	Ferromolybdenum.....	3312, 3313	333113	Copper, including both refined unalloyed and copper-base raw materials, pig, ingot, shot, etc.	3312, 3313, 3315, 3316, 3317, 3351, 3353, 3355, 3356, 3357
331345	Ferronickel.....	3312	333121	Copper, unalloyed, cathodes, ingot, cakes, slabs, etc.	3321, 3322, 3324, 3325, 3331, 3332, 3333, 3334, 3339, 3341, 3351, 3353, 3354, 3355, 3356, 3357, 3361, 3362, 3369
331351	Ferrotungsten.....	3312			
331353	Ferrovanadium.....	3312	333122	Copper and copper-base alloy refinery shapes.	3429, 3431, 3432, 3494, 3561, 3562, 3563, 3566, 3568, 3586, 3621, 3643, 3644
331309	Other ferroalloys, except ferro- manganese and ferrochromium, but including silvery iron.	3321, 3322, 3324, 3325, 3361, 3362, 3369			
331342	Other ferroalloys, including silvery iron.	3312, 3313	333125	Copper and copper-base alloy wire bar.	3357
332011	Iron and steel castings, rough and semifinished: Iron, gray and malleable.....	3421, 3423, 3425, 3429, 3431, 3432, 3433, 3441, 3442, 3443, 3444, 3446, 3448, 3449, 3451, 3452, 3465, 3466, 3469, 3483, 3484, 3489, 3494, 3498, 3499, 3511, 3519, 3523, 3524, 3531, 3532, 3533, 3534, 3535, 3536, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3551,	333232 333233 333234 333341	Lead: Lead, ingot, pig, shot, etc..... Refined unalloyed lead..... Antimonial lead..... Zinc: Refined unalloyed zinc.....	3312, 3313, 3315, 3316, 3317, 3351, 3353, 3354, 3355, 3356, 3357 3331, 3332, 3333, 3334, 3339, 3341, 3691, 3692 3691, 3692 3331, 3332, 3333, 3334, 3339, 3341

TABLE BB. Materials Consumed by Industries--Continued

1972 material code	Material	Consuming industries (SIC code)	1972 material code	Material	Consuming industries (SIC code)
	MANUFACTURED MATERIALS--Continued			MANUFACTURED MATERIALS--Continued	
	Primary metal materials--Continued			Primary metal materials--Continued	
	Primary smelter and refinery materi- als, nonferrous--Continued			Primary smelter and refinery materi- als--Continued	
333348	Zinc--Continued Zinc and zinc-base alloy refin- ery shapes.	2812, 2816, 2819, 2842, 2865, 2869, 2873, 2874, 3312, 3313, 3315, 3316, 3317, 3321, 3322, 3324, 3325, 3351, 3353, 3354, 3355, 3356, 3357, 3429, 3441, 3442, 3443, 3444, 3446, 3448, 3449, 3465, 3466, 3469, 3495, 3496		Mill shapes and forms: Copper and copper-base alloys--Continued Rod, bar and mechanical wire, including extruded and/or drawn shapes--Continued	3636, 3639, 3643, 3644, 3645, 3646, 3647, 3648, 3661, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3694, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3731, 3732, 3743, 3761, 3764, 3769, 3792, 3795, 3811, 3822, 3823, 3824, 3825
333401	Aluminum: Aluminum and aluminum-base alloy refinery shapes, ingot, slugs, etc.	3429, 3431, 3432, 3441, 3442, 3443, 3444, 3446, 3448, 3449, 3497, 3499, 3511, 3519, 3612, 3621, 3643, 3644, 3645, 3646, 3647, 3648, 3694, 3711, 3713, 3714, 3715	335109	Mill shapes and forms, includ- ing mechanical wire, exclud- ing rods, wire for redrawing, and bare wire.	3357
333402	Aluminum ingot, pig, shot, etc...	3312, 3313, 3315, 3316, 3317		Wire for redrawing.....	3357
333404	Aluminum, unalloyed, ingot, pig, shot, etc.	3321, 3322, 3324, 3325, 3351, 3353, 3354, 3355, 3356, 3357	335112 335105	Copper and copper-base alloy mill shapes and forms.	3533, 3551, 3552, 3581, 3582, 3589, 3641, 3699, 3861, 3914, 3949, 3963, 3964, 3999
333405	Aluminum-base alloys, ingot, pig, shot, etc.	3321, 3322, 3324, 3325, 3351, 3353, 3354, 3355, 3356, 3357, 3362, 3369		Plate, sheet, and strip, including military cups and disc.	3421, 3423, 3425, 3429, 3431, 3432, 3433, 3441, 3442, 3443, 3446, 3448, 3449, 3451, 3452, 3465, 3466, 3469, 3482, 3483, 3484, 3489, 3494, 3495, 3496, 3498, 3499, 3511, 3519, 3523, 3524, 3531, 3532, 3534, 3535, 3536, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3554, 3555, 3559, 3561, 3562, 3563, 3565, 3566, 3567, 3568, 3569, 3585, 3586, 3592, 3599, 3612, 3613, 3621, 3622, 3623, 3624, 3629, 3631, 3632, 3633, 3634, 3635, 3639, 3643, 3644, 3645, 3646, 3647, 3648, 3661, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3694, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3731, 3732, 3761, 3764, 3769, 3811, 3822, 3823, 3824, 3825
333471	Aluminum and aluminum-base alloy ingot.	3331, 3332, 3333, 3334, 3339, 3341, 3462, 3463	335143		
333903	Other nonferrous metals: Precious metals, all forms, in- cluding ingot, sheet, strip, solder, plating, electrodes, etc.	3914			
333909	Nonferrous metals and alloys, other than aluminum, copper, lead, zinc, nickel, magnesium, tin, molybdenum, vanadium, and tungsten.	3351, 3353, 3354, 3355, 3356, 3357			
333971	Nickel, excluding ferronickel, ingot, pig, shot, etc.	3312, 3313, 3315, 3316, 3317, 3351, 3353, 3354, 3355, 3356, 3357			
333973	Magnesium and magnesium-base alloys, ingot, pig, shot, etc.	3321, 3322, 3324, 3325, 3351, 3353, 3354, 3355, 3356, 3357, 3361, 3362			
333975	Tin, ingot, pig, shot, etc.....	3312, 3313, 3315, 3316, 3317			
333976	Refined unalloyed tin.....	3331, 3332, 3333, 3334, 3339, 3341, 3357			
333979	Germanium.....	3621, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679			
333981	Molybdenum and molybdenum-base alloys.	3351			
333982	Cobalt refinery shapes.....	3312			
333983	Tin and tin-base alloys.....	3351, 3353, 3356	335133	Rods: Copper, unalloyed.....	3357
333985	Vanadium and vanadium-base alloys..	3351, 3353, 3356	335133	Copper-base alloy.....	3357
333987	Tungsten and tungsten-base alloys..	3356			
334123	Copper-base alloy raw materials, ingot, billets, shot, waffle, hardeners, etc.	3321, 3322, 3324, 3325, 3361, 3362, 3369	335152	Pipe and tube.....	3421, 3423, 3425, 3429, 3431, 3432, 3433, 3441, 3442, 3443, 3446, 3448, 3449, 3451, 3452, 3465, 3466, 3469, 3482, 3483, 3484, 3489, 3494, 3495, 3496, 3498, 3499, 3511, 3519, 3523, 3524, 3531, 3532, 3534, 3535, 3536, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3554, 3555, 3559, 3561, 3563, 3565, 3566, 3567, 3568, 3569, 3585, 3586, 3592, 3599, 3612, 3613, 3621, 3622, 3623, 3624, 3629, 3631, 3632, 3633, 3634, 3635, 3639, 3643, 3644, 3645, 3646, 3647, 3648, 3661, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3694, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3731, 3732, 3761, 3764, 3769, 3811, 3822, 3823, 3824, 3825, 3832
	Rolled, drawn, and extruded nonfer- rous metal materials: Mill shapes and forms: Copper and copper-base alloys:				
335100	Brass mill shapes, rod, bar, sheet, etc.	3351, 3355, 3356			
335102	Rod, bar and mechanical wire, including extruded and/or drawn shapes.	3421, 3423, 3425, 3429, 3431, 3432, 3433, 3441, 3442, 3443, 3444, 3446, 3448, 3449, 3451, 3452, 3465, 3466, 3469, 3482, 3483, 3484, 3489, 3494, 3495, 3496, 3498, 3499, 3511, 3519, 3523, 3524, 3531, 3532, 3534, 3535, 3536, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3554, 3555, 3559, 3561, 3562, 3563, 3565, 3566, 3567, 3568, 3569, 3585, 3586, 3592, 3599, 3612, 3613, 3621, 3622, 3623, 3624, 3629, 3631, 3632, 3633, 3634, 3635,	335107	Forging stock.....	3463

TABLE BB. Materials Consumed by Industries—Continued

1972 material code	Material	Consuming industries (SIC code)	1972 material code	Material	Consuming industries (SIC code)		
	MANUFACTURED MATERIALS--Continued			MANUFACTURED MATERIALS--Continued			
	Primary metal materials--Continued			Primary metal materials--Continued			
	Rolled, drawn, and extruded nonfer- rous metal materials--Continued			Rolled, drawn, and extruded nonfer- rous metal materials--Continued			
	Mill shapes and forms--Continued			Mill shapes and forms--Continued			
	Aluminum and aluminum-base alloy:			Aluminum and aluminum-base			
335301	Sheet, plate and foil.....	2514, 2591, 3411, 3412, 3421, 3423, 3425, 3429, 3433, 3441, 3442, 3443, 3444, 3446, 3448, 3449, 3451, 3452, 3465, 3466, 3469, 3482, 3483, 3484, 3489, 3495, 3496, 3498, 3499, 3523, 3524, 3531, 3532, 3534, 3535, 3536, 3537, 3541, 3542, 3544, 3545, 3546, 3549, 3551, 3552, 3555, 3559, 3564, 3565, 3567, 3569, 3572, 3573, 3574, 3576, 3579, 3581, 3582, 3585, 3586, 3589, 3592, 3599, 3612, 3613, 3621, 3622, 3624, 3629, 3631, 3632, 3633, 3634, 3635, 3636, 3639, 3643, 3644, 3645, 3646, 3647, 3648, 3651, 3661, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3694, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3731, 3732, 3743, 3751, 3761, 3764, 3769, 3792, 3795, 3799 3811, 3822, 3823, 3824, 3825, 3949			alloys--Continued		
				Wire, rolled rod and bar, pow- ders, welded tubing, extruded shapes, etc.--Continued	3552, 3555, 3559, 3561, 3563, 3565, 3567, 3569, 3572, 3573, 3574, 3576, 3579, 3581, 3582, 3585, 3586, 3589, 3592, 3599, 3612, 3613, 3621, 3622, 3623, 3624, 3629, 3631, 3632, 3633, 3634, 3635, 3636, 3639, 3643, 3644, 3645, 3646, 3647, 3648, 3651, 3661, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3694, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3731, 3732, 3743, 3751, 3761, 3764, 3769, 3792, 3795, 3799, 3811, 3822, 3823, 3824, 3825, 3832, 3851, 3949		
			335511	Wire for redrawing.....	3357		
			335335	Aluminum foil, plain.....	2641, 2643, 2647, 2648, 2649, 2651, 2652, 2653, 2654, 2655, 3497, 3499		
			335009	Rods.....	3357		
				Other nonferrous metals:			
				Titanium and titanium-base alloy:			
			335627	Ingot.....	3462, 3463		
335303	Sheet and plate.....	2654, 2655, 3497	335628	Mill shapes.....	3462, 3463, 3721, 3724, 3728, 3761, 3764, 3769		
335304	Sheet, plate and foil.....	3351, 3353, 3354, 3355, 3356	335691	Tantalum mill products.....	3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679		
335405	Extruded shapes, including extruded rod, bar, pipe, tube, etc.	2514, 2591, 3293, 3321, 3429, 3431, 3432, 3441, 3442, 3443, 3444, 3446, 3448, 3449, 3451, 3452, 3465, 3466, 3469, 3482, 3483, 3484, 3489, 3494, 3495, 3496, 3498, 3499, 3519, 3523, 3524, 3531, 3533, 3534, 3535, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3552, 3559, 3561, 3563, 3565, 3569, 3572, 3573, 3574, 3576, 3579, 3585, 3586, 3592, 3599, 3612, 3613, 3621, 3622, 3624, 3629, 3631, 3632, 3634, 3635, 3636, 3639, 3643, 3644, 3645, 3646, 3647, 3648, 3651, 3661, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3711, 3714, 3715, 3721, 3724, 3728, 3731, 3732, 3743, 3751, 3761, 3764, 3769, 3792, 3795, 3799, 3811, 3822, 3823, 3824, 3825, 3832, 3949		335693	Molybdenum and molybdenum-base alloy forging stock.	3462, 3463, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679	
			335616	Nickel and nickel-base alloy mill shapes and forms.	3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679		
			335697	Zinc and zinc-base alloy mill shapes and forms.	3691, 3692		
			335608	Nonferrous wire for redrawing, other than copper and aluminum and their alloys.	3357		
			335609	Nonferrous metal, except copper and aluminum mill shapes, ex- cept rods, wire for redrawing, and bare wire.	3357		
			335698	Vanadium and vanadium-base alloy forging stock.	3462, 3463		
			335699	Manganese and manganese-base alloy forging stock.	3462, 3463		
				Drawn wire materials:			
				Aluminum and aluminum-base alloy:			
			335718	Barewire, except wire for redrawing.	3357		
			335791	Insulated wire and cable, aluminum content.	3612, 3613, 3621, 3622, 3623, 3624, 3629, 3631, 3633, 3634, 3635, 3636, 3639, 3645, 3646, 3647, 3648, 3651, 3661, 3662, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3694, 3699		
335406	Extruded shapes.....	3351, 3353, 3354, 3355, 3356, 3357					
335007	Mill shapes and forms, other than rod, wire for redrawing, and bare wire.	3357					
335001	Mill shapes and forms.....	2521, 2522, 2531, 3341, 2542, 2599, 3351, 3353, 3354, 3355, 3356, 3357, 3462, 3463, 3511, 3519, 3533, 3699, 3861, 3942, 3944, 3962, 3963, 3964, 3999	335725	Copper and copper-base alloy: Bare wire, electrical, except wire for redrawing.	3357		
			335728	Bare wire, for electrical conduction only.	3429, 3451, 3452, 3465, 3466, 3469, 3511, 3519, 3542, 3544, 3545, 3546, 3549, 3572, 3573, 3574, 3576, 3579, 3585, 3612, 3613, 3621, 3622, 3623, 3624, 3629, 3631, 3632, 3633, 3634, 3635, 3636, 3639, 3643, 3644, 3645, 3646, 3647, 3648, 3651, 3661, 3662, 3671, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3694, 3699, 3711, 3713, 3714, 3715, 3721, 3728, 3731, 3743, 3761, 3764, 3811, 3822, 3823, 3824, 3825		
335008	Wire, rolled rod and bar, pow- ders, welded tubing, extruded shapes, etc.	2514, 2591, 3293, 3321, 3411, 3412, 3421, 3423, 3425, 3429, 3431, 3432, 3433, 3441, 3442, 3443, 3444, 3446, 3448, 3449, 3451, 3452, 3465, 3466, 3469, 3482, 3483, 3484, 3489, 3494, 3495, 3496, 3497, 3498, 3499, 3519, 3523, 3524, 3531, 3532, 3534, 3535, 3536, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3551,					

TABLE BB. Materials Consumed by Industries—Continued

1972 material code	Material	Consuming industries (SIC code)	1972 material code	Material	Consuming industries (SIC code)
	MANUFACTURED MATERIALS--Continued			MANUFACTURED MATERIALS--Continued	
	Primary metal materials--Continued			Primary metal materials--Continued	
	Rolled, drawn, and extruded nonferrous metal materials--Continued			Rolled, drawn, and extruded nonferrous metal materials--Continued	
	Drawn wire materials--Continued			Forgings--Continued	
335790	Copper and copper-base alloy--Con. Insulated wire and cable, copper content.	3357, 3432, 3483, 3484, 3489, 3494, 3498, 3499, 3511, 3519, 3531, 3532, 3534, 3535, 3536, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3555, 3561, 3563, 3572, 3573, 3574, 3576, 3579, 3585, 3586, 3612, 3613, 3621, 3622, 3623, 3624, 3629, 3631, 3633, 3634, 3639, 3643, 3644, 3645, 3646, 3647, 3648, 3651, 3661, 3662, 3671, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3694, 3699, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3731, 3732, 3761, 3764, 3769, 3792, 3795, 3811, 3822, 3823, 3824, 3825	346310	Aluminum and aluminum-base alloy.	3561, 3562, 3563, 3566, 3568, 3585, 3586, 3621, 3632, 3711, 3713, 3715, 3721, 3724, 3728, 3743, 3751, 3761, 3764, 3769, 3795, 3799
			346326	Titanium and titanium-base alloy.	3483, 3484, 3489, 3498, 3499, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3761, 3764, 3769
			339913	Ferrite (powders and paste).....	3721, 3724, 3728, 3769
			339915	Metal powders.....	3651, 3662, 3673
					3429, 3523, 3524, 3546, 3549, 3562, 3566, 3568, 3585, 3662, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3711, 3714
			340001	Fabricated metal materials: Metal containers.....	2043, 2045, 2047, 2048, 2091, 2092, 2831, 2833, 2834, 2841, 2842, 2844, 2851, 2911, 2992
335733	Tungsten wire.....	3662, 3671, 3673, 3674, 3675, 3676, 3677, 3678, 3679	340003	Metal containers, excluding drums....	2077, 2079
			341101	Metal cans.....	2032, 2033, 2037, 2038
			342901	Hardware: Furniture and builders' hardware, including cabinet hardware, casters, glides, handles, hinges, locks, etc.	2434, 2512, 2514, 2517, 2521, 2522, 2531, 2541, 2542, 2599
336100	Nonferrous castings, rough and semifinished: Aluminum and aluminum-base alloy.	3421, 3423, 3425, 3429, 3431, 3432, 3433, 3441, 3442, 3443, 3444, 3448, 3449, 3465, 3466, 3469, 3483, 3484, 3489, 3494, 3498, 3499, 3511, 3519, 3523, 3524, 3531, 3532, 3534, 3535, 3536, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3551, 3552, 3553, 3555, 3559, 3561, 3562, 3563, 3566, 3568, 3569, 3572, 3576, 3579, 3581, 3582, 3586, 3589, 3592, 3599, 3634, 3639, 3643, 3644, 3445, 3646, 3647, 3648, 3651, 3661, 3662, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3694, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3731, 3732, 3743, 3751, 3761, 3764, 3769, 3792, 3795, 3799, 3811, 3822, 3823, 3824, 3825, 3832, 3861, 3941	342940	Builders' hardware, including doors, locks, locksets, lock trim, miscellaneous sash, screen, and shelf hardware; hinges and butts; hangers, tracks, and related items; cabinet hardware, and all other builders' hardware.	2431, 2434, 2439, 2452
			342983	Trunk and luggage hardware, includ- ing locks.	3161, 3171, 3172, 3199
			342986	Hose fittings and couplings.....	2891, 3011, 3021, 3031, 3041, 3069, 3293
				Fabricated structural metal: For buildings:	
			344112	Iron and steel.....	2439, 2452
			344117	Aluminum.....	2439, 2452
			344211	Doors and door units.....	2439, 2452
			344221	Windows and window units.....	2439, 2452
			344451	Aluminum siding.....	2452
			345240		
			346901	Metal stampings.....	3631, 3634, 3635, 3636, 3639
			349535	Constructions for dual-purpose sleep furniture.	2426, 2512, 2515
336200	Copper and copper-base alloy.....	3429, 3431, 3432, 3433, 3465, 3466, 3469, 3494, 3498, 3499, 3511, 3531, 3532, 3533, 3536, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3551, 3559, 3561, 3562, 3563, 3565, 3566, 3568, 3569, 3581, 3582, 3585, 3586, 3589, 3592, 3599, 3613, 3621, 3622, 3623, 3632, 3633, 3643, 3644, 3645, 3646, 3647, 3648, 3662, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3694, 3711, 3713, 3714, 3721, 3724, 3728, 3731, 3732, 3761, 3764, 3811, 3822, 3823, 3824, 3825, 3999,	349538	Springs, innerspring units, and box spring constructions.	2426, 2512, 2514, 2515
			349401	Valves and pipe fittings, except plumbers' brass goods and fittings.	3498, 3499
			349702	Aluminum foil, converted, metal content.	2641, 2643, 2647, 2648, 2649, 3497, 3499
			349704	Foil and foil laminates.....	2732, 2751, 2752, 2753, 2754, 2795
				Fabricated pipe and fittings: Iron and steel.....	2439, 2452
			349801		
			349803	Copper and copper-base alloy.....	2439, 2452
				Machinery, except electrical: Engines, except aircraft:	
			351901	Gasoline and other carburetor.....	3321, 3519, 3523, 3524, 3531, 3532, 3534, 3535, 3536, 3537, 3546, 3547, 3549, 3621, 3731, 3732, 3799
			351920	Diesel and semidiesel.....	3321, 3519, 3523, 3524, 3531, 3532, 3533, 3536, 3546, 3547, 3549, 3561, 3563, 3621, 3731, 3732, 3743, 3799
346200	Forgings: Iron and steel.....	3421, 3423, 3425, 3431, 3432, 3463, 3463, 3483, 3484, 3489, 3494, 3498, 3499, 3511, 3519, 3523, 3524, 3531, 3532, 3533, 3534, 3535, 3536, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3553,	355911	Parts and attachments for chemical industries machinery and equipment.	2812, 2816, 2819, 2842, 2865, 2869, 2874
			356120	General industrial machinery: Hydraulic fluid power pumps, motors, and related hydraulic equipment.	3721, 3724, 3728, 3761, 3764, 3769
			356200	Ball and roller bearings.....	3743

TABLE BB. Materials Consumed by Industries—Continued

1972 material code	Material	Consuming industries (SIC code)	1972 material code	Material	Consuming industries (SIC code)
	MANUFACTURED MATERIALS--Continued			MANUFACTURED MATERIALS--Continued	
356201	Machinery, except electrical--Continued General industrial machinery--Con. Ball and roller bearings--Continued Roller bearings.....	3321, 3433, 3482, 3483, 3484, 3489, 3511, 3519, 3523, 3524, 3531, 3532, 3533, 3534, 3535, 3536, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3551, 3552, 3553, 3554, 3555, 3559, 3561, 3562, 3563, 3566, 3568, 3569, 3572, 3573, 3574, 3576, 3579, 3585, 3586, 3612, 3621, 3632, 3694, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3751, 3761, 3764, 3769, 3795, 3799, 3811, 3821, 3823, 3824, 3825, 3832	362120	Electrical equipment and supplies--Con. Electric motors and generators--Con. Integral horsepower motors and generators, 1 horsepower and over.	3433, 3511, 3519, 3523, 3524, 3531, 3532, 3534, 3535, 3536, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3551, 3552, 3553, 3554, 3555, 3559, 3561, 3563, 3569, 3572, 3573, 3574, 3576, 3579, 3581, 3582, 3585, 3586, 3589, 3621, 3631, 3632, 3633, 3634, 3635, 3636, 3639, 3721, 3724, 3728, 3731, 3732, 3743, 3761, 3764, 3769
356218	Ball bearings.....	3321, 3433, 3482, 3484, 3489, 3511, 3519, 3523, 3524, 3531, 3532, 3533, 3534, 3535, 3536, 3537, 3541, 3542, 3544, 3545, 3546, 3547, 3549, 3551, 3552, 3553, 3554, 3559, 3561, 3562, 3563, 3566, 3568, 3569, 3572, 3573, 3574, 3576, 3579, 3585, 3586, 3612, 3621, 3632, 3694, 3711, 3713, 3714, 3715, 3721, 3724, 3728, 3751, 3761, 3764, 3769, 3795, 3799, 3811, 3821, 3823, 3824, 3825, 3832	362200 362209 362406 364301 367010 367012 367200 367408	Industrial electrical control equipment: Purchased from other companies.... Received from other plants of the company. Carbon and graphite electrodes and other carbon and graphite products for electrical use. Appliance outlets, switches, lampholders, and other current-carrying wiring devices. Electronic components and accessories: Electron tubes: Electron tubes, except X-ray.... Electron tubes, except X-ray and cathode ray tubes. Cathode ray picture tubes..... Solid state semiconductors.....	3613, 3622 3613, 3622 3691, 3692 3572, 3573, 3574, 3576, 3579 3661, 3662, 3672, 3674, 3675, 3676, 3677, 3678, 3679, 3811, 3822, 3823, 3824, 3825, 3861 3651 3572, 3573, 3574, 3576, 3579, 3621, 3629, 3643, 3651, 3661, 3662, 3671, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3811, 3822, 3823, 3824, 3825, 3861 3651, 3661, 3662, 3671, 3673, 3674, 3675, 3676, 3677, 3678, 3679 3573, 3574, 3576

941259	Other fibrous materials, including rags, straw and bagasse.	2611, 2621, 2631, 2661			
970001	Materials, ingredients, containers, and supplies used in grain distilling operations, cooperage, etc.	2085			
970002	Materials, ingredients, containers, and supplies used in bottling operations, flavors, closures, etc.	2085	999813	Lead and lead-base alloy.....	3332, 3341
970005	Containers and wrapping materials....	2051, 2052	999814	Zinc and zinc-base alloy, including drosses and skimmings.	3333, 3341, 3351
970011	Containers and other packaging supplies.	3142, 3143, 3144, 3149	999815	Tinplate scrap, including shredded steel can scrap.	3341
970015	Paperboard containers and converted flexible packaging materials.	2067, 2065, 2066	999816	Cullet, glass scrap.....	3211, 3221, 3229
970089	Materials received from petroleum refineries and lube manufacturers.	2911, 2992, 2999	999821	Inert fillers, secondary plant food, and soil conditioners including sand, limestone, peat, nut hulls, citrus meals, etc.	2874, 2875
970099	All other materials and components, parts, containers, and supplies, other than materials otherwise specified on report forms.	All industries	999823	Wool noils and waste.....	2291, 2294
			999825	New and used rags, clips, etc.....	2294

SECTION I—Continued

CHAPTER 1. **Foods**

GENERAL

This chapter presents data on selected important materials used primarily in the food manufacturing industries. Characteristically, many of these materials are used for similar purposes both in manufacturing and nonmanufacturing establishments. For example, flour is consumed in bakeries, which are classified in manufacturing, and also in retail bakery products stores, which are not classified in manufacturing. In addition, substantial quantities of many of these materials are consumed directly by households. The discussion and tables that follow relate only to industrial consumption, that is, consumption in the manufacturing sector as defined in the Standard Industrial Classification Manual.

SUGAR

In addition to the sugar consumed in manufacturing establishments, as shown in table 1C, substantial quantities are consumed in households, restaurants, hotels, retail bakeries, and wholesale trade establishments in making various food preparations.

DAIRY PRODUCTS

The data shown in table 1D represent only the quantity purchased (or transferred from one establishment to another). There is also a substantial production of skim milk produced and consumed in the same plant which is not reflected in these tables.

TABLE 1A. Grains Consumed by Selected Industry: 1972 and 1967

SECTION I—Continued

CHAPTER 2. Textiles

GENERAL

This chapter includes data on materials primarily consumed by establishments classified in Major Group 22, Textile Mill Products, and for broadwoven fabrics primarily consumed by establishments classified in Major Group 23, Apparel and Other Textile Products, as well as other industries consuming significant quantities of piece goods.

FIBER CONSUMPTION

The fiber consumption data shown are based on information collected in the census of manufactures. All industries consuming significant amounts of fiber reported these data, except for industry group 225, Knitting Mills, and industry group 227, Floor Covering Mills. Detailed consumption figures are published in the monthly Current Industrial Reports series, M22D, Consumption on the Woolen and Worsted Systems, and M22P, Cotton, Manmade Fiber Staple, and Linters.

BROADWOVEN FABRICS (PIECE GOODS)

The statistics shown in table 2C, were previously published in the final Industry series, table 7A, "Materials Consumed by Kind." In each of the individual table 7A's, detailed materials data were collected for piece goods and other materials. However, in each industry a portion of the total cost of materials was not specified by kind. Part of this portion was

the total cost of materials for small establishments reporting on "short forms" where separate figures for individual materials consumed were not requested. The rest was the total cost of materials reported for those establishments which failed to report cost of individual materials on the "standard forms." The "cost of materials not specified by kind" would, therefore, include the quantity and cost of piece goods consumed by a number of establishments.

For some industries, the quantity data for relatively small costs of fabrics were not available. Those quantities were estimated based on the unit value reported by a closely related industry.

The fabric consumption data for the rubber industries SIC 3011, 3021, 3031, and 3069, were collected in millions of pounds instead of millions of yards, which was the unit of measure for all other industries shown in this table. A satisfactory conversion factor was not available expressing pound figures in yards. Therefore, the quantities in pounds were added to the quantities in yards reported by the other industries to obtain some approximate total figures. The resulting figures are consequently understated because the fabric consumed probably exceeded 1 yard per pound.

For some industries, the materials consumed inquiries requested separate data by type of fiber, such as cotton fabrics or rayon fabrics. For other industries, the breakdown was by kind of fabric, such as upholstery material or bed ticking. Because of this varying collection measure, it is not possible to obtain a breakdown of the total fabric consumption in all industries by type of fiber or fabric consumed.

SECTION I—Continued

CHAPTER 3. **Newsprint and Paperboard Containers**

GENERAL

This chapter presents data on materials consumed by establishments classified in Major Group 26, Paper and Allied Products, and Major Group 27, Printing and Publishing industries, as well as data on industries consuming \$1 million worth of boxes and containers. Comments on individual groups of materials are shown below. The two tables in this chapter have been prepared in the interest of presenting a more comprehensive picture of the consumption of "complete coverage" material.

NEWSPRINT

Table 3A shows the U.S. consumption of newsprint in 1972 and 1967 by industries and delivered cost. Where available, the corresponding tonnages purchased are also shown. Table 3A also presents newsprint consumed by the publishing industries as well as the book manufacturing industry during 1972 and 1967.

PAPER AND BOARD

Paper consumption statistics for the printing and publishing industries appear in the final Industry series. Except for newsprint, grade detail was not collected from the printing industries, since printers generally have demonstrated their inability to furnish more detailed information based on a reportable canvass made prior to the 1958 Census of Manufactures. Therefore, with the exception of newsprint, quantity and cost information cannot be presented on a uniform basis for all consuming industries, for which consumption data were collected.

BOXES AND CONTAINERS

Table 3B presents the reported delivered cost of paperboard boxes and containers for all industries consuming \$1 million worth of containers in 1972. Where available, the 1967 reported cost figures are also presented. The data in this table, which also appear in the final Industry series table 7A's, is shown in the interest of a more composite presentation of information on containers.

TABLE 3A. Newsprint (262111 and 262112) Consumed by Selected Industry:
1972 and 1967

SECTION I—Continued

CHAPTER 4. Chemicals and Rubber

GENERAL

This chapter includes data on materials primarily consumed by establishments classified in Major Group 28, Chemicals and Allied Products, Major Group 29, Petroleum and Coal Products, and Major Group 30, Rubber and Miscellaneous Plastics Products. Comments on individual materials or groups of materials are shown below.

SULFUR, NATIVE AND RECOVERED

The total for sulfur consumption shown in table 4A is less than the "apparent consumption" figures published by the Bureau of Mines, Department of the Interior, because Census information was not requested from certain manufacturing establishments, principally those classified in Major Group 30, in the Manufacturing Industries, N.E.C. (industry 3999), and the Drugs industries (industry group 283).

CHEMICALS

Consumption data shown for the specified chemicals in table 4A represent a varying proportion of the U.S. total production. The coverage for ammonia is relatively low because Census figures exclude quantities used for direct

application to the soil. Coverage for sodium hydroxide (caustic soda) is low because information was not collected from plants classified in the textile, rubber reclaiming, vegetable oil refineries, and other miscellaneous industries.

In making any comparison of the quantity consumed with total supply of a specified chemical, account should be taken of the factors discussed in the text covering the materials consumption tables. Also consideration should be given to the variations in handling consumption data for inorganic chemicals produced and consumed in the same establishment. The statistics showing "consumption" by industry indicate purchases or receipts from other establishments separate from the quantities produced and consumed.

RUBBER

The figures for natural, synthetic, and reclaimed rubber shown in table 4B are limited to the establishments classified in the specified industries. Estimates of total rubber consumption for all industries are published by the Census Bureau in Current Industrial Reports series M30A, Rubber, Supply and Distribution for the United States. Based on the 1972 figures shown in series M30A, the establishments classified in the industries covered by the census used approximately 90 percent of total rubber consumed.

CHAPTER 5. Metals

GENERAL

This chapter presents data on the consumption of selected metal mill shapes and forms, castings, forgings, refinery shapes, and scrap.

MILL SHAPES, CASTINGS, AND FORGINGS

The materials used by the metal fabricating industries in producing machinery, automobiles, and thousands of other products consist primarily of metal mill shapes and forms, castings, and forgings. The tables show the cost and quantity of consumption, of the most important of these metals—iron and steel, aluminum and aluminum-base alloys, and copper and copper-base alloys. No data are available for copper and copper-base alloy forgings.

The steel mill shapes are shown separately for three grades of steel: carbon, alloy, and stainless. Carbon steel is subdivided into six shapes; alloy steel and stainless steel are divided in two shapes each.

The copper and copper-base alloy mill shapes are subdivided into bare wire for electrical conduction; insulated wire and cable; rod, bar, and mechanical wire; plate, sheet, and strip; and pipe and tube. There is a degree of duplication in the consumption of copper and copper-base mill shapes because of the inclusion in these tables of both bare wire for electrical conduction and insulated wire and cable. However, the consumption of bare wire by insulators of wire and cable is shown separately in the distribution by industry.

The aluminum and aluminum-base alloy mill shapes are subdivided into sheet, plate and foil; extruded shapes; and all other mill shapes.

For castings, consumption data are shown separately for iron, steel, aluminum and aluminum-base alloy, and copper and copper-base alloy. Forgings are shown separately for iron and steel and aluminum and aluminum-base alloy.

PIG IRON, NONFERROUS REFINERY SHAPES, AND SCRAP

Consumption of materials by the primary metal industries is represented in the tables in this chapter by seven commodities: pig iron and iron and steel scrap (except home scrap),

aluminum and aluminum-base alloy refinery shapes and scrap (except home scrap), copper and copper-base alloy refinery shapes and scrap (except home scrap), and zinc and zinc-base alloy refinery shapes. Consumption of these materials is also reported by metal fabricators which operate foundry departments or other activities involving such consumption.

There is a certain degree of duplication in the consumption of the refinery shapes, which stems from the fact that secondary smelters and refiners consume unalloyed metal refinery shapes in order to produce alloy ingots. The consumption of refinery shapes by secondary smelters and refiners is shown separately in the distribution by industry.

INDUSTRY COVERAGE

The tables on consumption by industry include data for approximately 100 metal-fabricating industries. These represent all significant users of metal in manufacturing, and are covered by Major Group 34, Fabricated Metal Products, through Major Group 37, Transportation Equipment, and several additional miscellaneous industries, including Major Group 25, Furniture and Fixtures.

Although there were other metal consuming industries from which consumption data were either not collected or the quantities reported failed publication standards, the omission of these industries affects coverage only slightly.

To relieve very small metal consumers from reporting negligible amounts of total consumption, a minimum usage requirement was established: Expenditures of less than \$5,000 for each shape or form were exempt. It is estimated that the consumption not reported would equal at a maximum, less than 2 percent of total manufacturing consumption.

When comparing consumption data with production figures, it should be noted that the consumption data cover manufacturing industries only. Consumption of these metal shapes in on-site construction, mining, farm uses, construction and maintenance of power lines, and in other nonmanufacturing areas, such as export, is not covered.

MILL SHAPES, CASTINGS, AND FORGINGS PRODUCED AND CONSUMED

Mill shapes and castings.—Total consumption of mill shapes and forms, castings, and forgings in the manufacture of

SECTION I—Continued

fabricated products must necessarily include the tonnages used by metal mills and foundries in their manufacture of fabricated products within the same establishment. These data on mill shapes and castings produced and consumed within the same establishments were collected in quantity terms only. However, the consumption data on these items reported by producing establishments could not be shown either because of disclosure or because reporting was incomplete for some industries.

Forgings.—To avoid duplication, data showing the consumption of iron and steel forgings are excluded from the totals for steel consumption since the quantities of forging stock, ingots, billets, and bars used by the forging plants are included in steel mill shapes and forms consumed.

DEFINITION OF METAL MILL SHAPES AND FORMS

Although the inquiry on metals consumed on the 1972 census schedules did not include a definition of the metal shapes specified, the metal fabricating companies' familiarity with the terms and their meaning provided a high degree of uniformity in reporting. The term "bars and bar shapes" appearing in the tables showing steel consumption, includes hot-rolled and cold-finished bars and tool-steel bars; "sheet

and strip" includes hot- and cold-rolled, galvanized, and long ternes, but excludes tin plate, terne plate, and black plate; "wire and wire products" includes plain, galvanized, and other coated wire, as well as nails and spikes and the like; "all other carbon steel mill shapes and forms" includes ingots, billets, wire rods, concrete reinforcing bars, tin plate, terne plate, black plate, pipe, tubing, and rails, but not forgings or materials fabricated beyond the steel mill level.

The terms copper and copper-base alloy and aluminum rolled, drawn, and extruded shapes are similar to the steel mill products listed above; i.e., sheets, bars, tubing, wire, etc. They do not include wire bars, ingots, or other unrolled forms of copper or aluminum.

The data for bare copper wire are limited to wire for electrical conduction. Data for nonelectrical copper wire are included with rod and bar. The data for copper and copper-base alloy plate, sheet, and strip also include military cups and discs.

The castings (iron and steel, etc.) reported are only those in the rough and semifinished forms in which they are usually received from foundries. Castings, which had undergone extensive machining or other operations prior to their receipt at the consuming establishment, were considered as fabricated products rather than as rough castings, and are not included in these data. However, such castings are reported as consumed by the establishments performing the machining operations.

SECTION I—Continued

CHAPTER 6. **Engines, Motors, Bearings, Electron Tubes, and Semiconductors**

This chapter presents data on gasoline and diesel engines, motors, and generators (timing, synchronous, subsynchronous, fractional, and integral horsepower), ball bearings, roller bearings, electron tubes, and solid state semiconductors consumed. The tables present data for consumption of these components by industry.

The consumption figures for the parts and components shown account for most of the amounts used by establishments classified in manufacturing. The shipments figures for these items, however, also include amounts for exports, for use in nonmanufacturing activities, and for replacement and repair.

SECTION II. Selected Materials Consumed by Kind

PART 1. Selected Materials Consumed in Manufacturing by Kind: 1972 and 1967

GENERAL

The tables in this part present information on consumption of materials by manufacturing establishments in 1972 and 1967. The data are based on reports obtained in a sample survey, MA-131, Consumption of Materials, Parts, Containers, and Supplies During 1972, and serve to supplement the data on materials consumed previously published in the 1972 Census of Manufactures. The data are obtained primarily to facilitate the work of the Bureau of Economic Analysis, Department of Commerce, on national accounts and input-output studies; they also provide, in part, answers to increased demands for more detailed information on consumption of materials by manufacturers.

SUMMARY DATA

As shown in the summary table on page 66, the 141 manufacturing industries selected for this survey accounted for \$139.5 billion of materials consumed or 38.5 percent of the total of \$361.9 billion of materials consumed by all manufacturing establishments in 1972. Of this \$139.5 billion, the category, "all other materials, parts, containers, and supplies consumed" (code 970099), amounted to \$80.7 billion. It was this latter figure which in the table was distributed by class of material on the basis of the data reported in the supplemental survey on Form MA-131. As this table also indicates, the proportion of this cost of "all other materials" to "total cost of materials specified by kind" was reduced from approximately 66 to 7 percent as a result of the data obtained in this supplemental survey.

SAMPLE DESIGN

The 1972 MA-131 Survey was a probability survey based on the cost of materials, parts, containers, and supplies consumed for which insufficient detail was collected in the census. The design of the sample was set to accommodate approximately 6,000 manufacturing establishments. This resulted in the certainty selection of all those plants reporting more than \$4,200 thousand in unspecified materials costs. Other establishments were sampled with probabilities of 1.000 to .005 in accordance with the mathematical theory for optimum allocation of the sample. The response rate on this voluntary survey was approximately 75 percent.

QUALIFICATIONS OF THE DATA

The estimates developed from the sample are apt to differ somewhat from the results of a survey covering all establishments in the sampled list. The sampling errors—the differences between the estimates obtained and the results theoretically obtainable from a comparable complete coverage survey—are unknown. Guides to the potential sizes of the sampling errors, however, are provided by the standard errors of the estimates. These have been computed and are presented in the form of relative standard errors—the standard errors divided by the estimated values to which they refer. In the MA-131 Survey, the standard errors are calculated for response data only and thus may be overstated or understated because of nonresponse. A relative standard error can be interpreted to mean that its associated estimate is reliable within plus or minus the relative standard error percentage of the estimate for about two-thirds of all possible samples. If the relative standard error is doubled and applied, the range of the estimate is good for about 95 percent of all possible samples; if tripled the resulting estimate range is good for nearly all samples.

When the relative standard error is large, its associated estimate may be combined with other estimates to increase its reliability. The approximate relative standard error of estimate for combined estimates can be derived by multiplying each component estimate by its relative standard error, squaring the result, summing the squares, taking the square root of that sum, and dividing the result by the aggregated estimate.

In addition to sampling errors, the estimates are subject to response and operational errors. However, these errors would also occur in a complete canvass survey, and have been minimized in the MA-131 Survey by a thorough review of the data for reasonableness and consistency.

COMPARABILITY OF DATA

Comparability of the 1967 and 1972 data presented in this report is approximate due to a difference in sample designs and to the major revisions of the Standard Industrial Classification system for 1972. The 1967 MA-131 Survey was a probability survey based on the employment size of establishments, the 1972 survey was based on cost of materials (see the earlier discussion of 1972 sample design). The sampling errors shown for the 1972 estimates can be expected to indicate roughly the magnitude of the errors for the 1967 estimates. The average level of the 1972 errors should be somewhat smaller because the sample was increased in size and was more efficiently designed for the 1972 survey. This general relationship may not hold for specific materials costs estimates because of the difference in the two sample designs.

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies; costs are included in costs for code 970099, "All other materials, etc.". (Z) Less than half of the unit of measurement shown.

¹Represents cost of materials for establishments which did not report any detailed materials in the census. It also includes estimates for establishments which were not mailed report forms.

SECTION II, PART 1—Continued

CHAPTER 1. Major Group 28—Chemicals and Allied Products

This major group includes establishments producing basic chemicals, and establishments manufacturing products by predominantly chemical processes. Establishments classified in this major group manufacture three general classes of products: (1) Basic chemicals such as acids, alkalies, salts, and organic chemicals; (2) chemical products to be used in further manufacture such as synthetic fibers, plastics materials, dry colors, and pigments; and (3) finished chemical products to be

used for ultimate consumption, such as drugs, cosmetics, and soaps, or to be used as materials or supplies in other industries, such as paints, fertilizers, and explosives.

The following industries in this major group are those for which information was obtained in the **1972 Census of Manufactures Supplemental Inquiry; Consumption of Materials, Parts, Containers, and Supplies During 1972**, on Form MA-131. They are included in this report.

SIC Codes and Titles

2812—Alkalies and Chlorine
2819—Industrial Inorganic Chemicals, N.E.C.
2821—Plastics Materials and Resins
2823—Cellulosic Manmade Fibers
2824—Organic Fibers, Noncellulosic
2833—Medicinals and Botanicals
2834—Pharmaceutical Preparations
2841—Soap and Other Detergents
2842—Polishes and Sanitation Goods

2843—Surface Active Agents
2844—Toilet Preparations
2851—Paints and Allied Products
2865—Cyclic Crudes and Intermediates
2869—Industrial Organic Chemicals, N.E.C.
2879—Agricultural Chemicals, N.E.C.
2891—Adhesives and Sealants
2893—Printing Ink
2899—Chemical Preparations, N.E.C.

Materials Consumed by Kind for Selected Industries in Major Group 28: 1972 and 1967

(Data shown parenthetically are ranges expressed in millions of dollars)

Materials Consumed by Kind for Selected Industries in Major Group 28: 1972 and 1967—Continued

(Footnotes for Major Group 28)

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.
(Z) Less than half of the unit of measurement shown.

¹Estimates having associated relative standard errors exceeding 15 percent are of limited reliability. However, they may be combined into broader aggregates which are of acceptable reliability. See Explanatory Text for methodology. The 1972 standard errors may be used as approximations of the relative errors for the 1967 estimates. This general relationship may not hold for specific materials costs estimates due to the difference in the 2 sample designs.

²See table 7A of the 1972 Census of Manufactures final Industry series (MC72(2)) for quantity and cost data of the individual materials collected in the census of manufactures.

³Represents the total cost of materials for establishments that did not report detail materials data, and includes estimates for companies whose data were estimated based on administrative records. (See section titled "The Census Report Forms" in Introduction for discussion of administrative records.)

⁴Represents data requested at a finer level of detail in the MA-131 Survey, but which have been aggregated to avoid disclosing figures for individual companies. This aggregated total excludes any data published at a finer level in either the census or the MA-131 Survey.

⁵Not separately listed on the MA-131 Survey report form. The cost estimate represents only the data reported by establishments consuming \$25,000 or more of this material as instructed on the report form.

⁶Comparable data for 1967 are not available due to the 1972 SIC revision.

⁷Detail cost of materials as reported in the census of manufactures is understated by the amount shown in "Other materials previously requested on the census report form."

⁸No materials detail was collected in the census.

⁹Not included in the MA-131 Survey in 1967.

SECTION II, PART 1—Continued

CHAPTER 2. **Major Group 30—Rubber and Miscellaneous Plastics Products**

This major group includes establishments manufacturing from natural, synthetic, or reclaimed rubber, gutta percha, balata, or gutta siak, rubber products such as tires, rubber footwear, mechanical rubber goods, heels and soles, flooring, and rubber sundries. Establishments primarily manufacturing tires are included, but automobile tire repair shops engaged in recapping and retreading automobile tires are classified in services. Also included are establishments engaged in molding primary plastics for the trade and manufacturing miscellaneous

finished plastics products. The manufacture of elastic webbing is classified in Major Group 22, products made of elastic webbing and garments made from rubberized fabrics in Major Group 23, and synthetic rubber in industry 2822.

The following industries in this major group are those for which information was obtained in the **1972 Census of Manufactures Supplemental Inquiry; Consumption of Materials, Parts, Containers and Supplies During 1972**, on Form MA-131. They are included in this report.

SIC Codes and Titles

⁸Represents data requested at a finer level of detail in the MA-131 Survey, but which have been aggregated to avoid disclosing figures for individual companies. This aggregated total excludes any data published at a finer level in either the census or the MA-131 Survey.

SECTION II, PART 1—Continued

CHAPTER 3. **Major Group 32—Stone, Clay, and Glass Products**

This major group includes establishments engaged in manufacturing flat glass and other glass products, cement, structural clay products, pottery, concrete, and gypsum products, cut-stone products, abrasive and asbestos products, etc., from materials taken principally from the earth in the form of stone, clay, and sand. When separate reports are available for mines and quarries operated by manufacturing establishments classified in this major group, the mining activities are

classified in mining industries. When separate reports are not available, the mining activities are classified herein with the manufacturing operations.

The following industries in this major group are those for which information was obtained in the **1972 Census of Manufactures Supplemental Inquiry; Consumption of Materials, Parts, Containers and Supplies During 1972**, on Form MA-131. They are included in this report.

SIC Codes and Titles

3221—Glass Containers
3229—Pressed and Blown Glass, N.E.C.
3241—Cement, Hydraulic
3291—Abrasive Products

3292—Asbestos Products
3295—Minerals, Ground or Treated
3296—Mineral Wool
3297—Nonclay Refractories

(X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown.

¹Estimates having associated relative standard errors exceeding 15 percent are of limited reliability. However, they may be combined into broader aggregates which are of acceptable reliability. See Explanatory Text for methodology. The 1972 standard errors may be used as approximations of the relative errors for the 1967 estimates. This general relationship may not hold for specific materials costs estimates due to the difference in the 2 sample designs.

²Not included in the MA-131 Survey in 1967.

³See table 7A of the 1972 Census of Manufactures final Industry series MC72(2) for quantity and cost data of the individual materials collected in the census of manufactures.

⁴The detail cost of materials as reported in the census of manufactures is understated by the amount shown in "Other materials previously requested on the census report form."

⁵Represents the total cost of materials for establishments that did not report detail materials data, and includes estimates for companies whose data were estimated based on administrative records. (See section titled "The Census Report Forms" in Introduction for discussion of administrative records.)

⁶Not separately listed on the MA-131 Survey report form. The cost estimate represents only the data reported by establishments consuming \$25,000 or more of this material as instructed on the report form.

⁷No materials detail was collected in the census.

⁸Represents data requested at a finer level of detail in the MA-131 Survey, but which have been aggregated to avoid disclosing figures for individual companies. This aggregated total excludes any data published at a finer level in either the census or the MA-131 Survey.

SECTION II, PART 1—Continued

CHAPTER 4. Major Group 34—Fabricated Metal Products

This major group includes establishments primarily engaged in manufacturing a wide variety of fabricated metal products. Other important segments of the metal fabricating industries are classified in other major groups, such as machinery in Major Groups 35 and 36, transportation equipment in Major Group 37, instruments and related products in Major Group 38, and jewelry and silverware in Major Group 39.

The industries included in this major group encompass a varied group of fabricated metal-finished products (cutlery, hardware, oil burners, plumbing fixtures, metal doors, safes, arms, ammunition, etc.), materials or components for incorporation into other products (sheet metal work, steel springs, bolts and nuts, etc.), containers (metal cans, metal shipping barrels and drums, and collapsible tubes), and service opera-

tions performed on a job or order basis for the trade (galvanizing, coating, engraving, etc.).

Industries 3482, 3483, 3484, and 3489 are included in this chapter; they were formerly in Major Group 19, Ordnance and Accessories.

The products of Major Group 34 are used by establishments in other manufacturing industries as well as in construction, mines, farms, transportation, commerce, and households. The basic metals consumed are generally produced by establishments in Major Group 33, Primary Metal Industries.

The following industries in the major group are those for which information was obtained in the **1972 Census of Manufactures Supplemental Inquiry; Consumption of Materials, Parts, Containers and Supplies During 1972**, on Form MA-131. They are included in this report.

SIC Codes and Titles

3429—Hardware, N.E.C.

3433—Heating Equipment, Except Electric

3443—Fabricated Platework (Boiler Shops)

3444—Sheet Metalwork

3465—Automotive Stampings

3466—Crowns and Closures

3469—Metal Stampings, N.E.C.

3471—Plating and Polishing

3482—Small Arms Ammunition

3483—Ammunition, Except for Small Arms, N.E.C.

3484—Small Arms

3489—Ordnance and Accessories, N.E.C.

3494—Valves and Pipe Fittings

3499—Fabricated Metal Products, N.E.C.

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.
(Z) Less than half of the unit of measurement shown.

¹Estimates having associated relative standard errors exceeding 15 percent are of limited reliability. However, they may be combined into broader aggregates which are of acceptable reliability. See Explanatory Text for methodology. The 1972 standard errors may be used as approximations of the relative errors for the 1967 estimates. This general relationship may not hold for specific materials costs estimates due to the difference in the 2 sample designs.

²See table 7A of the 1972 Census of Manufactures final Industry series MC72(2) for quantity and cost data of the individual materials collected in the census of manufactures.

³The detail cost of materials as reported in the census of manufactures is understated by the amount shown in "Other materials previously requested on the census report form."

⁴Represents the total cost of materials for establishments that did not report detail materials data, and includes estimates for companies whose data were estimated based on administrative records. (See section titled "The Census Report Forms" in Introduction for discussion of administrative records.)

⁵Represents data requested at a finer level of detail in the MA-131 Survey, but which have been aggregated to avoid disclosing figures for individual companies. This aggregated total excludes any data published at a finer level in either the census or the MA-131 Survey.

⁶Collected in item 17 of the Census Report Form for 1972.

⁷Not separately listed on the MA-131 Survey report form. The cost estimate represents only the data reported by establishments consuming \$25,000 or more of this material as instructed on the report form.

⁸Comparable data for 1967 are not available due to the 1972 SIC revision.

⁹Not included in the MA-131 Survey in 1967.

¹⁰No materials detail was collected in the census.

SECTION II, PART 1—Continued

CHAPTER 5. Major Group 35—Machinery, Except Electrical

This major group includes establishments primarily engaged in producing a wide variety of machinery and equipment items. The industries included encompass the whole range of industrial machinery, other than electrical. To a considerable extent, the products fall into the producers' heavy equipment category, are frequently of a complex character, and are produced both to individual order and as standard items. Industries in industry groups 351 to 358 are defined in terms of end products, and the parts, attachments, and accessories for these items are included in the industry of this end product unless specifically classified elsewhere in the Standard Industrial Classification (SIC). Industry group 359, Miscellaneous Machinery, Except Electrical, includes plants producing a broad variety of miscellaneous parts made by job machine shops.

Industry group 352 includes farm machines and wheel-tractors, while industry group 353 comprises all types of earth-moving equipment, including tracklaying tractors and contractors' off-highway type tractors, mining machinery, and materials-handling equipment. The end products of plants in industry groups 351 to 356 are usually capital equipment, bought and used, not only by manufacturing companies but also at mines, farms, and in transportation, construction, and commerce. Industry groups 357 and 358 include products for commercial and service use such as measuring and dispensing pumps, office and store machines, and commercial refrigeration equipment.

Plants primarily engaged in rebuilding machinery or equipment on a factory basis are classified according to the original industry classification of the product being rebuilt. Plants primarily rebuilding automotive parts are included in Major Group 37. Plants primarily rebuilding machine tools, metalworking machinery, and office and store machines are included in the industry of the plants producing the original equipment. The data in this report represent materials used for producing new equipment as well as for rebuilding used machinery.

The individual establishments within Major Group 35 frequently produce products falling into two or more SIC 4-digit industries. In fact, many of the larger establishments produce a significant amount of products secondary to the industry in which they are classified. These secondary products, however, tend to be similar to the primary products of the establishment in the material used in their manufacture, type of labor employed to produce them, and nature of the processes involved in the production line.

Establishments in this group of industries typically maintain machine shops, tool and die rooms, and heat-treating facilities. Frequently the establishment, particularly if it is of some size, will also operate a pattern shop, screw-machine department, and stamping facility. With greater variation depending upon the particular SIC 4-digit industry, the physical plant may contain a foundry, forge shop, plate fabrication, electroplating, galvanizing, or other metal processing department.

Although the production processes in this area adhere to a general pattern of specified metalworking and metal fabricating operations, there is a substantial variation in the number and types of processes performed by an individual establishment as well as from industry to industry. Within a single SIC 4-digit industry, certain establishments may be exclusively engaged in assembling component parts produced by other plants. Another group of plants may purchase rough castings or mill shapes and carry out the entire fabricating of the metal until it emerges as finished product. In other instances, the casting of the metal will be performed by the establishment itself.

The following industries in this major group are those for which information was obtained in the **1972 Census of Manufactures Supplemental Inquiry; Consumption of Materials, Parts, Containers and Supplies During 1972**, on Form MA-131. They are included in this report.

SECTION II, PART 1—Continued

SIC Codes and Titles

3511—Turbines and Turbine Generator Sets	3555—Printing Trades Machinery
3519—Internal Combustion Engines, N.E.C.	3559—Special Industry Machinery, N.E.C.

99999	All other materials, parts, components, containers, and supplies not listed above.....	47	45	92	200	(X)	(X)

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.
(Z) Less than half of the unit of measurement shown.

¹Estimates having associated relative standard errors exceeding 15 percent are of limited reliability. However, they may be combined into broader aggregates which are of acceptable reliability. See Explanatory Text for methodology. The 1972 standard errors may be used as approximations of the relative errors for the 1967 estimates. This general relationship may not hold for specific materials costs estimates due to the difference in the 2 sample designs.

²See table 7A of the 1972 Census of Manufactures final Industry series MC72(2) for quantity and cost data of the individual materials collected in the census of manufactures.

³The detail cost of materials as reported in the census of manufactures is understated by the amount shown in "Other materials previously requested on the census report form."

⁴Represents the total cost of materials for establishments that did not report detail materials data, and includes estimates for companies whose data were estimated based on administrative records. (See section titled "The Census Report Forms" in Introduction for discussion of administrative records.)

⁵Not separately listed on the MA-131 Survey report form. The cost estimate represents only the data reported by establishments consuming \$25,000 or more of this material as instructed on the report form.

⁶Represents data requested at a finer level of detail in the MA-131 Survey, but which have been aggregated to avoid disclosing figures for individual companies. This aggregated total excludes any data published at a finer level in either the census or the MA-131 Survey.

⁷Was collected in item 17 of the Census Report Form for 1972.

⁸Includes \$96 million listed as items such as axles, radiators, brakes, etc.

⁹Industry 3573 includes extensive duplication because the products of some establishments are consumed as materials by other establishments in the same industry.

¹⁰Industries 3579 and 3572 are combined in the 1972 Census of Manufactures to avoid disclosing figures of individual companies.

¹¹Materials data do not include that portion applicable to product class 35858 (warm air furnaces). This was classified in product class 34332 in the 1967 census.

SECTION II, PART 1—Continued

CHAPTER 6. Major Group 36—Electrical and Electronic Machinery, Equipment, and Supplies

This major group includes establishments primarily engaged in manufacturing machinery, apparatus, and supplies for the generation, storage, transmission, transformation, and utilization of electrical energy.

A number of products which are sometimes considered as belonging in electrical equipment are classified in other major groups in the Standard Industrial Classification (SIC) Manual. For example, machinery or equipment powered by built-in or detachable electric motors, such as machine tools and other metal-working equipment, commercial laundry and dry cleaning equipment, industrial vacuum cleaners, and office and store machines are classified in Major Group 35. Establishments primarily engaged in producing glass insulators, glass blanks for bulbs, and porcelain electrical supplies in Major Group 32; those producing electric furnaces and ovens, turbo-generators and gas-welding apparatus in Major Group 35; and those making automatic temperature controls in Major Group 38.

Establishments primarily engaged in manufacturing instruments for indicating measuring, and recording electrical quantities and characteristics were formerly classified in industry 3611. In the revised SIC, these are classified in industry 3825.

Industries included in Major Group 36 are typically defined

in terms of products and may include both electrical and electronic equipment. Industry groups 365, 366, and 367 include the bulk of electronic equipment in this major group, i.e., radios, television sets, electron tubes, etc., but they also encompass some communications equipment other than electronic. Most of the other industries in Major Group 36 include products generally defined as electrical rather than electronic. Electronic components are frequently produced and consumed at the same location by establishments classified in this major group. Thus, there are (1) plants solely engaged in producing electronic components, (2) plants producing electronic components and assembling them into finished products, and (3) plants which assemble components produced elsewhere either in other plants of the same company or by other companies. Other types of components and equipment in Major Group 36 such as motors, generators, and motor-generator sets are not uncommonly produced for incorporation into other products made in the same plant.

The following industries in this major group are those for which information was obtained in the **1972 Census of Manufactures Supplemental Inquiry; Consumption of Materials, Parts, Containers, and Supplies During 1972**, on Form MA-131. They are included in this report.

SIC Codes and Titles

3612—Transformers
3613—Switchgear and Switchboard Apparatus
3621—Motors and Generators
3622—Industrial Controls
3624—Carbon and Graphite Products
3629—Electrical Industrial Apparatus, N.E.C.
3631—Household Cooking Equipment
3632—Household Refrigerators and Freezers
3633—Household Laundry Equipment
3634—Electric Housewares and Fans
3639—Household Appliances, N.E.C.
3641—Electric Lamps
3643—Current-Carrying Wiring Devices
3644—Noncurrent-Carrying Wiring Devices
3645—Residential Lighting Fixtures

3646—Commercial Lighting Fixtures
3647—Vehicular Lighting Equipment
3648—Lighting Equipment, N.E.C.
3651—Radio and TV Receiving Sets
3661—Telephone and Telegraph Apparatus
3662—Radio and TV Communication Equipment
3674—Semiconductors and Related Devices
3675—Electronic Capacitors
3676—Electronic Resistors
3677—Electronic Coils and Transformers
3678—Electronic Connectors
3679—Electronic Components, N.E.C.
3691—Storage Batteries
3694—Engine Electrical Equipment
3699—Electrical Equipment and Supplies, N.E.C.

Materials Consumed by Kind for Selected Industries in Major Group 36: 1972 and 1967

(Data shown parenthetically are ranges expressed in millions of dollars)

1972 code	Industry and material	Delivered cost (million dollars)		Relative standard error ¹ for column a

		(million dollars)		
		1972	1967	
		(a)	(b)	
INDUSTRY 3632.--HOUSEHOLD REFRIGERATORS AND FREEZERS--Continued				
Estimates based on the MA-131 Survey--Continued:				
28510	Paints, varnishes, lacquers, and enamels.....	33	15	1
28692	Refrigerant gases and other synthetic organic chemicals.....	13	5	1
28990	Foundry chemicals, frit, metal treating compounds, and plating compounds.....	6	8	1
30690	Fabricated rubber products, including door seals, except gaskets.....	19	22	1
30790	Fabricated plastics products, except gaskets.....	113	69	1
32310	Glass products ⁵	2	(NA)	1
32930	Gaskets, all types ⁵	7	(NA)	1
32960	Mineral wool insulation, including glass fiber insulation.....	18	22	1
33576	Flexible cord sets, complete.....	6	14	1
34290	Metal hardware, including hinges, handles, locks, casters, etc.....	24	33	10
34500	Bolts, nuts, screws, rivets, washers, and screw machine products.....	19	22	1
34601	Metal stampings, including vitreous enameled.....	11	21	1
34901	Wire shelves and other fabricated nonelectric wire products.....	31	29	1
34902	Fabricated metal pipe, valves, and pipe fittings, except plumbers.....	(5-10)	11	(X)
35640	Fans and blowers.....	5	(NA)	1
35850	Compressors, compressor units, condensing units, fin coils, and other heat transfer equipment ⁷	(X)	140	(X)
36010	Relays, regulators, and other electrical control apparatus.....	24	40	1
36430	Appliance outlets, switches, lampholders, and other current-carrying wiring devices.....	23	21	1
38220	Automatic temperature controls, thermostats, regulators, etc.....	28	29	1
93632	Other materials previously requested on the census report form ³	20	(NA)	(X)
99999	All other materials, parts, components, containers, and supplies not reported above.....	37	128	(X)
INDUSTRY 3633.--HOUSEHOLD LAUNDRY EQUIPMENT				
Materials, parts, containers, and supplies, total.....				
	Data requested in census of manufactures: ²	665	539	(X)
	Specified by kind ³	336	201	(X)
	Not specified by kind (census code 976000) ⁴	2	44	(X)
	Data obtained in MA-131 Survey (census code 970099).....	327	294	(X)
Estimates based on the MA-131 Survey:				
24402	Wooden containers, complete; including combination wood and paperboard.....	(5-10)	3	(X)
28510	Paints, varnishes, lacquers, and enamels.....	14	10	1
30690	Rubber hose, V-belts, rolls, and other fabricated rubber products, except gaskets.....	31	22	1
30790	Plastic agitators and other fabricated plastics products, except gaskets.....	31	16	1
33690	Zinc and zinc-base alloy castings, rough and semifinished.....	20	26	1
34500	Bolts, nuts, screws, rivets, and screw machine products.....	21	13	1
34610	Metal stampings ⁷	(X)	27	(X)
34615	Vitreous (porcelain) enameled tubes and other enameled parts ⁷	(X)	18	(X)
34901	Wire springs and other fabricated nonelectric wire products.....	6	4	1
34902	Fabricated metal pipe, valves, and pipe fittings, except plumbers.....	11	13	1
35602	Gears, speed reducers, plain bearings and bushings, and other mechanical power transmission equipment, except ball and roller bearings.....	10	11	1
35620	Ball and roller bearings.....	5	(NA)	1
35850	Refrigeration compressor units, condensing units, fin coils, and other refrigeration equipment ⁵	(10-20)	(NA)	(X)
36310	Cooking burners ⁵	(5-10)	(NA)	(X)
36333	Wringers (complete and other parts and attachments for laundry equipment.....	(2-5)	5	(X)
36430	Current-carrying wiring devices ⁵	(under 2)	(NA)	(X)
38220	Automatic temperature controls (thermostats, regulators, etc.).....	41	11	1
38710	Timing mechanisms ⁷	(X)	29	(X)
39930	Nameplates ⁵	(5-10)	(NA)	(X)
93633	Other materials previously requested on the census report form ³	18	(NA)	(X)
99999	All other materials, parts, components, containers, and supplies not reported above.....	86	86	(X)
INDUSTRY 3634.--ELECTRIC HOUSEWARES AND FANS				
Materials, parts, containers, and supplies, total.....				
	Data requested in census of manufactures: ²	649	449	(X)
	Specified by kind ³	225	124	(X)
	Not specified by kind (census code 976000) ⁴	50	53	(X)
	Data obtained in MA-131 Survey (census code 970099).....	374	272	(X)
Estimates based on the MA-131 Survey:				
22010	Fabrics made of cotton, wool, silk, and synthetic fibers.....	17	14	1
27000	Printed material ⁵	(under 2)	(NA)	(X)
28210	Plastics and synthetic resin materials, including molding and extrusion.....	34	22	1
28510	Paints, varnishes, lacquers, enamels, and shellacs.....	6	4	17
28990	Foundry chemicals, frit, metal treating compounds, and plating compounds.....	4	7	1
30690	Fabricated rubber products, except gaskets.....	3	2	17
30790	Fabricated plastics products, except gaskets.....	47	27	1
31721	Dry shaver cases, leather.....	-	4	(X)
32010	Glass and glass products.....	11	(NA)	1
32930	Gaskets and asbestos packing.....	1	4	1
32960	Mineral wool insulation, including glass fiber insulation.....	(2)		33
33560	Nonferrous metal mill shapes and forms, except copper and aluminum.....	14	(NA)	10

See footnotes at end of table.

Materials Consumed by Kind for Selected Industries in Major Group 36: 1972 and 1967—Continued

(Footnotes for chapter 6)

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.
(Z) Less than half of the unit of measurement shown.

¹Estimates having associated relative standard errors exceeding 15 percent are of limited reliability. However, they may be combined into broader aggregates which are of acceptable reliability. See Explanatory Text for methodology. The 1972 standard errors may be used as approximations of the relative errors for the 1967 estimates. This general relationship may not hold for specific materials costs estimates due to the difference in the 2 sample designs.

²See table 7A of the 1972 Census of Manufactures final Industry series (MC72(2)) for quantity and cost data of the individual materials collected in the census of manufactures.

³The detail cost of materials as reported in the census of manufactures is understated by the amount shown in "Other materials previously requested on the census report form."

⁴Represents the total cost of materials for establishments that did not report detail materials data, and includes estimates for companies whose data were estimated based on administrative records. (See section titled "The Census Report Forms" in Introduction for discussion of administrative records.)

⁵This material was not separately listed on the MA-131 Survey report form. The cost estimate represents only the data reported by establishments consuming \$25,000 or more of this material as instructed on the report form.

⁶Represents data requested at a finer level of detail in the MA-131 Survey, but which have been aggregated to avoid disclosing figures for individual companies. This aggregated total excludes any data published at a finer level in either the census or the MA-131 Survey.

⁷Collected in item 17 of the Census Report Form for 1972.

⁸Included with code 99999.

SECTION II, PART 1—Continued

CHAPTER 7. Major Group 37—Transportation Equipment

This major group includes establishments primarily engaged in manufacturing equipment for transportation of passengers and cargo by land, air, and water. Important products produced by establishments classified in this major group include motor vehicles, aircraft, guided missiles, space vehicles, ships, boats, railroad equipment, and miscellaneous transportation equipment such as motorcycles, bicycles, etc.

Industries 3761 and 3795, included in the chapter were formerly in Major Group 19, Ordnance and Accessories.

Certain products which are sometimes associated with or considered a part of transportation equipment are classified in

other major groups in the Standard Industrial Classification System. For example, wheeltypes tractors, tracklaying tractors, mining cars, and industrial trucks, tractors, trailers, and stackers are classified in Major Group 35; ignition systems and storage batteries in Major Group 36; and automotive stampings in Major Group 34.

The following industries in this major group are those for which information was obtained in the **1972 Census of Manufactures Supplemental Inquiry; Consumption of Materials, Parts, Containers, and Supplies During 1972**, on Form MA-131. They are included in this report.

SIC Codes and Titles

3711—Motor Vehicles and Car Bodies
3713—Truck and Bus Bodies
3714—Motor Vehicle Parts and Accessories
3715—Truck Trailers
3721—Aircraft
3724—Aircraft Engines and Engine Parts
3728—Aircraft Equipment, N.E.C.

- Represents zero. (X) Not applicable. (NA) Not available. (Z) Less than half the unit of measurement shown.

¹Estimates having associated relative standard errors exceeding 15 percent are of limited reliability. However, they may be combined into broader aggregates which are of acceptable reliability. See Explanatory Text for methodology. The 1972 standard errors may be used as approximations of the relative errors for the 1967 estimates. This general relationship may not hold for specific materials costs estimates due to the difference in the 2 sample designs.

²See table 7A of the 1972 Census of Manufactures final Industry series (MC72(2)) for quantity and cost data of the individual materials collected in the census of manufactures.

³The detail cost of materials as reported in the census of manufactures is understated by the amount shown in "Other materials previously requested" on the census report form."

⁴Represents the total cost of materials for establishments that did not report detail materials data, includes estimates for companies whose data were estimated based on administrative records. (See section titled "The Census Report Forms" in Introduction for discussion of administrative records.)

⁵Not separately listed on the MA-131 Survey report form. The cost estimate represents only the data reported by establishments consuming \$25,000 or more of this material as instructed on the report form.

⁶Collected in item 17 of the Census Report Form for 1972.

⁷Includes over \$400 million of tires which should have been reported in the census materials inquiry.

⁸Represents data requested at a finer level of detail in the MA-131 Survey, but which have been aggregated to avoid disclosing figures for individual companies. This aggregated total excludes any data published at a finer level in either the census or the MA-131 Survey.

⁹Combines codes 37141 and 37149.

¹⁰Combines codes 37244 and 37648.

¹¹Combines codes 37281, 37285, and 37692.

¹²Combines codes 37281 and 37692.

¹³Comparable data are not available due to the 1972 revision.

SECTION II, PART 1—Continued

CHAPTER 8. Major Group 38—Instruments and Related Products

This major group includes establishments engaged in manufacturing instruments for measuring, testing, analyzing, and controlling and their associated sensors and accessories; optical instruments and lenses; surveying and drafting instruments; surgical, medical, and dental instruments, equipment and supplies; ophthalmic goods; photographic equipment and

supplies; and watches and clocks.

The following industries in this major group are those for which information was obtained in the **1972 Census of Manufactures Supplemental Inquiry; Consumption of Materials, Parts, Containers, and Supplies During 1972**, on Form MA-131. They are included in this report.

SIC Codes and Titles

3811—Engineering and Scientific Instruments
3822—Environmental Controls
3823—Process Control Instruments
3824—Fluid Meters and Counting Devices
3825—Instruments to Measure Electricity
3829—Measuring and Controlling Devices, N.E.C.

3832—Optical Instruments and Lenses
3842—Surgical Appliances and Supplies
3851—Ophthalmic Goods
3861—Photographic Equipment and Supplies
3873—Watches, Clocks, and Watchcases

39610	Metal watch bands, except precious metal.....	7	4	17	
93873	Other materials previously requested on the census report form ⁶	8	(NA)	(X)	
99999	All other materials, parts, components, containers, and supplies not reported above.....	26	53	(X)	

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

Z) Less than half of the unit of measurement shown.

¹Estimates having associated relative standard errors exceeding 15 percent are of limited reliability. However, they may be combined into broader aggregates which are of acceptable reliability. See Explanatory Text for methodology. The 1972 standard errors may be used as approximations of the relative errors for the 1967 estimates. This general relationship may not hold for specific materials costs estimates due to the difference in the 2 sample designs.

²See table 7A of the 1972 Census of Manufactures final Industry series (MC72(2)) for quantity and cost data of the individual materials collected in the census of manufactures.

³Represents the total cost of materials for establishments that did not report detail materials data and includes estimates for companies whose data were estimated based on administrative records. (See section titled "The Census Report Forms" in Introduction for discussion of administrative records.)

⁴Represents data requested at a finer level of detail in the MA-131 Survey, but which have been aggregated to avoid disclosing figures for individual companies. This aggregated total excludes any data published at a finer level in either the census or the MA-131 Survey.

⁵Not separately listed on the MA-131 Survey report form. The cost estimate represents only the data reported by establishments consuming \$25,000 or more of this material as instructed on the report form.

⁶The detail cost of materials as reported in the census of manufactures is understated by the amount shown in "Other materials previously requested on the census report form."

⁷Not included in the MA-131 Survey in 1967.

⁸No materials detail was collected in the census.

⁹Excludes watchcases.

SECTION II, PART 1—Continued

CHAPTER 9. Major Group 39—Miscellaneous Manufacturing Industries

Major Group 39 includes establishments primarily engaged in manufacturing products not classified in any other major manufacturing group. Industries in this group fall into the following categories: Jewelry and silverware and plated ware; musical instruments; toys and sporting and athletic goods; pens, pencils, and other office and artists' materials; buttons, costume novelties, and miscellaneous notions; brooms and

brushes; morticians' goods; and other miscellaneous manufacturing industries.

The following industries in this major group are those for which information was obtained in the **1972 Census of Manufactures Supplemental Inquiry; Consumption of Materials, Parts, Containers, and Supplies During 1972**, on Form MA-131. They are included in this report.

SIC Codes and Titles

3911—Jewelry, Precious Metal
3931—Musical Instruments
3944—Games, Toys, and Children's Vehicles
3949—Sporting and Athletic Goods, N.E.C.
3961—Costume Jewelry

3964—Needles, Pins, and Fasteners
3991—Brooms and Brushes
3993—Signs and Advertising Displays
3995—Burial Caskets

Materials Consumed by Kind for Selected Industries in Major Group 39: 1972 and 1967

(Data shown parenthetically are ranges expressed in millions of dollars)

1972 code	Industry and material	Delivered cost (million dollars)		Relative standard error ¹ for column a

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.
(Z) Less than half the unit of measurement shown.

¹Estimates having associated relative standard errors exceeding 15 percent are of limited reliability. However, they may be combined into broader aggregates which are of acceptable reliability. See Explanatory Text for methodology. The 1972 standard errors may be used as approximations of the relative errors for the 1967 estimates. This general relationship may not hold for specific materials costs estimates due to the difference in the 2 sample designs.

²See table 7A of the 1972 Census of Manufactures final Industry series MC72(2) for quantity and cost data of the individual materials collected in the census of manufactures.

³No materials detail was collected in the census.

⁴Represents the total cost of materials for establishments that did not report detail materials data, and includes estimates for companies whose data were estimated based on administrative records. (See section titled "The Census Report Forms" in Introduction for discussion of administrative records.)

⁵Not separately listed on the MA-131 Survey report form. The cost estimate represents only the data reported by establishments consuming \$25,000 or more of this material as instructed on the report form.

⁶Represents data requested at a finer level of detail in the MA-131 Survey, but which have been aggregated to avoid disclosing figures for individual companies. This aggregated total excludes any data published at a finer level in either the census or the MA-131 Survey.

⁷Includes costs for games and toys only.

⁸The detail cost of materials as reported in the census of manufactures is understated by the amount shown in "Other materials previously requested on the census report form."

⁹Not included in the MA-131 Survey in 1967.

SECTION II—Continued

PART 2. Supplies Consumed in Mineral Industries by Kind: 1972 and 1967

GENERAL

The tables in this part present information on consumption of supplies by mineral establishments in 1972 and 1967. The data are based on reports obtained in a sample survey, using Form MA-131, on consumption of materials, parts, containers, and supplies during 1972 and serve to supplement the data on supplies consumed, previously published in the 1972 Census of Mineral Industries. The data are obtained primarily to facilitate the work of the Bureau of Economic Analysis, Department of Commerce, on national accounts and input-output studies; they also provide, in part, answers to increased demands for more detailed information on consumption of supplies by mining establishments.

SUMMARY DATA

As shown in the summary table on page 00, the mineral industries selected for this survey accounted for \$3,242 million of supplies consumed by all mineral establishments in 1972. Of this, the category, "all other supplies" (code 970099), amounted to \$2,284 million. It was this latter figure which in the table was distributed by class of material on the basis of the data reported in the supplemental survey on Form MA-131. As the table also indicates, the proportion of the cost of "all other supplies" to "total cost of supplies, specified by kind" was reduced from approximately 71 to 10 percent as a result of the data obtained in this supplemental survey.

SAMPLE DESIGN

The 1972 MA-131 Survey was a probability survey based on the cost of supplies consumed for which insufficient detail was collected in the census. The design of the sample was set to accommodate approximately 900 mineral establishments. This resulted in the certainty selection of all those plants reporting more than \$1,300 thousand in unspecified supplies costs. Other establishments were sampled with probabilities of 1.000 to .005 in accordance with mathematical theory for optimum allocation of the sample. The response rate on the mineral industry portion of this voluntary survey was approximately 85 percent.

QUALIFICATIONS OF THE DATA

The estimates developed from the sample are apt to differ somewhat from the results of a survey covering all establish-

ments in the sampled list. The sampling errors—the differences between the estimates obtained and the results theoretically obtainable from a comparable complete coverage survey—are unknown. Guides to the potential sizes of the sampling errors, however, are provided by the standard errors of the estimates. These have been computed and are presented in the form of relative standard errors, the standard errors divided by the estimated values to which they refer. In the MA-131 Survey, the standard errors are calculated for response data only and thus may be overstated or understated because of nonresponse. A relative standard error can be interpreted to mean that its associated estimate is reliable within (plus or minus) the relative standard error percentage of the estimate for about two-thirds of all possible samples. If the relative standard error is doubled and applied, the range of the estimate is good for about 95 percent of all possible samples; if tripled the resulting estimate range is good for nearly all samples.

When the relative standard error is large, its associated estimate may be combined with other estimates to increase its reliability. The approximate relative standard error of estimate for combined estimates can be derived by multiplying each component estimate by its relative standard error, squaring the result, summing the squares, taking the square root of that sum, and dividing the result by the aggregated estimate.

In addition to sampling errors the estimates are subject to response and operational errors. However, these errors would also occur in a complete canvass survey, and have been minimized in the MA-131 Survey by a thorough review of the data for reasonableness and consistency.

COMPARABILITY OF DATA

Comparability of the 1967 and 1972 data presented in this report is approximate due to a difference in sample designs and to the major revisions of the Standard Industrial Classification (SIC) system for 1972. The 1967 MA-131 Survey was a probability survey based on the employment size of establishments; the 1972 survey was based on cost of supplies (see the earlier discussion of the 1972 sample design). The sampling errors shown for the 1972 estimates can be expected to indicate roughly the magnitude of the errors for the 1967 estimates. The average level of the 1972 errors should be somewhat smaller because the sample was increased in size and was more efficiently designed for the 1972 survey. This general relationship may not hold for specific supplies cost estimates because of the difference in the two sample designs.

- Represents zero. (X) Not applicable. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurements shown (or less than 0.5 percent).

¹Represents total cost of supplies, minerals received for preparation, and purchased machinery installed for establishments that did not report detailed supplies data, and includes estimates for establishments that were not mailed report forms.

²"Cost of minerals received for preparation" are included with "Cost of supplies."

³Excludes industries 1422, 1474, 1475, and 1476 for which figures for "Cost of supplies, not specified by kind" are included in "Cost of supplies specified by kind."

⁴Excludes industry 1021 for which figures for "Cost of minerals received for preparation" are included in "Cost of supplies specified by kind."

⁵Includes "Cost of supplies not specified by kind" and/or "Cost of minerals received for preparation" for those industries where such figures were not shown separately.

⁶"Cost of supplies, not specified by kind" are included in "Cost of supplies specified by kind."

SECTION II, PART 2—Continued

CHAPTER 10. Major Groups 10, 12, 13, and 14—1972 Census of Mineral Industries

The mineral industries, Major Groups 10 to 14, include establishments primarily engaged in mining, developing mines, or exploration activities for minerals; or in providing contract services, including exploration and development services, for mining establishments at the mine, development, or exploration site. In the broad sense, mining covers the extraction of minerals occurring naturally, that is, solids such as coal, various ores, stone, sand and gravel; liquids, such as crude petroleum; and gases, such as natural gas. It also includes quarrying, well operations (such as crude petroleum or natural gas wells, and sulfur wells), milling and mineral beneficiation (crushing, screening, washing, and flotation) typically performed at the mine site.

In general, mining operations are classified by industry on the basis of the principal mineral produced or shipped; or, if development and exploration only is being conducted, on the basis of the principal mineral for which such development and exploration work is in process. The mining of such things as culm banks, ore dumps, and tailing piles is included in the mineral industries and classified according to the principal mineral product derived.

Establishments engaged in contract service operations for minerals establishments are classified in the mineral contract

services (industries 1081, 1112, 1213, 1481, and industry group 138) in accordance with the principal mineral mined or to be mined at the site of the services and, in the case of the oil and gas field services (industry group 138), the type of contract service performed. If the contract service is of the development and exploration type, the contract service establishment is classified on the basis of the principal mineral expected to be mined or recovered at the site and, in the case of industry group 138, the type of service performed.

Separately operated preparation plants are included in mining for all minerals except selected nonmetals such as clay, barite, talc, gypsum, graphite.

In the crude petroleum and natural gas area, Major Group 13, mining activities include, in addition to the operation of oil and gas wells, the extraction of oil from oil sands and oil shale, and the production of natural gasoline and liquefied petroleum gases from natural gas.

The following industries in this major group are those for which information was obtained in the **1972 Census of Manufactures Supplemental Inquiry; Consumption of Materials, Parts, Containers, and Supplies During 1972**, on Form MA-131. They are included in this report.

SIC Codes and Titles

1011—Iron Ores
1021—Copper Ores
1211—Bituminous Coal and Lignite
1311—Crude Petroleum and Natural Gas
1321—Natural Gas Liquids
1381—Drilling Oil and Gas Wells

1389—Oil and Gas Field Services, N.E.C.
1422—Crushed and Broken Limestone
1442—Construction Sand and Gravel
1474—Potash, Soda, and Borate Minerals
1475—Phosphate Rock
1477—Sulfur

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.
(Z) Less than half the unit of measurement shown.

¹Estimates having associated relative standard errors exceeding 15 percent are of limited reliability. However, they may be combined into broader aggregates which are of acceptable reliability. See Explanatory Text for methodology. The 1972 standard errors may be used as approximations of the relative errors for the 1967 estimates. This general relationship may not hold for specific supplies costs estimates due to the difference in the 2 sample designs.

²Not shown separately; included with "Supplies requested in the MA-131 Survey (census code 970099)."

³Represents the total cost of supplies or fuels for establishments that did not report detailed supplies data in the census and also includes estimates for establishments that were not mailed report forms.

⁴This material code was not printed on the survey form. Data represents detail information some establishments listed under "Other important supplies."

⁵The detail cost of supplies as reported in the census of mineral industries is understated by the amount shown in "Other supplies previously specified on the Census report form."

⁶Excludes drilling fluids.

⁷Primarily drilling mud, but includes \$1 million of antifreeze.

⁸Represents phosphate rock only.

⁹Combined to avoid disclosing figures of individual companies.

TABLES

1A	Selected Metalworking Operations, by Industry and Operation: 1972	3
1B	Number of Establishments and Production Workers for Selected Metalworking Operations, by Industry: 1972	24
1C	Coverage of Selected Metalworking Operations, by Industry: 1972	34
2	Number of Production Workers Engaged in Selected Metalworking Operations, by Divisions and States: 1972	36

EXPLANATORY TEXT

The 1972 Census of Manufactures included a special inquiry on "Selected metalworking and related operations" to provide a measurement of employment in certain metalworking and related facilities in manufacturing. The following operations were included in this inquiry: Foundry (iron and steel); foundry (nonferrous, except die casting); die casting (nonferrous metal only); forging—presses, hammers, or upsetters (excluding manufacture of nuts, bolts, etc.); electroplating and other plating; galvanizing and other hot-dip coating; heat treating of metals for production purposes; automatic screw machine department; machine shop; tool and die shop (if separate from machine shop) for jigs, fixtures, dies, and other special tooling; pattern shop (foundry patterns only—metal, wood, etc.); plate or structural fabrication; stamping, blanking, and forming of metals; painting, lacquering, and enameling on metals; plastics molding; assembly of product; shipping department (including packing and crating); hot forging—presses, hammers, or upsetters, excluding manufacture of nuts, bolts, etc; cold forging; and powder metallurgy.

Data on the number of establishments and the number of production workers engaged in specific metalworking operations are shown in table 1A for each of approximately 140 industries included in this special inquiry. The size distribution data in table 1A is based on the number of production workers usually employed in the operation. The number of production workers engaged in these operations is shown for 18 selected operations by industry in table 1B and for 19 selected operations by geographic division and State in table 2.

Information on selected metalworking operations was obtained for practically all industries where such operations are important. For individual industries or groups of in-

dustries, the inquiry on metalworking and related operations was tailored to fit the principal operations that were characteristic of those industries.

Since establishments with less than 10 employees were typically excused from filing reports, these establishments are not included in the metalworking operations data. (See the introduction for further explanation.) Also a few larger establishments that filed standard forms did not report their metalworking operations. This has resulted in an understatement of the number of establishments performing specific operations, primarily in the smallest size class, and to a much smaller degree in an understatement of the number of production workers in the operation.

An approximation of the coverage for each industry is given in table 1C. The coverage is generally highest in industries in which larger establishments have predominance. Similar percentages are not available for geographic divisions and States, although coverage ranges for significant metalworking States would range between 85 and 95 percent.

For the forging industries (SIC 3462 and SIC 3463), table 1A contains separate data for hot forging—presses, hammers, or upsetters (excluding manufacture of nuts, bolts, etc.), and cold forging. These data are included with operation entitled "forging—presses, hammers, or upsetters," in tables 1B and 2.

Since the report form used by respondents in Industry 3471, Plating and Polishing, did not include the metalworking inquiry, the total number of production workers for establishments classified in Industry 3471 are shown separately in table 2. Plating and polishing operations performed by establishments classified in Industry 3471 are excluded from tables 1A, 1B, and 1C.

	Tool and die shop.....	38	15	14	9	583
	Stamping, blanking, and forming of metals.....	42	15	18	9	589

- Represents zero. D Withheld to avoid disclosing figures for individual companies.

¹Very small establishments were excluded from the mail portion of the 1972 Census of Manufactures and, in some instances, a few larger establishments failed to report data for metalworking operations. The result is an understatement of the number of establishments performing specific operations, primarily in the smallest size class, and, to a much smaller degree, in the number of production workers in the operation. The significance of this undercoverage is shown in table 1C.

²These size groups are based on the number of employees engaged in each specific operation, not on total employment in the establishment.

³See table 1C, footnote².

⁴Separate data cannot be published for Industry 3572, Typewriters, without revealing the operation of individual companies, so it has been combined with Industry 3579, Office machines, n.e.c.

3714	Motor vehicle parts and accessories.....	(NA)	(NA)	(NA)	(NA)	12	694

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available.

¹Excludes data on forging operations used in manufacture of bolts, nuts, and other related products.

²Excludes data for the 3,265 establishments classified in Industry 3471, Plating and polishing, which usually are engaged in work on materials owned by others and generally perform electroplating operations.

³See table 1C, footnote 2.

⁴Excludes data for establishments classified in Industry 3479, Metal coating and allied services, which are primarily engaged in galvanizing and other hot-dip coating, usually on materials owned by others.

⁵Separate data cannot be published for Industry 3572, Typewriters, without revealing operations of individual companies, so it has been combined with 3579, Office machines, n.e.c.

- Represents zero.

¹Excludes establishments with less than 10 employees, which were not sent metalworking operations inquiry.²Includes activities for which separate information was asked in metalworking operations inquiry. Therefore, respondents who indicated that item did not apply were inconsistent. They were a small percentage of the total, however (see column 6).

TABLE 2. Number of Production Workers Engaged in Selected Metalworking Operations, by Divisions and States: 1972

Division and State	Ferrous foundry	Nonferrous foundry (except die casting)	Nonferrous die casting	Forgings—presses, hammers, or upsetters	Electroplating and other plating	Plating and polishing industry (SIC 3471)	Galvanizing and other hot-dip coatings	Heat treating of metals	Automatic screw machine department	Machine shop

Note: Precise measurement of coverage percentages are not available for geographic divisions and States. However, coverage ranges for significant metalworking States would range between 85 and 95 percent.

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies.

¹See footnote 1, table 1B.

²See footnote 2, table 1B.

³Represents the total number of production workers classified in the plating and polishing industry. Figure is rounded to the nearest hundred, as are division and State totals, to correspond with data shown for this industry in table 2 of report MC72(2)-34D.

⁴See footnote 4, table 1B.

Special Statistics

Manufacturing Activity in Government Establishments

EXPLANATORY TEXT

GENERAL

This special report presents data of manufacturing activities for selected government establishments within the United States. These data are not included in other 1972 Census of Manufactures reports, which cover privately operated establishments only. Manufacturing establishments owned by the Federal Government and operated by private companies, either for the government or for their own accounts, are included with privately operated establishments. Three types of establishments are covered in this report: (1) Manufacturing facilities owned and operated by the Department of Defense; (2) prison industries (Federal, District of Columbia, and State); and (3) manufacturing facilities owned and operated by other U.S. Government agencies. No tables are shown for this last category, although some descriptive material is presented later in the text. The industry classification for the commodity and industry groups in this report are based on the 1967 standard industrial classification system. The data were prepared with the cooperation of the Department of Defense, the Department of Justice, the Department of Interior, and the District of Columbia and State prison systems.

MANUFACTURING FACILITIES OWNED AND OPERATED BY THE DEPARTMENT OF DEFENSE

Coverage of MA-171 Survey

Data for manufacturing facilities operated by the Department of Defense were collected from 93 establishments on Form MA-171 (Department of Defense owned and operated

establishments) and are shown in tables 1A, 1B, and 1C. Although these establishments may also be engaged in non-manufacturing activities at the same location, the statistics represent only their activities relating to manufacturing. All manufacturing installations which produce goods or perform manufacturing services, such as industrial research and development, and the conversion and modification of ships and aircraft by the Army, Navy, and Air Force, are included in this report. However, this report does not include activities of Defense Department installations which serve primarily or exclusively their own installations (e.g., bakeries and some machine shops). All printing and publishing activities are excluded because almost every large government installation engages in these activities to some degree, thus making coverage difficult.

Total revenue at Department of Defense operated manufacturing facilities amounted to \$7.1 billion in 1972 as compared with \$4.3 billion in 1967. In 1972, total employment was 281.5 thousand of which 171.0 thousand were production workers. Total wages and salaries for each classification were \$3.6 billion and \$2.0 billion, respectively.

Explanation of Terms for MA-171 Survey

In this survey, wage board and graded employees refer to those nonmilitary personnel employed by Department of Defense owned-and-operated establishments. Costs represent the cost of materials, supplies, and parts used; the cost of

contractual services; and other costs directly related to the manufacturing activities of the installation. Value of shipments or receipts for services represents total billings (including progress billings) based on the Industrial Fund Accounting System of the Department of Defense, including receipts for construction and conversion; manufacture and assembly; and research and development. Unbilled costs of work in progress are reported separately. Total revenue is defined as total billings adjusted by the increase or decrease in the unbilled costs of work in progress. Value added by manufacture is shown in columns A and B of table 1A. Value added "A" is total revenue less cost of materials, while value added "B" is total revenue less cost of materials, contractual service, and other costs. Prior to 1970, value added represented total revenue less cost of materials.

PRISON INDUSTRIES (FEDERAL, DISTRICT OF COLUMBIA, AND STATE)

The Form MC-D4 (Manufactures Report From Penal Institutions) was used in collecting State and Federal prison data reported in tables 2A and 2B. During 1972, manufactured products valued at \$172.2 million were produced at prisons in the United States of which \$56.3 million was at Federal prisons. The comparable 1967 data were \$140.5 million in manufactured products of which \$44.0 million was Federal prison production. These data include the value of products manufactured for use within the institutions as well as products transferred to other governmental agencies or for sale

in the open market. Tables 2A and 2B show shipments data by industry groupings; table 2B also shows total Federal penitentiary shipments and the State penitentiary shipments for geographic divisions and States.

MANUFACTURING FACILITIES OWNED AND OPERATED BY OTHER U.S. GOVERNMENT AGENCIES

This report does not include tables on other governmental manufacturing facilities such as the manufacturing operations of the Bureau of Mines, U.S. Department of Interior. That agency is the primary producer of refined helium in the United States. During 1972, it operated two plants from which 174.0 million cubic feet of helium valued at \$6 million were shipped. The average number of employees totaled 258 of which 148 were production and related workers, and the total wages and salaries paid amounted to approximately \$2.7 million. Comparable figures for other years as well as additional detail for production, shipments, consumption, prices, reserves, and activities relating to conservation and technology appear in the Minerals Yearbook for 1972, a publication of the Bureau of Mines.

Excluded from this report are the manufacturing activities of the Government Printing Office, The National Aeronautic and Space Administration, and the Tennessee Valley Authority. The operation of these agencies are covered in their annual reports. Also excluded are the minor manufacturing activities of such other government agencies as the Post Office Department and the General Services Administration.

Note: See text for an explanation of the terms in this table. Detail may not add to totals due to independent rounding. Value added "A" represents total revenue less cost of materials, while value added "B" is total revenue less cost of materials, contractual services, and other costs.

- Represents zero. (Z) Less than .05.

TABLE 1B. Department of Defense Facilities—General Statistics by Industry Group and Geographic Area: 1972

Note: See text for an explanation of the terms in this table. Detail may not add to totals due to independent rounding. Value added "A" represents total revenue less cost of materials, while value added "B" is total revenue less cost of materials, contractual services, and other costs.

- Represents zero. (Z) Less than .05.

¹Based on descriptions shown in the 1967 edition of "Standard Metropolitan Statistical Areas," Executive Office of the President, Bureau of the Budget (now Office of Management and Budget).

TABLES

1 Share of Total Value Added by Manufacture Accounted for by the 50, 100, 150, and 200 Largest Manufacturing Companies: 1972 and Earlier Years	4
2 Share of Total Value Added by Manufacture Accounted for by the 50 and 100 Largest Identical Manufacturing Companies: 1972 and Earlier Years	4
3 Changes in Rank Group of the 50 Largest Identical Companies: 1972 and Earlier Years	5
4 Share of Value Added, Employment, Payroll, Value of Shipments, and Capital Expenditures Accounted for by the 200 Largest Companies: 1972 and 1967	5
5 Share of Value of Shipments Accounted for by the 4, 8, 20, and 50 Largest Companies in Each Manufacturing Industry: 1972 and Earlier Years	6
6 Share of Value of Shipments of Each Class of Product Accounted for by the 4, 8, 20, and 50 Largest Companies: 1972 and Earlier Years	50
7 Share of Value of Shipments of Selected Product Classes Primary to More Than One Industry Accounted for by the 4 and 8 Largest Companies: 1972 and Earlier Years	162
8 Share of Selected Items Accounted for by the 4, 8, 20, and 50 Largest Companies Ranked on Value of Shipments for Each Industry: 1972.	165

EXPLANATORY TEXT

EXPLANATIONS FOR TABLES 1 TO 4

These four tables reflect the activity of the largest companies in the industrial sector as a whole. A "company" is defined, for this purpose, as the total of its industrial establishments, including not only its manufacturing plants but also auxiliary establishments such as warehouses and central administrative offices.

Concentration at this level is measured in terms of value added by manufacture. In these census tabulations, value added is preferable to sales or shipments in measuring total company size, since an aggregation of shipments from the census establishment records would contain duplication owing to intracompany transfers of products. Value added for all manufacturing establishments of a given company was aggregated irrespective of the industry classification of the individual establishments. The companies were then arrayed by magnitude of value added in each specified year and totals computed for the 50, 100, 150, and 200 largest companies.

The standard formula for calculating value added by manufacture since 1958 differs from the one used for the 1954 census and earlier years. During the earlier period, the value added of an establishment was calculated by subtracting the cost of materials, supplies, containers, fuels, purchased electric energy, and contract work from the value of shipments for products manufactured plus miscellaneous receipts for services rendered. This is known as unadjusted value added in census publications. Beginning with 1958, the measure of value added has been adjusted for each establishment in two respects. Value added now includes: (1) Value added by merchandising (that is, the difference between the sales value and cost of merchandise sold without further manufacture, processing, or assembly); and (2) an adjustment for the net change in finished goods and work-in-process inventories between the beginning and the end of the year. The resulting figure is the adjusted value added.

Thus, the rankings of the 200 largest companies in 1947 and 1954 were based on unadjusted value added; those for later years were based on adjusted value added. The use of these different measures for determining size should have little effect on the ranking and relative shares of individual companies or on the aggregate shares of the 50, 100, 150, or 200 largest companies in each year.

Except for tables 2 and 3, companies were classified in size groups in each particular year based on their size in that year. Thus, a size group (such as the top four) does not necessarily include the same companies from year to year. The extent to which large companies have grown or declined over the years is reflected in tables 2 and 3. Table 3 shows, for example, that,

of the companies which constituted the 50 largest in 1972 only 33 were among the 50 largest in the 1954 census.

EXPLANATIONS FOR TABLE 5

This table is based on the establishment approach described in the Introduction. A "company" is defined as the total of the individual establishments under one ownership within an industry. Consequently, the same company may appear in several industries if it has diversified activities. In addition, the following points should be kept in mind:

(1) The top 4, 8, 20, and 50 companies are the largest for any particular year based on their value of shipments in that year and are, therefore, not necessarily the same companies from year to year.

(2) For a few industries, as indicated by footnotes, value added by manufacture rather than value of shipments has been used to determine the size of companies. This is considered necessary for industries in which the aggregate value of shipments contains a large amount of duplication because of shipments of semifinished products between establishments. An example is SIC 3585, Air-Conditioning and Warm Air Heating Equipment and Commercial and Industrial Refrigeration Equipment, in which there are extensive intraindustry sales and transfers of components and subassemblies to producers of complete refrigerators and air conditioners. (The historical changes in the method for calculating value added by manufacture are described in the discussion of tables 1 through 4.)

(3) Ratios are shown for years prior to 1972 only if the SIC industry definitions were considered comparable. As noted in the Introduction, there were extensive revisions in the SIC in 1972 which, in table 5, result in suppression of data for earlier years for a substantial number of industries. In general, the criteria used for judging the comparability of definitions was the effect of the change on number of employees in the industry under the old and new definitions. If the new definition caused more than a 2-percent change, the historical data were suppressed.

(4) The 1966 and 1970 concentration ratios are based on data developed in the Annual Survey of Manufactures. Since the industry aggregates which provide the denominators in the concentration ratios are based on a sample, they are subject to sampling errors. In the 1970 concentration report referred to

EXPLANATORY TEXT—Continued

in the Introduction, sampling errors for each industry as well as a more complete description of the Annual Survey of Manufactures sample are shown.

EXPLANATIONS FOR TABLES 6 AND 7

The product classes (5-digit) and product groups (4-digit) shown in these tables are those developed by the Census Bureau within the framework of the Standard Industrial Classification. In general, the first four digits of the product code numbers refer to the SIC industry in which the product is primarily made. For example, in the product class number 20232, Canned milk products, the first four digits (2023) identify the Condensed and Evaporated Milk industry. The four-digit code numbers shown in these tables (followed by a hyphen) identify product groups rather than industries. The number 2023 identifies the total shipments of condensed and evaporated milk products, whether made in industry 2023 or in other industries. Complications occur in the few SIC industries defined in terms of processes or equipment used as well as products made. As an example, processed pork as a product of slaughtering plants is coded 20126, but if made in meat processing plants is coded 20136. Since these products are similar despite the SIC distinction, data for them have been brought together in this publication in table 7.

Within each product class or group shown in tables 6 and 7, a "company" is represented by the sum of the shipments of that product by all of its manufacturing plants. Consequently, the same company often appears in several different product classes or groups.

As discussed in the section on Census Report Forms, establishments with fewer than 10 employees were excused from filing census reports. Limited data on payrolls, sales, and industry classification were made available to the Census Bureau from administrative records of the Social Security Administration and the Internal Revenue Service. For total manufacturing, these establishments account for less than 3 percent of the payrolls and value added, but this proportion is somewhat larger for industries characterized by small establishments such as lumber, printing, and apparel. The effect of using administrative records for these establishments generally increases the proportional size of the "not specified by kind" (n.s.k.) product classes, because their shipments could not be assigned to

specific 5-digit product classes. Also included in this n.s.k. category are those establishments with 10 employees or more which, for various reasons, did not report the product class detail.

Concentration ratios are not shown for the n.s.k., product classes since they would be of little or no significance. However, if there is a significant increase on the value of shipments of an n.s.k., product class, the establishments comprising the n.s.k., are analyzed and some or all of their value of shipments prorated to the specific 5-digit classes affected. Their concentration ratios are then recalculated.

EXPLANATIONS FOR TABLE 8

In this table, a "company" is defined as the total of the individual establishments under one ownership within an industry. Consequently, the same enterprise may appear in several industries if it has diversified activities. It may be large in some industries and small in others.

Company size within an industry is determined by the total value of shipments and other receipts of its establishments. In addition to sales to customers, this total includes the value of products transferred between establishments of the same company (intracompany transfers). For a few industries, as indicated by footnotes, value added by manufacture rather than value of shipments has been used to determine company size. This was considered necessary for industries in which the aggregate value of shipments contains a large amount of duplication because of shipments of products between establishments.

Within an industry, each line of the table was based on the same companies throughout the line. The ranking of the four largest companies, for example, was determined by their value of shipments (or value added) and the other percentages represent the proportions of employment, payrolls, etc., accounted for by the same four companies.

Data in this publication may differ slightly from the industry and area reports previously published. These differences are due to corrections which were made for minor errors identified after the industry and area reports were issued. This report reflects these corrections.

TABLE 1. Share of Total Value Added by Manufacture Accounted for by the 50, 100, 150, and 200 Largest Manufacturing Companies: 1972 and Earlier Years

Company rank group	Percent of value added by manufacture								
	1972	1970	1967	1966	1963	1962	1958	1954	1947
Largest 50 companies.....	25	24	25	25	25	24	23	23	17
Largest 100 companies.....	33	33	33	33	33	32	30	30	23
Largest 150 companies.....	39	38	38	38	37	36	35	34	27
Largest 200 companies.....	43	43	42	42	41	40	38	37	30

Note: 1962, 1966, and 1970 data are based on the Annual Survey of Manufactures. "Largest companies" are those which were the largest in each of the specified years.

TABLE 2. Share of Total Value Added by Manufacture Accounted for by the 50 and 100 Largest Identical Manufacturing Companies: 1972 and Earlier Years

Year of company ranking, and company rank group (a)	Year of company ranking, and company rank group								
	1972 (b)	1970 (c)	1967 (d)	1966 (e)	1963 (f)	1962 (g)	1958 (h)	1954 (i)	1947 (j)
1972

1958									
Largest 50 companies.....	20	22	23	24	24	24	23	23	16
Largest 100 companies.....	27	29	31	31	32	31	30	29	22
1954									
Largest 50 companies.....	20	21	23	23	24	23	23	23	16
Largest 100 companies.....	27	28	31	31	31	30	30	30	21
1947									
Largest 50 companies.....	17	19	20	21	21	21	20	21	17
Largest 100 companies.....	24	26	27	27	28	27	27	27	23

Note: The 100 largest companies in each specified year were selected and their proportion of total value added by manufacture in each of the other years was computed. Thus this table measures the changes in concentration ratios for a fixed group of companies from one year to another. In case of mergers, the larger of the two at the time of merger was considered to be the predecessor company.

TABLE 3. Changes in Rank Group of the 50 Largest Identical Companies: 1972 and Earlier Years

Year of company ranking and company rank group	Year of company ranking and company rank group

1947									
Among 50 largest.....	25	24	24	25	30	29	34	35	50
Among 51st to 100th largest.....	13	13	17	18	16	16	12	12	-
Among 101st to 200th largest.....	6	8	5	4	3	5	4	3	-
Not among 200 largest.....	6	5	4	3	1	-	-	-	-

Note: 1962, 1966, and 1970 data are based on the Annual Survey of Manufactures, other years on the census of manufactures. The 50 largest companies in each specified year were selected and the rank group of the same companies determined in other years. Thus, this table measures the shifting of position of a fixed group of companies from one year to another. In case of mergers, the larger of the two at the time of the merger was considered to be the predecessor company.

TABLE 4. Share of Value Added, Employment, Payroll, Value of Shipments, and Capital Expenditures Accounted for by the 200 Largest Companies: 1972 and 1967

(Percent)

Company rank group based on value added by manufacture	Value added by manufacture	All employees ¹		Production workers			Value of shipments ²	Capital expenditures, new
		Number	Payroll	Number	Man-hours	Wages		
50 largest.....	25	17	22	17	18	24	24	26
.....1967..	25	20	25	18	18	23	25	27
51st to 100th largest.....	9	6	8	6	6	7	8	8
.....1967..	8	6	7	5	6	6	8	13
101st to 150th largest.....	6	5	5	5	5	6	6	6
.....1967..	5	4	5	4	4	4	6	6
151st to 200th largest.....	4	3	3	3	3	4	5	5
.....1967..	4	4	3	3	3	3	4	4
200 largest.....	43	31	37	32	32	40	43	46
.....1967..	42	34	40	30	31	37	43	51

Note: All percentages are independently rounded and do not necessarily add to totals.

¹Includes employees in central administrative offices and auxiliaries serving manufacturing establishments.

²Includes a substantial, but unmeasurable amount, of duplication because of shipments of materials and products among manufacturing establishments for further processing.

TABLE 5. Share of Value of Shipments Accounted for by the 4, 8, 20, and 50 Largest Companies in Each Manufacturing Industry: 1972 and Earlier Years

1972 code	Industry and year ¹	Companies ²	Value of industry shipments ³				Primary product special- ization ratio ⁵ (percent)	Coverage ratio ⁶ (percent)	Standard error of estimate ⁷ (percent)

Note: The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

(X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Data suppressed because some of the largest companies were approximately the same size as others not included in the sample, and therefore a reliable numerator could not be computed.

¹Industry codes and descriptions are based on the 1972 Standard Industrial Classification Manual (SIC). This classification system represents a substantial revision from the previous 1957 edition as modified through 1967 and was put into effect with the final reports in the 1972 census. The concentration ratios in 1958 were tabulated on the 1945 edition to preserve comparability to prior years. Also, in 1958, establishments in Alaska and Hawaii were not included as part of U.S. industry totals since these States did not attain Statehood until 1959. Data and ratios for 1958 and prior years are shown in this report only if the industry definitions are so closely comparable that the concentration ratios could not be affected by the shifting of plants due to industry classification changes or by the change in treatment of Alaska and Hawaii. (See "Concentration Ratios in Manufacturing Industry: 1958," Part I, table 7, for comparability of old-new industry definitions.)

²The determination of company affiliation of establishments is based on census reports and publicly available records. Value of shipment totals for establishments have been summarized into company totals in each manufacturing industry. "Largest" companies are determined by each company's value of shipments in the specified industry.

³Value of shipments figures are not completely comparable between the years 1963-72 and prior years. They include for all establishments classified in the industry (a) value of products primary to the industry, (b) value of all secondary products which are primary to other industries, (c) value of miscellaneous receipts such as receipts for contract and commission work on materials owned by others, scrap, salable refuse, repairs, etc., and (d) value of resales—i.e., products resold in same condition as bought. In 1958 and prior years value of resales was excluded from value of shipments.

⁴The percentages consist of the sum of the value of shipments of the largest 4 companies (or 8, 20, or 50 companies), divided by the total value of shipments of the industry.

⁵The "primary product specialization ratio" measures the extent to which plants classified in the industry specialize in making products regarded as primary to the industry; that is, value of shipments of primary products of plants in the industry is expressed as a ratio of the total shipments of all products made by these establishments (excluding miscellaneous receipts, such as receipts for contract and commission work on materials owned by others, scrap and salable refuse, repair, etc.).

⁶The "coverage ratio" measures the extent to which all shipments of primary products of an industry are made by plants classified in the industry, as distinguished from secondary producers elsewhere; that is, value of shipments of the primary products made by plants classified in the industry is expressed as a ratio of the total shipments of primary products made by all producers, both in and out of the specified industry.

⁷A description of the standard error of estimate is given in the Introduction under "Qualifications of the Data". The percentage standard errors shown are approximate relative standard errors of level for 1970 and 1966.

⁸Although, the 1972 definition of this industry is the same as that used in the 1967 SIC system, the content of the industry has changed slightly. The net result of these changes accounts for less than 3 percent of the industry aggregate and the 1972 data are considered to be directly comparable to prior years data.

⁹Value added by manufacture is shown for this industry rather than value of shipments because the latter contains a substantial and unmeasurable amount of duplication. The calculations for the 4, 8, 20, and 50 largest companies also are based on value added. The value added figure for 1963 and later years is adjusted value added; for 1958 and prior years it is unadjusted value added. Adjusted value added is calculated by subtracting the cost of materials including cost of resales from the value of shipments including resales and adjusting for the change in finished products and work-in-process inventories during the year. Unadjusted value added excludes value added by resales and any inventory change. The standard error shown for this industry is for value added by manufacturing.

¹⁰For 1972, industry 2015 was split to form this industry and industry 2017.

¹¹Not completely comparable to 1954 and later years because of a change in industry classification. For discussion of 1947 to 1954 comparability, see 1954 Census of Manufactures, Volume II, Industry Statistics, "Dairy Products."

¹²In 1954, industry 2027, Fluid Milk, was composed of two industries, 2026, Fluid Milk (only), and 2027, Fluid Milk and Other Products. In 1954 figures on value of shipments and share of value of shipments accounted for by the 4 and 8 largest companies have been recalculated on a basis comparable to 1958. In 1947 and earlier years, establishments primarily distributing fluid milk were classified as nonmanufacturing.

¹³Value of production shown for this industry rather than value of shipments. For 1963 and subsequent years the figure includes value of primary and secondary products made, miscellaneous receipts such as receipts for contract and commission work on materials owned by others, scrap and other salable refuse, and the value of products bought and resold in the same condition; for 1958 and prior years resales are excluded.

TABLE 5. Share of Value of Shipments Accounted for by the 4, 8, 20, and 50 Largest Companies in Each Manufacturing Industry: 1972 and Earlier Years—Continued

(Footnotes for table 5--Continued)

¹⁴For 1972, this industry was split to form a new industry 2038; in 1970 and prior years, the statistics for industry 2038 were included in industry 2037, Frozen Fruits and Vegetables.

¹⁵For 1972, this industry was split to form a new industry 2048.

¹⁶Establishments in Alaska and Hawaii are important producers in this industry. Recomputed figures cannot be shown for the 4, 8, 20, and 50 companies prior to 1963 without disclosing the operation of individual companies in Alaska and Hawaii.

¹⁷The discrepancy between these figures and those appearing in table 1 of the 1958 Census of Manufactures, Volume II, Chapter 20H, Fats and Oils (82 companies and \$994,865 thousand value of shipments) is due to a misclassification of 16 small companies into industry 2075. These companies should have been classified into industry 2079, Shortening and Cooking Oils.

¹⁸The 1957 SIC combined into this industry two industries which were separate in the 1945 SIC: industry 2882, Linseed Oil Mills, and industry 2884, Vegetable Oil Mills, N.E.C. The 1958 value of shipments figures for these two industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963 and later years.

¹⁹The SIC, as revised in 1963, combined into this industry two industries which were separate in the 1945 SIC: industry 2886, Grease and Tallow, and industry 2889, Animal Oils, N.E.C. The 1958 value of shipments figures for these two industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963 and later years.

²⁰The 1957 SIC combined into this industry two industries which were separate in the 1945 SIC: industry 2092, Shortening and Cooking Oils, and industry 2093, Margarine. The 1958 value of shipments figures for these two industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963 and later years.

²¹Includes data for 21 wholesale distributors of malt liquors. Each had less than 10 employees and had no significant effect on any of the statistics for the industry except the establishment and company counts.

²²Bonded store rooms which were engaged in blending wines were excluded in 1947.

²³The 1954 data for industry 2036 are not completely comparable to 1958 and subsequent years; 1947 data are not available. In 1947 industry 2036, Packaged Seafood, was in part (frozen packaged seafood) included in industry 2037, Frozen Fruits, Vegetables, and Fish, and in part (fresh packaged seafood) included in nonmanufacturing industries (principally industry 5046, Fish and Seafoods). A significant but undetermined number of establishments classified in industry 2036 in 1958 and 1963 were probably classified in industry 5046 in 1954.

²⁴Comparable data are not available because of significant changes in the 1947 classification of plants or products in this industry.

²⁵Jobbers were included in 1947 but excluded in 1954 and later years.

²⁶Value of production shown for this industry in 1958 and prior years whereas value of shipments is shown for 1963 and later years. This change does not affect the comparability significantly. For industries 2253, 2254, 2256 and 2259, the method of computing coverage and specialization ratios was changed in 1967, causing a significant decrease in some ratios.

²⁷For 1972, industry 2256 was split to form new industries 2257 and 2258.

²⁸The SIC codes combined in this industry are the two industries which were separate in the 1957 SIC: industry 2255, Knit Glove Mills, and industry 2259, Knitting Mills, N.E.C. The 1958 value of production figures for these two industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963 and later years.

²⁹Includes finished cotton broadwoven fabrics (except commission finishing) which are also primary to industry 2211, Weaving Mills, Cotton.

³⁰Includes finished synthetic fabrics (except commission finishing) which are also primary to industry 2221, Weaving Mills, Synthetics.

³¹Includes finished yarns except wool which are also primary to industry 2281, Yarn Mills, Except Wool.

³²Excludes shipments of finished purchased yarns from establishments classified in industry 2269, Finishing Plants, N.E.C.

³³This industry included a large number of very small establishments in 1958, and there is a possibility that some were misclassified as to industry. Industry misclassification of these small establishments does not affect significantly any statistics other than the number of establishments and companies.

³⁴This industry included a large number of very small establishments in 1963 and some of these small establishments may have been misclassified as to industry. Industry misclassification of these small establishments does not affect significantly any statistics other than the number of establishments and companies.

³⁵The 1972 definition of this industry has been revised from that used in the 1967 SIC manual. In 1967, industry 2297 was titled Scouring and Combing Mill Products. This is now product class 22993 in industry 2299, Textile Goods, N.E.C. In 1967, Nonwoven Textiles was product class 22991 in industry 2299.

³⁶Includes products of Knitting Mills (SIC Group 225) which are primary to industries 2253 and 2254.

³⁷Includes the shipments of women's and children's knit underwear and nightwear made in knitting mills (primary products of industry 2254) as well as the shipments of these products cut and sewed from purchased knit cloth.

³⁸The 1957 SIC combined into this industry four industries which were separate in the 1945 SIC: industry 2281, Fur-Felt Hats and Hat Bodies; industry 2282, Wool-Felt Hats and Hat Bodies; industry 2283, Straw Hats; and industry 2325, Men's and Boys' Cloth Hats. The 1958 value of production figures for these four industries have been combined and the ratios for the largest 4 and 8 companies have been recomputed on a basis comparable to 1963 and later years.

³⁹Includes the shipments of children's knit outerwear made in Knitting Mills (primary products of industry 2253) as well as the shipments of these products cut and sewed from purchased knit cloth.

⁴⁰Includes the shipments of fabric gloves made in Knitting Mills (primary products of industry 2259) as well as the shipments of fabric gloves cut and sewed from purchased fabrics.

⁴¹The 1957 SIC combined in this industry two industries which were separate in the 1945 SIC: industry 2381, Fabric Dress Gloves, and industry 2382, Fabric Work Gloves. The 1958 value of shipments figures for these two industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963 and later years.

⁴²A review of the reports for 1963 indicated that there were approximately 300 very small companies included in this industry which described their activities as custom drapery producers, interior decorators workrooms, etc. Approximately half of these companies were classified as nonmanufacturing in the 1958 Census.

⁴³For 1963 and subsequent years, the value of shipments total includes shipments of logs for establishments that own and maintain timberlands but contract the cutting of logs to others. The establishments that actually performed the logging on a contract basis also reported their receipts for contract logging under the heading total value of shipments. Thus, an undetermined amount of duplication exists in the shipments total. The figures previously reported for 1958 and prior years do not include shipments for timberland owners that do not perform their own logging.

⁴⁴Comparable data are not available for prior years due to a significant revision in the 1972 SIC system. This industry as now constituted includes wood frames for household furniture which were previously classified in industry 2512 under 1967 product class 25126.

⁴⁵The low coverage ratio for 1963 was due to the large amount of wood chips manufactured by establishments classified in industry 2421. In 1967, wood chips were reclassified from industry 2429 to industry 2421.

⁴⁶Comparable data are not available for prior years due to a significant revision in the 1972 SIC system. Custom cabinetwork, to be built-in (1967 product class 24317) was reclassified to industry 2434.

⁴⁷Comparable data are not available for prior years due to a major revision in the 1972 SIC system. Industry 2434 was formed by combining the manufacture of custom cabinetwork, to be built-in, (1967 product class 24317) with wood kitchen cabinets (1967 product class 25114).

⁴⁸For 1972, industry 2432 was split to form new industries 2435 and 2436.

⁴⁹This industry was revised for 1972. Historical data are not available. All products now classified in industry 2439 were formerly part of old industry 2433, Prefabricated Wood Structures. The balance of old industry 2433 is now classified as industry 2452.

⁵⁰Comparable data for prior years are not available due to a major revision in the 1972 SIC system. This industry was previously identified under product class 24992 as a part of industry 2499.

⁵¹For 1972, industry codes 2442, 2443, and 2445 were combined to form industry 2449.

⁵²Comparable data for prior years are not available due to a major revision in the 1972 SIC system. All products now classified in this industry were formerly part of industry 3791.

⁵³Comparable data for prior years are not available due to a major revision in the 1972 SIC system. All products now classified in industry 2452 were formerly part of old industry 2433. The balance of old industry 2433 is now classified as 2439.

⁵⁴Comparable data for prior years are not available due to a major revision in the 1972 SIC system. This industry was previously identified as product class 24993 under industry 2499.

⁵⁵This industry was revised for 1972. Historical data are not available. The industry as now constituted excludes pallets and skids (1967 product class code 24992) and particleboard (1967 product class code 24993) which were reclassified to product classes 24480 and 24920 respectively.

⁵⁶Comparable data for prior years are not available due to a significant revision in the 1972 SIC system. Radio, phonograph, stereo wood cabinets and sewing machine cabinets were reclassified to new SIC industry 2517, and wood kitchen cabinets were reclassified to new SIC industry 2434.

TABLE 5. Share of Value of Shipments Accounted for by the 4, 8, 20, and 50 Largest Companies in Each Manufacturing Industry: 1972 and Earlier Years—Continued

(Footnotes for table 5--Continued)

⁵⁷Data for 1972 are not completely comparable to earlier data due to a significant revision in the 1972 SIC system. The industry as now constituted excludes wood frames for household furniture (1967 product class 25126) which was reclassified to industry 2426.

⁵⁸Comparable data for previous years are not available due to a significant revision in the 1972 SIC system. This industry was previously classified under industry 2511 as product class 25111 and part of product class 25112.

⁵⁹While there has been no change in the 1972 SIC, data for 1972 are not completely comparable to those published for earlier years since a number of establishments previously classified in this industry are now included in industries 2621 and 2631.

⁶⁰Beginning with 1958, integrated pulp and paper companies were given the option of reporting their pulp and paper (or board) operations on a combined basis when both were conducted at a single physical location. Most integrated companies exercise this option and file a single report covering their pulp, paper (or board) making operations at a single physical location, but a few with departmental accounting choose to report separately for the pulp mill and paper (or board) mill. The other pulp mills separately reported are: (1) those exclusively selling their pulp on the market (i.e., not associated or affiliated with a paper and board mill), and (2) those pulp mills affiliated or associated with paper or board mills but operated at a different physical location from the paper or board mill(s).

⁶¹This is a minimum ratio (the exact ratio is withheld to avoid disclosing figures for individual companies).

⁶²This industry was revised for 1972; historical data are not available. The stationary products which now constitute industry 2648 were classified in the 1967 SIC system in industry 2649 under product class 26491.

⁶³Comparable data are not available for prior years due to a significant revision in the 1972 SIC system. The industry as now constituted includes wallpaper (1967 SIC industry 2644) and excludes stationery products (1967 product class 26491).

⁶⁴Data for 1972 are not completely comparable to earlier data due to a significant revision in the 1972 SIC system. Industry 2751 was split into two separate industries: This industry and commercial printing, gravure (industry 2754, 1967 product classes 27517 and 27518).

⁶⁵Data for 1972 are not completely comparable to earlier data due to a significant revision in the 1972 SIC system. Industry 2752 was split into two separate industries: This industry and lithographic platemaking and related services (industry 2795, 1967 product class 27527).

⁶⁶Comparable data for prior years are not available due to a major revision in the 1972 SIC system; this industry was previously identified as product classes 27517 and 27512 under industry 2751.

⁶⁷Comparable data for prior years are not available due to a major revision in the 1972 SIC system; this industry was previously identified as product class 27527 under industry 2752.

⁶⁸Comparable data for prior years are not available due to a significant revision in the 1972 SIC system. The 1972 revisions transferred the manufacture of household bleaches to industry 2842; the manufacture of synthetic ammonia, nitric acid, and ammonium compounds to industry 2873; and the manufacture of phosphoric acid to industry 2874.

⁶⁹Government-owned establishments that are privately operated are included in this industry but did not enter into the calculation of the specialization and coverage ratios as all dollar receipts for these establishments were included in "miscellaneous receipts".

⁷⁰Comparable data are not available for 1970 and earlier years due to a significant revision in the 1972 SIC system. The 1972 revisions transferred the manufacture of unsupported plastics film, sheets, rods, and tubes; regenerated cellulosic products, except rayon; and custom compounded purchased resins to industry 3079. In addition, the production of synthetic resin adhesives, from resins manufactured in the same establishment, was transferred to industry 2881.

⁷¹This industry was revised for 1972; historical data are not available. The 1972 revisions transferred the manufacture of household insecticides and repellants to industry 2879. In addition, the production of household liquid and dry bleaches was transferred from industry 2819 to this industry.

⁷²Data for 1972 are not completely comparable to earlier data due to a significant revision in the 1972 SIC system. Caulking and sealant compounds, formerly classified in product class 28518, were reclassified into industry 2891. The degree of change based on total employment is estimated to be 4 percent.

⁷³Comparable data for 1970 and earlier years are not available due to a major revision in the 1972 SIC system. This industry was formed by combining synthetic ammonia, nitric acid, and ammonium compounds (1967 product class 28191); urea (part of 1967 product class 28182); and fertilizer materials of organic origin (part of 1967 product class 28712).

⁷⁴Comparable data for 1970 and earlier years are not available due to a major revision in the 1972 SIC system. Industry 2874 was formed by combining most of the products of old industry 2871, which includes superphosphate, other phosphatic fertilizer materials, and mixed fertilizers produced from one or more materials made in the same plant, with phosphoric acid which was previously classified in 1967 product class 28194 as part of industry 2819.

⁷⁵Comparable data for 1970 and earlier years are not available due to a major revision in the 1972 SIC system. The industry as now constituted includes the manufacture of household insecticides and repellants which were previously classified as product class 28421 in industry 2842.

⁷⁶Comparable data are not available for 1970 and earlier years due to a significant revision in the 1972 SIC system. This industry as now constituted includes synthetic resin adhesives from resins manufactured in the same establishment (formerly in industry 2821), caulking compounds and sealants (formerly in industry 2851), rubber cement (formerly in industry 3069), and sealants, n.e.c. (formerly in industry 2899), and excludes gelatin and sizes (now in industry 2899).

⁷⁷Data for 1972 are not completely comparable to earlier data due to a slight revision in the 1972 SIC system. The industry as now constituted includes gelatin, except ready-to-eat desserts, (formerly classified in industry 2891), sizes (formerly in industry 2891), and embalming chemicals (formerly in industry 3994), and excludes sealants, n.e.c. (now classified in industry 2991). The degree of change, based on total employment, is estimated to be 5 percent.

⁷⁸Includes lubricating oils and greases which are also primary to industry 2992, Lubricating Oils and Greases.

⁷⁹Includes lubricating oils and greases which are also primary to industry 2911, Petroleum Refining.

⁸⁰Data for 1972 are not directly comparable to earlier data due to a significant revision in the 1972 SIC system. Plastics footwear which was classified in industry 3079 in 1967, is now included in industry 3021. However, the degree of change based on total employment is estimated to be 11 percent.

⁸¹The rubber and plastics hose and belting industry is included for the first time in the census of manufactures for 1972. The industry includes all of 1967 product class 30691, Rubber and plastics belts and belting; and product class 30692, Rubber hose and tubing, except 30692 81, Tubing, except medical and surgical and reinforced; part of 1967 product class 30795, Industrial plastics products and product class 30798, Consumer and commercial plastics products, n.e.c.

⁸²This industry was significantly revised for 1972. The statistics for this industry, as classified under the 1972 edition of the SIC manual, were unchanged as to code number from the previous classification, but were significantly changed in comparison with data classified by the previous system. All of 1967 product class 30691, Rubber and plastics belts and belting and all of 1967 product class 30692, Rubber hose and tubing except, product code 30692 81 Tubing, except medical and surgical and reinforced, are now classified in industry 3041, Rubber and Plastics Hose and Belting. Tubing, except medical and surgical and reinforced, is now included in product class 30695. In addition, seals and packing (former product codes 30695 26, 27 and 28) are now included in industry 3293; and latex and solvent-type cement (former product codes 30698 64 and 65) are now classified in industry 3291.

⁸³Data for 1972 are not directly comparable to earlier data due to a significant revision in the 1972 SIC system. However, the degree of change, based on total employment, is estimated to be 9 percent.

⁸⁴Value of production shown for this industry in 1958 and prior years whereas value of shipments is shown for 1963 and later years. This change does not affect the comparability significantly.

⁸⁵Comparable data are not available because of significant changes in the 1947 classification of plants or products in this industry.

⁸⁶For 1972, industry 3141 was split to form new industries: 3143, 3144, and 3149.

⁸⁷Data for 1972 are not completely comparable to earlier data due to a significant revision in the 1972 SIC system. Industrial leather belting was reclassified to industry 3199, Leather Goods, N.E.C.

⁸⁸The 1957 SIC combined two industries which were separate in the 1945 SIC; industry 3192, Saddlery, Harness, and Whips, and this industry; the 1958 value of shipments figures for these two industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963 and 1966.

⁸⁹A number of small establishments was misclassified into this industry. This affects the figure for the number of companies but has no appreciable effect on the total value of shipments or the percentage of value of shipments accounted for by the largest companies.

⁹⁰Comparable data are not available because of significant changes in the 1947 classification of plants or products in this industry.

⁹¹Data for 1972 are not directly comparable to earlier data due to a significant revision in the 1972 SIC system. Insulation materials containing asbestos, which were previously classified in industry 3293, are now included in this industry. However, the degree of change, based on total employment, is estimated to be 4 percent.

⁹²Revised percentages not available.

TABLE 5. Share of Value of Shipments Accounted for by the 4, 8, 20, and 50 Largest Companies in Each Manufacturing Industry: 1972 and Earlier Years—Continued

Footnotes for table 5--Continued

⁹³Although the SIC number and title of industry 3293 are unchanged, the 1972 definition of this industry has been revised from that used in the 1967 SIC manual. Molded packings and seals, except plastics (formerly classified in industry 3069), axial mechanical face seals (formerly in industry 3599), plastics packing and seals (formerly in industry 3079), and leather packings, oil and grease retainers, including seals (formerly in industry 3121), are now included in this industry. Also, insulation materials containing asbestos, which were previously classified in this industry, are included in industry 3292 for 1972.

⁹⁴The value of shipments for this industry totaled \$23,947 million in 1972. These values, however, include duplication in that the products of some establishments are used as materials by others. A specialization ratio computed on the basis of net value of shipments (adjusted for estimated cost of coke used as fuel) would approximate 94 percent for 1972, 1967, 1963, and 1958. Although, a coverage ratio cannot be computed precisely, it would exceed 83 percent for 1972, 84 percent for 1967, 86 percent for 1963, and 84 percent for 1958.

⁹⁵Industry 3312, Blast Furnaces and Steel Mills, has been redefined since 1954 to include industry 3311, Blast Furnaces; industry 3312, Steelworks and Rolling Mills; industry 2931, Beehive Coke Ovens; and industry 2932, Byproduct Coke Ovens. For 1954 and 1947, value added by manufacture and shares accounted for by the largest 4, 8, and 20 companies have been recomputed on a basis comparable to later years.

⁹⁶This ratio is based on shipments of primary products only by this industry. However, some of these products are also primary to one or more other industries.

⁹⁷This industry includes, in addition to commercial (jobbing) foundries, "captive" foundries at separate locations producing gray iron castings for other plants of the same company. Accordingly, the ratios for this industry do not reflect the market shares in the commercial foundry industry as such.

⁹⁸Ratios not meaningful because total value of primary products shipped include a significant amount of duplication.

⁹⁹Comparable data are not available due to significant revisions in the 1954 classification of plants or products in this industry.

¹⁰⁰Comparable data are not available because of significant changes in the 1947 classification of plants or products in this industry.

¹⁰¹Indexes not meaningful because of large miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others. Such receipts are treated as primary products for this industry.

¹⁰²A number of small establishments was misclassified into this industry. This affects the figure for the number of companies but has no appreciable effect on the total value of shipments or the percentage of value of shipments accounted for by the largest companies.

¹⁰³The 1957 SIC combined in this industry three industries which were separate in the 1945 SIC: industry 3422, Edge Tools; industry 3423, Hand Tools, N.E.C.; and industry 3424, Files. The 1958 value of shipments figures for these three industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963 and later years.

¹⁰⁴This industry was revised for 1972; historical data are tabulated under the old definition and are not directly comparable. Warm air furnaces (old product class 34332) and parts and attachments for warm air furnaces (old product code 34336 73) are classified in industry 3585, Refrigeration and Heating Equipment.

¹⁰⁵This ratio is based on shipments of primary products only by this industry. However, some of these products are also primary to one or more other industries.

¹⁰⁶Revisions were made to this industry for prior years to include automobile stampings plants operated by automobile producing companies. Concentration ratios cannot be published for prior years on a revised basis without approximating the operations of individual companies.

¹⁰⁷Indexes not meaningful because of large miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

¹⁰⁸Comparable data are not available for 1970 and earlier years.

¹⁰⁹Farm wagons, trucks, and other farm transportation equipment previously classified in industry 3799 (Transportation Equipment, N.E.C.) are now included in this industry for 1972. The effect of the change on this industry is approximately 5 percent of the total value of shipments for 1972.

¹¹⁰Not completely comparable to 1966 and earlier years, some companies included construction receipts with value of shipments for those years. Such receipts are excluded in 1967.

¹¹¹For 1972, the content of this industry has been slightly changed by the inclusion of automatic stacking machines and parts and attachments. The effect of this change on the industry is approximately 5 percent. These products were formerly classified in industry 3537.

¹¹²Comparable data are not available for 1966 and earlier years because of significant changes in the 1967 SIC system of plants or products of this industry.

¹¹³Separate data cannot be published for this industry, Typewriters, without revealing the operations of individual companies. Accordingly, this industry has been combined with industry 3579, Office Machines, N.E.C., for 1972.

¹¹⁴Comparable data are not available for prior years as this industry was not separately identified prior to 1967.

¹¹⁵Ratios not meaningful because total value of primary products shipped include a significant amount of duplication.

¹¹⁶For 1972, data for coin-operated washers and dryers under 10-lb. load, and parts and attachments for these products have been moved to industry 3633, Household Laundry Equipment. Products shifting out of this industry represent approximately 15 percent of the total shipments value at the United States level.

¹¹⁷Comparable data are not available due to significant revisions in the 1954 classification of plants or products in this industry.

¹¹⁸Comparable figures not available. Ratios were calculated originally on value of shipments in 1954 and 1947. 1954 ratios for the largest 4 and 8 companies have been recalculated based on value added; 1947 ratios based on value added are not available.

¹¹⁹Prior to 1967, industries 3711 and 3714 were combined and identified as industry 3717.

¹²⁰Data for 1966 and 1963 have been revised by the exclusion of automotive stamping plants operated by automobile producing companies; as a result of this revision, these plants are now classified in the metal stampings industry (SIC industry 3465).

¹²¹Not completely comparable to 1958 and later years because of a change in the SIC system. In 1958 and later years an establishment manufacturing complete aircraft was classified in industry 3721, Aircraft, if its value of work done on aircraft exceeded its value of shipments of any other single industry's products. In 1954 and earlier years any establishment manufacturing at least one complete aircraft was classified in industry 3721.

¹²²Value of shipments, rather than value of work done has been used in this industry since 1970.

¹²³Value of work done rather than value of shipments.

¹²⁴Data include aircraft propellers and parts, classified in industry 3723 prior to 1967.

¹²⁵Industry 3741 is combined with industry 3742 to avoid disclosing the operations of individual companies.

¹²⁶This industry was revised for 1972; historical data are tabulated under the old definition and are not comparable. Farm wagons and other farm transportation equipment (1967 product class 37992, part) were reclassified to industry 3523. Other Automobile Trailers (1967 product class 37991, part) were reclassified to industry 3792; self-propelled golf carts, classified in this industry prior to 1972, were reclassified into product class 37997.

¹²⁷Industry 3821, Mechanical Measuring Devices, in 1967 was split into three industries; 3823, Process Control Instruments; 3824, Fluid Meters and Counting Devices; 3829, Measuring and Controlling Devices, N.E.C.

¹²⁸This industry and 1967 industry 3831, Optical Instruments and Lenses are not directly comparable; also this industry is a combination of two 1967 industries: 1941, Sighting and Fire Control Equipment and 3831, Optical Instruments and Lenses. No 1967 concentration data was published for industry 1941. However, from the final industry Bulletin MC-72(2)-38A, table 1C, it can be seen that 4 percent of the total value of shipments for this industry in 1972 came from 1967 industry 1941.

¹²⁹Data for 1972 are not directly comparable to earlier years data due to a significant revision in the industry's SIC system. Broad-tipped markers, formerly in industry 3953 (product code 39530 43), are now included in industry 3951 (product code 39510 43). However, the degree of change (based on total employment) for industry 3951 and industry 3953 are 6 percent and 8 percent, respectively.

¹³⁰Data for 1972 are not directly comparable to earlier years data due to a minor revision in the industry SIC system. Data for embalming chemicals are now included in industry 2899, Chemical Preparations, N.E.C.; burial garments in industry 2389, Apparel and Accessories, N.E.C.; and innerliners, sold as such, in industry 2399, Fabricated Textile Products, N.E.C. However, the degree of change (based on total employment) is less than 1 percent.

¹³¹The 1967 SIC combined into this industry six industries which were separate in the 1957 SIC: industry 3983, Matches; 3984, Candles; 3987, Lamp Shades; 3992, Furs, Dressed and Dyed; 3995, Umbrellas, Parasols and Canes; and 3999, Miscellaneous Products, N.E.C. Concentration ratio data are not available for 1966 or prior years.

TABLE 6. Share of Value of Shipments of Each Class of Product Accounted for by the 4, 8, 20, and 50 Largest Companies: 1972 and Earlier Years
